

# Appendix E: Bessel Function Convolution Program

Fully commented version of the Bessel function convolution program of chapter two (FORTRAN 77).

```
PROGRAM TRUESPIKE
REAL BESSMOD(30,-10:10) !Absolute values of Jn(x) for 10 arguements.
REAL RBESS(30,-700:700),IBESS(30,-700:700)
REAL RUNIT(30,-700:700),IUNIT(30,-700:700)
REAL A(30),PHI(30) !.....!Amplit. and phase of
!30 Fourier Coeffs.
INTEGER GAMMA,GMAX,SEED
PI=4.0*ATAN(1.0)

C.... GMAX is highest spectral position reached, taken to be 700 here.
C.... GAMMA denotes which delta-fn of unit comb is point of observation.
GMAX=700

CALL RANDOM(CLOW,CHIGH,A,PHI,NMAX) !.....!Select Fourier Coeffs.

C.....Each comb has to begin with a complex value at each delta-fn due to
C.....the i^Mn multiplier but also the exp(Mn * PHI) from the phases of
C.....each Fourier Coefficient.
CALL BC1(A,PHI,RBESS,IBESS,BESSMOD)!.....!Initialise the Bessel
!.....!combs with their REAL
!.....!and IMAG. parts.

C.....First initialise the fundamental comb with its REAL (RUNIT) and
C.....IMAGINARY (IUNIT) parts:
DO 100 GAMMA=-6,6,1 !.....!Move along comb orders.
    RUNIT(1,GAMMA)=RBESS(1,GAMMA)
    IUNIT(1,GAMMA)=IBESS(1,GAMMA)
100 CONTINUE

C... Now compute convolution of unit-spaced comb with the Mn comb.
DO 500 N=2,NMAX !.....!Convolve with next comb:
DO 450 GAMMA=-GMAX,GMAX,1 !.....!Move point of observation:
    DO 400 Mn=-6,6,1 !.....!Orders of N-comb:
        M1=GAMMA-(Mn*N) !.....!Order of unit comb where
        !.....!N-comb sits.
        IF (ABS(M1).GE.GMAX) GOTO 400!.....!Cannot sit at frequency not
        !.....!yet created by process:

        AA=RUNIT(N-1,M1) !.....!Real part of unit comb amplitude.
        BB=IUNIT(N-1,M1) !.....!Imag. part of unit comb amplitude.
        XX=RBESS(N,Mn) !.....!Real of N-comb amplitude
        YY=IBESS(N,Mn) !.....!Imag. part of N-comb amplitude.

        BIT=((AA*XX)-(BB*YY)) !.....!Real part of complex
        !.....!multiplication.

        RUNIT(N,GAMMA)=RUNIT(N,GAMMA)+BIT !Add REAL additional amp.
        !to total REAL amplitude there.

        GIT=((BB*XX)+(AA*YY)) !.....!Imag. part of complex
        IUNIT(N,GAMMA)=IUNIT(N,GAMMA)+GIT !Add IMAG additional amp.
        !to total amplitude there.

400      CONTINUE
450      CONTINUE
500      CONTINUE

CALL SPECTLIST(A,RUNIT,IUNIT,NMAX) !.....!List Spectrum to file.
```

```
