Constructing the Military Landscape: the Board of Ordnance Maps and Plans of Scotland, 1689–1815

Index of Maps and Supplementary Appendices

Introduction

This volume contains a complete index of the Board of Ordnance military maps of Scotland c.1689–1815 that have formed the basis to my study. This union-listing provides, for the first time, an aggregate listing of the cartographic records currently held in different archive repositories across Britain: in sum, 940 military maps of eighteenth-century Scotland.

The volume is organised into three parts: introduction, main index, and supplementary indexes and concordances. The introduction considers the scope of the union-listing and its principles, and describes the format of four indexes used: the main, institutional, index of the maps; a chronological index; an alphabetical index of engineers, draughtsmen, and surveyors; and concordances. The indexes themselves then follow.

Scope of the Union-Listing

This union-listing includes the cartographic materials that were compiled by the Board of Ordnance engineers, draughtsmen, and surveyors to variously represent the military landscapes of eighteenth-century Scotland, whether built, in the process of being built, or proposed. The material ranges from relatively small-scale topographical maps of the whole country to medium-scale maps of military route ways and large-scale architectural and engineering plans, sections, and elevations of forts, individual buildings, and features of defence.

The format of the materials—that is, they are primarily manuscript—reflects the nature of the maps as confidential documents and the importance of mapping to state governance. Where printed materials have been included, for example John Elphinstone’s Mercator’s Map of North Britain, the reason rests with contemporary indications of the maps’ military utility, often shown by subsequent additions of manuscript annotations:
David Watson, for example, marked the routes of military roads and locations of camps, barracks, and defensive posts on printed copies of Elphinstone’s map.\footnote{BL Maps K.Top.48.17–21; TNA MPF 1/247.} Maps of battles were printed contemporaneously as a form of cartographic journalism which increased their public circulation beyond the bounds of state and military, promoted the ideology of heroic victory and, in the process, formed an effective tool of government propaganda (see Volume 1, chapter 7, pages 275–328).

The majority of maps included were made under the auspices of the state or used by the state for political and military objectives in Scotland. There are a few instances when maps are included less for their immediate eighteenth-century military utility than for the lessons they could teach military cadets. Seven of the maps, for example, record former military landscapes—Roman camps and posts at Dalginross, Annandale, Strageath and Ardoch—drawn by William Roy in 1752 and 1755 as part of his antiquarian interests.\footnote{BL Maps K.Top.6.5., Maps K.Top.49.54.2., Maps K.Top.49.54.3., Maps K.Top.50.79.2.a., Maps K.Top.50.79.2.b., Maps K.Top.50.79.3., and Maps K.Top.50.83.3. A complete set of antiquarian plans was presented as a volume to George III in 1774 by William Roy, now BL King’s MS 247–248. See also NLS: http://www.nls.uk/maps/roy/antiquities/index.html} Although representations of former landscapes Roy’s interest in the military antiquities of the Roman conquest of Scotland had analogies with the Hanoverian conquest of the mid-eighteenth century. He was of the view ‘that what, with regard to situation, was an advantageous post when the Romans were carrying on their military operations in Britain, must, in all essential respects, continue to be a good one now’.\footnote{Roy 1793, p. i.} Roy was not the only military engineer to display an interest in Scotland’s landscape for other than purely military reasons. Paul Sandby, principal draughtsman on the Military Survey of Scotland, his brother Thomas, and John Elphinstone, an Ordnance Practitioner Engineer, produced Scottish landscapes and views of Scottish castles for the Duke of Cumberland.\footnote{For example, Thomas Sandby: BL Maps K.Top.49.23.b. (Glamis Castle), RLW 14724 (Fort Augustus); Paul Sandby: BL Maps K.Top.49.54.1.c. (Drumlanrig); John Elphinstone: BL Maps K.Top.48.22. (Edinburgh, Dumbarton, Stirling and Blackness Castles), Maps K.Top.49.23.a.3–6 (Glamis Castle), Maps K.Top.49.74.c. and K.Top.49.73. (Edinburgh Castle), Maps K.Top.49.86. (Palace of Falkland), Maps K.Top.50.37.1.a–e (Fort William environs), and Maps K.Top.50.96.f.1. (Stirling Castle).} These have been included in the union-listing because they provide a snapshot of the military landscape of Scotland during the last Jacobite rebellion of 1745 and because they are Board of Ordnance materials.

The listing fields—themes, people, places, and descriptions—support established repository search requirements as well as offering a means to analyse the archive. Each of the generic fields contributed to the construction of Scotland’s military landscape. Themes
include forts, roads, battles, coastal charts, and information on the clans; people highlight the
engineers, draughtsmen, and copyists at work on the military maps of Scotland; places offer
insight into the areas of greatest concern to the British government; and descriptions of the
maps allow us to understand how state map makers reconstructed the landscape on paper and
indicate the resources available to do so.

