Drawn into Worship: A Biblical Ethics of Work

Jeremy H. Kidwell

Doctor of Philosophy
The University Of Edinburgh, School Of Divinity
2013
Abstract

In the 20th-century, the advent of Taylorism led to a radical reconceptualisation in the organisation of human work. The formal scientifically-conceived aim of increased “efficiency” behind this project masked the moral and psychological changes which were also inherent in the project which is still ongoing. Now, at the turn of the 21st century, given the profusion of corporate scandals and the complicity of unscrupulous business practice in the current ecological and economic crises, researchers in a number of fields focused on work and its organisation have begun to warm to the possible relevance of religious ethics to social responsibility in business practices, offering some promise for a new rapprochement. In this dissertation, I offer a close study of the biblical texts that have nourished a moral vision of work for Christian and Jewish communities. I seek to nuance my study of these texts in Hebrew and Greek with an agrarian sensibility in order to highlight the moral vision of human / non-human interaction in the forms of work described and the ecological sensibility which undergirds this ancient vision of “good work” which is preserved in these texts.

More specifically, I explore the moral relationship between work and worship through a close study of two related themes. In Part 1, I begin with a sustained look at the details of “good work” as narrated in the Tabernacle construction account in Exodus 25-40. This study of Exodus provides a platform upon which to explore work themes of volition, design, tacit knowledge, and interaction between the sociality and agency of work. In subsequent chapters, I go on to analyse subsequent temple construction accounts in 1 Kings, Jeremiah 22, Isaiah 60, Zechariah 14, 1-2 Chronicles, and across the New Testament. In this deliberately intertextual study, I attend to the transformation of the meaning of the Tabernacle/Temple across the Hebrew Scriptures and New Testament, as temple building texts in particular assume an eschatological aspect. My study of these subsequent construction accounts also adds nuance and texture to my account of moral making in conversation with several contemporary theorists, particularly with regards to work agency, aesthetics, sociality, skill and wisdom, and the material culture of work. This section culminates with the conclusion that in the New Testament, the church becomes both the product and the site of moral work building a new “temple”.

Following this conclusion, in Part 2 of the dissertation, I develop a more detailed account of the relational dynamic between work and worship as it is delineated in Hebrew and Christian offertory practice. For this study, I turn to close readings of offertory practices in the Hebrew Scriptures (with special focus on Leviticus 1-3 and other Pentateuchal offertory texts), the New Testament and early Christian (1-4c.) moral philosophy. I highlight the relationship between worship and work in these liturgies and argue that in their practical logic, work is “drawn into worship.” In particular, I argue that three aspects of offertory practice may provide a framework for rehabilitating contemporary worship so that it may once again draw work into a morally formative dynamic. These three aspects correspond to the material and practised details of specific offerings and include: (1) the relativisation of utility with the burnt offering (2) the engagement of work quality and aesthetics through consecratory firstfruits offerings and (3) the sociality of liturgical work with
the shared meal in the peace offering. These texts and the early Christian practices through which their liturgies were deployed hint at possible avenues for a rehabilitation of the moral work life of contemporary Christians. I argue that the proper performance of worship must “draw in” and engage the ordinary work of the people of God, and that a rehabilitation of offertory practice, particularly in light of the rich range of practices demonstrated in the Christian tradition offers a promising place for the reconceptualisation of work.
Declaration

I, Jeremy H. Kidwell, declare that this dissertation has been composed by me, that the work is my own, and that it has not been submitted for any other degree or professional qualification.

Acknowledgements

I am in the debt of faculty and friends at the University of Edinburgh who have provided comment on the research and writing presented here, particularly Dr. David Reimer who has ably steered me through the “Scylla” and “Charybdis” churning up the waters of biblical scholarship and my two examiners Dr. Nick Adams and Prof Timothy Gorringe who offered a generous measure of the same type of guidance from a theological perspective. I am also grateful to Prof Oliver O’Donovan for sharing wisdom on Patristic ethics and to he and Prof Jolyon Mitchell for their advice provided in the early stages of this project. Portions of this study have been presented at several conferences, including a Society for the Study of Christian Ethics conference, several SBL sessions (Biblical Theology, Concept Analysis and the Hebrew Bible and the Theology of the Hebrew Scriptures sections), a Kirby-Laing Institute for Christian Ethics seminar, the Tyndale House forum on Theology and Social Ethics and several University of Edinburgh research seminars. I am very grateful to those who have shared insights and critique in the context of those fora. Special thanks also go to a group of peers, Graham Chernoff, Seth Ehorn and Joe Rivera who performed a final reading of my dissertation. I am also specially grateful to Ben Edsall for commenting on earlier drafts of several sections of this work. Any persistent faults in this manuscript are mine as their diligent attention cannot be faulted! This research was financially supported by the University of Edinburgh and the School of Divinity at the University and my research has been attended by a regular awareness that I am the beneficiary of an investment by the Scottish public in scholarship. I hope that this study may prove a small but worthy dividend of this generous gift.