The Format of Description

My main aim was to make the entries readily understandable without need for frequent
recourse to explanation of the conventions used. The main index, ordered by institution,
forms the major part of this volume, and has the most complete information for each entry.
The supplementary indexes are included to identify items by alternative means: by year, map
maker, and Board of Ordnance reference. What follows offers a general description of the
indexes and the fields that describe the maps.

Description of the institutional index

The institution—the maps’ current repositories—form the first division of the index followed
by alphabetically and numerically ordered shelfmark. Where a shelfmark is repeated, for
example for inset maps, the principal order is alphabetically by place or by folio if part of a
volume set. This index is principally a bibliography of the references made to maps in
Volume 1 and more since it includes all the maps in the surviving archive. Future work will
involve re-arranging the content of this index to form a geographical index sub-divided into
primary maps and their copies. Recognition of particular maps, their form and allusions to
function will be enhanced by thumbnail images for nearly all the entries.

Figure 1.1 illustrates an entry in the institutional index, identifying the divisions into
the several descriptive fields. After the shelfmark, the first information included is the
superseded shelfmark or a reference to the document from which the map was extracted;
both references provide some information on the provenance of the map. Superseded and
extracted shelfmarks generally apply to the (British) National Archives holdings and refer to
an original War Office referencing system (for example, WO 78) or State Papers (for
example, SP 8/16), and to material held in the Royal Library at Windsor Castle where the
reference relates to the map’s original identifier in the King’s Military Collection (for
example, K.Mil.XV.33). The Board of Ordnance code—B4F46 here—is a concordance with
the entries listed in the Office of Ordnance’s Register of Draughts. An identifying number follows but has little relevance in the use of this index as it is. The map title is as it appears on the map, including spelling, capitalisation, and punctuation. Any additional information interpolated by me or extracted from an online or printed catalogue appears inside square brackets.

Compass indicator, with north to the top, and rhumb lines. Also see MPHH 1/199/2.

Figure 1.1 An example of an entry in the institutional index

The next field provides the name of the engineer, draughtsman, and/or surveyor involved in making the map is given. If his role is known, that role appears in parenthesis, abbreviated to Eng. (engineer), DM (draughtsman), and CP (copyist). Other roles, such as architect or storekeeper, appear if they are known. Many of the maps remain unsigned; where an engineer or draughtsman can be assumed to have been involved at some stage of the map’s making, their name is added in square brackets, occasionally with a question mark to indicate a level of uncertainty. The year the map was compiled and/or copied is rectified to match the new style or post-1752 Civil or Legal year. Scale is indicated as a metric representative fraction and is a conversion of yards, feet, furlongs, and chains noted on the maps. At the Act of Union in 1707, English measures were introduced into Scotland but did

---

5 TNA WO 55/2281.
6 Pre-1752, the Civil or Legal year began on 25 March and some of the maps carry an 'old style' date, for example, 1714/15. Once rectified, the new style date is 1715.
7 Representative fractions include 1: 63,360 where 1 inch on the map is equivalent to 1 mile on the land; 1: 240 for 1 inch on the map representing 20 feet; 1: 360 for 1 inch to 30 feet; 1: 480 for 1 inch to 40 feet; etc.
not entirely displace the old Scottish measures. Some maps include Scottish miles, equivalent to 1.1 English miles or 1.8 kms. Dimensions are given to the nearest millimetre, measured between neat line and then sheet edges, or between sheet edges only, top-to-bottom then left-to-right. Place (alphabetical if a shelfmark is repeated) is followed by county. Contemporary county names, for example Edinburghshire, are used throughout. Notes are made up of annotations regarding a range of information, from contemporary references such as this record of the map’s inclusion in a letter to William Skinner, to data on the physical condition of the map if this is not obvious from the image, to any reference to provenance, dedications, and relationship to other maps if again not immediately obvious from its place in the listing. This information has been compiled from a number of sources including the maps themselves, and published and online catalogues.

This arrangement and the content of the entries are designed to convey as much relevant information as possible. In some instances, these designs may not always work and so supplementary listings are included to cover any possible shortfalls. The layouts of the chronological and alphabetical listings and concordances are now briefly described.

Description of the chronological index

The index is ordered systematically by year, once again rectified to the post-1752 civil or legal year. The many undated maps appear at the end of the index. For each year, entries are brief and include the shelfmark (unique number) of the map, the map maker and any associates, then county and place. These last two form the secondary order beyond the chronology, the final order conforming to year—county—place.

Description of the alphabetical index

The order is alphabetical by map maker, with their role—engineer, draughtsman, copyist—included where known. The index begins with maps that have no designated maker. Any interpolation made about a maker or any associated personnel appear in square brackets and are placed in alphabetical order within the body of the index. As with the chronological index, entries are brief and include shelfmarks, county and place, with secondary order established by county then place.

Description of concordances

In this index, concordances are given for the eighteenth-century Board of Ordnance codes.

393  [The Military Survey of Scotland: the fair copy of northern Scotland]

Name:  Roy, William (Eng.); Watson, David (Eng.)
Year:  1747–1755
Scale:  1: 36,000  Dimensions:
Place:  Scotland
County:  Scotland
Notes:  Holding note: The fair copy, orientated to magnetic north. Originally in 12 rolls (1–11 finished, one unfinished and unnumbered). In David Watson’s possession until his death in 1761, when it entered the King’s Library; lent by the King to Roy after 1763; in 1793 returned by David Dundas to the King’s Library. Between 1829 and 1844, the 12 rolls of this map were combined with the 10 rolls of map ‘c’, and all remounted as 38 sheets of unequal size which are contained in eight cases. Together they form a very large and highly finished coloured military survey of the kingdom of Scotland, exclusive of the islands, undertaken by order of William Augustus, Duke of Cumberland, and executed by Lieutenant (afterwards Major-General) William Roy, and other officers, under the superintendence of Lieut.-Col. David Watson, Deputy Quarter-Master-General of the Forces, in the years 1747-1755 drawn on a scale of about two inches to a mile.

Year: 1708
Scale: 1: 1920 Dimensions: 394 x 603 mm., on sheet, 408 x 619 mm.
Place: Stirling Castle
County: Stirlingshire
Notes: Scale for the profile is 1: 240 (20ft to 1in., 6.096m to 2.54cm). Main title caption: 'A Plan of Sterling Castle, as here Colour’d in Red lines, and the Black is a Design for better Fortifying the Entrance of the same, done by Capt Dury one of her Majesty's Engineers Anno 1708. OBSERVATIONS. It being a General Rule in all Fortifications that no part of a Fortress where accessible and may be attacked, but the same should be discovered from within the place, that the Garrison may fire upon any that may lodge under the outside of the Walls: otherwise where none can see, there will be much danger of Surprize or Mining. Now this Design having no Flank to clear the Gate & Entrance at A, which places are commonly double guarded, is therefore very improper & destroys all rst of the Design, were there no other faults, which are corrected so far as the new wall permits that is already built by Capt Dury mark’d 1, 2, 3, 4 and another Design made to join that work by Talbot Edwards, her Majesty's Second Engineer'.

1039 [Arniston]

Name: Roy, William (Eng.)
Year: ca.1755
Scale: 1: 36,000 Dimensions: 547 x 383 mm.
Place: Arniston
County: Edinburghshire
Notes: Part of Dundas private collection (photostat copy at NAS RHP5246/1). Dalkeith is at the top of the sheet, Clevehill near the bottom (also Brockhouse); centred on Arniston. On verso: 'This Plan dawn by General Roy and given by him to Lord President Dundas, some time about the year 1755. Plan of the Battle of Culloden 16th April 1746

Name: Sandby, Thomas (DM)
Year: 1746
Scale: [1: 14,400] Dimensions: 320 x 425 mm.
Place: Culloden
County: Inverness-shire
Notes: BL microfiche no: 302/1. Endorsed: T. Sandby delint. April 23 1746 at Inverness. MS. Pen and watercolour, with key and additional data below, folded and torn before mounting. This plan shows marked similarities in design and content to Dugal Campbell's map (730026 / K.Mil.X.26) and due to their dates of service (Sandby was with the Duke in April, Campbell in May), it is likely Campbell copied Sandby's plan.

Name: Schultz, [Henry]
Year: 1746
Scale: [1: 14,400] Dimensions: 380 x 457 mm.
Place: Culloden
County: Inverness-shire
Notes: BL microfiche no: 301/4. [By Henry Schultz? Died 1749? Ref made to him in WO 47/34 f.295v 17 Oct 1749, giving first name but may be a Clerk]. See RLW 730026 and 730027 for a neat drawing and a published account respectively of this plan, although 730025 shows more battle preliminary information: A - the Army on its march in 4 Columns & forming in order of Battle; B - The March of the Army in Order of Battle. The columns identify each of the corps of troops making up Cumberland's army.
Plan of the Battle of Culloden 16 April 1746

**730026**

Name: Campbell, Dugal (Eng.)
Year: 1746
Scale: 1: 14,400  
Dimensions: 209 x 418 mm., on sheet 358 x 468 mm.
Place: Culloden
County: Inverness-shire
Notes: BL microfiche no: 301/5. This plan shows marked similarities in design and content to Thomas Sandby's map (17177 / K.Mil.X.28) and given the dates of their service with the Duke of Cumberland (Sandby was with him in April; Campbell joined him in May), it seems likely that Campbell copied Sandby's plan. It seems to be a 'neat' copy of 730025 / K.Mil.X.25 but showing less of the preliminary army marching positions of 730025.