It has been a privilege these past three years to be mentored by my doctoral supervisor, Michael Northcott. His personal investment in my professional development and well-being has been extraordinary as he has generously opened up office, home and garden as spaces for friendship and learning. Perhaps most of all, I am grateful to Professor Northcott for allowing me to be an apprentice in the challenging task of prophetic witness in the midst of our ecological crisis. He has left me with the conviction that our efforts to communicate a moral vision for the health of the whole creation must be not merely true but also beautiful. It might have been easier to provide specific footnotes for those insights in this dissertation which have not arisen from our conversations, his mentorship, and my reading of his work (including my use of the term “Moral Making” for Part 1 of this study). Keeping this
in mind, I offer my deepest thanks to Professor Northcott for sharing his insight and scholarship with me so openly.

Final and ultimate thanks go to my wife Katy for her patience, encouragement, and unfailing support which words do not do justice. The conviction which lies behind this research—that communities of faith may yet mobilise towards moral action and change society for the better in the midst of our current ecological crisis—is one which I could not have sustained without frequent borrowing from Katy’s hope and vision on this subject. Thanks are also due to our son Noah whose enthusiasm and joy which have infused a new level of hope on my part towards the development of an intergenerational ethic.
A note on the text

In seeking to make this dissertation accessible to both readers and non-readers of biblical languages, when referencing the text of the bible, I will primarily provide Hebrew or Greek (and in some cases Latin, when relevant) and I will include transliteration and gloss (when uncontroversial, in quotes) enclosed in brackets (i.e., נדבה [ndava="freewill"]). Glosses are typically drawn from BDAG and HALOT and quotations are drawn from contemporary English translations: the JPS translation for the Hebrew Bible and the ESV for the New Testament, otherwise, unless noted, glosses and translations are my own.

Abbreviations

When referencing ancient and patristic literature, I will make use of the abbreviation system detailed in the Oxford Classical Dictionary with author names unabbreviated (i.e., “Aristotle, Pol.”). I rely upon SBL style for all biblical abbreviations and references.

Introduction

If we hope to see a world in which people are active participants rather than passive consumers and spectators, then somehow we have to rescue the idea of work as something worthwhile, something if not enduring, then deeply humanising. But this implies changes in our attitudes to work and our understanding of its content: what work is and what work could become.¹

1. The Problem of Work

Prior to my academic training in theology and ethics, I once worked as the supervisor of a small team of technicians in a call centre that provided support for customers of a telecommunications company in the United States. We primarily helped users who were mostly owners of small businesses address issues with their internet services, though we also dealt with a host of other less frequent issues including network security. Our workspace had an open layout which was meant to help make our work collaborative. Every day we served as one another’s audience for what were often great feats of communication and imaginative troubleshooting with persons and devices which we would never encounter in any physical sense.

The lack of civility offered to these technicians was frequently astonishing to me, and the negative psychological impact of their treatment was compounded by a style of management which tracked technician productivity in purely mathematical terms. Their performance was assessed based upon metrics such as the number of cases closed each day, call length, trouble recurrence, and hold time, usually at most on a weekly basis. In my experience this is far from exceptional and such an arrangement serves as the style of management for thousands of people who work in support teams such as this. Yet, as a supervisor, I always found that these stark numbers never managed to grasp at the unique and often impressive level of technical skill

that each person cultivated in spite of a work environment which was often oppressive (in spite of the best efforts of managers and executives) and where training was at best *ad hoc*.

This was not my first time doing work where the client relationship was almost exclusively “virtual,” as I have also—since the very early days of commercial internet use—created and managed virtual worlds for various clients. To this end, I have designed and managed servers and network architectures for a number of clients which included several educational institutions. Here too arose strange quandaries and as a consultant I often struggled alongside administrators on the design-side to resist the allure of what often proved to be phantom “efficiencies” and on the maintenance-side to extricate devices from workplaces when it was discovered that they rendered communication less effective, work less enjoyable, and successful learning sometimes nearly impossible. As many modern philosophers of technology have suggested, the technology I encountered was no inert or morally neutral object, but rather occupied a phenomenal “cloud” which carried its own culture and allure, and tended to subvert our best intentions to make judgements about its wise use or avoidance. Yet throughout my work in this industry, I have continued to stumble upon a prejudice that the form and content of work did not constitute a moral concern.

I turned to the academic study of ethics and theology in part out of a desire to develop resources for alienated workers: those who developed skill and offered care in spite of infrastructures and industries which undermined such attempts. It was also my hope that I might identify resources which might provide a better basis upon which to empower frustrated managers who were forced to manage these work-environments rather than improve or alleviate them. The moral quandaries that I experienced seemed to me to be at least in part a failure of imagination and it was my hope that I might be able to illuminate alternative ways of managing and performing work that might prove more edifying. Yet I soon discovered that what I thought to be mere procedural issues were embedded in more substantial problems in Western political economy. It was quickly apparent that attempts to fine-tune existing structures or to offer workers a therapeutic balm, though helpful, could not provide a truly substantial basis for improvement. These issues of worker dissatisfaction were rooted in a deeper malaise which revealed far broader consequences that were not

---

merely human but in a more encompassing sense, disastrous for the whole created order. Too often, our work seems to be a hard-driving engine with no one at the wheel. I arrived at the conclusion that these problems were rooted, at least in part, in the attempt to organise and conduct work “scientifically.” In order to argue that the form and content of our work is a moral endeavour, a reconceptualisation of work is necessary which can restore it to those theological and ecological foundations which had (often cooperatively) provided a moral vision of work for centuries.

In developing this scientific vision of work, over a century ago, late-enlightenment thinkers had distilled a new vision for what was thought to be a rapidly post-Christian culture. Science was to overtake religion in providing coherence and order to daily life and the culture which both undergirded and was generated by our activity as human persons. Human labour, which had been given a moral shape by religion up until this point, was freed from these fetters and given a new organising principle. Into this brave new world, the science of business and management was formalised in the founding of business schools and trade-oriented colleges. Perhaps the most (in)famous expression of the new science of the management of human labour was developed by Frederick Taylor. It is hard to overestimate the impact of Taylor on current work culture, as Robert Kanigel suggests, “‘Scientific management,’ as well as its near synonym, ‘Taylorism,’ have been absorbed into the living tissue of American life.” It is important to note that Taylor envisioned this bringing of science into business not as a way to increase the wealth of a few, but as a way of improving the lives of all. In this way, the Taylorist renaissance provided not merely a new procedural basis for organising work, but also deliberately sought to reconceptualise the basis for moral judgement and the enhancement of human flourishing as a science.

Now, at the turn of the 21st century, workers and managers, particularly those concerned with ethics, find themselves back at the drawing board. Though there remain many scholars who are content with fine-tuning the status quo, many others in social theory and economics have responded with more exhaustive non-religious critiques of modern business structure and manufacturing practice. There is a shared sense of disillusionment with the negative impact of modern labour on human well-being and the loss incurred by the transformations in the constitution of work towards industrialisation and—over the course of the twentieth-century—towards an “information economy.” A number of writers offer biting critique of contemporary

---

work from a variety of perspectives: with regards to worker mistreatment; media and the psychological science of marketing deception; ecological destruction; social injustice; wasteful obsolescence; and lack of function. As these critical accounts suggest, it is easy to find symptoms which attest that the way we make things is ailing from a moral perspective. Given the Enlightenment vision described above, it may have been reasonable at the very least to expect an increase in function of the manufactured goods and yet it seems that ethical quandaries and dysfunction only increase.

In addition to work theorists, many workers and managers are also disillusioned with their scientific task-master and the ways in which human labour has been organised by the application of value-free “scientific” principles. Given the profusion of corporate scandals over the past decade and the complicity of unscrupulous business practice in the current ecological and economic crises, researchers in business ethics have recently begun to warm to the possible relevance of religious ethics to social responsibility in business practice. This new stance also includes a new openness to the validity of normative moral frameworks and even

---

towards religious texts. Though these developments are quite recent, they offer some promise for a new rapprochement. However, if a conversation between business and theology is to be established, there is much work to be done. The long tenure of secular disdain among social theorists for religious ethics in the 20th century has led to a situation where engagement by scholars in business ethics and the sociology of work with religious ethics (with the above examples excepted) are only superficial, leaving few examples of sustained and robust appropriation of what might be considered normative sources for theological scholars. Lamentably, the state of the discourse in Christian ethics and theology also suffers from superficiality. Scholars rarely engage with contemporary research in business ethics, organisational theory, or the sociology of work. Instead, they remain content to recycle theological critiques of macro-economic theory and leave the more specific details of work unexamined, or to offer generically therapeutic motivation for “faith” at work, bypassing any consideration for a robust work critique. As a study by David Miller suggests, this orientation among Christian theologians towards a non-technical audience and the lacunae I detail here may both arise as a consequence of the way the “Faith at Work” movement has almost exclusively oriented theological dialogue about work towards apologetic purposes. As a result, writing in the theology of work tends to offer shallow treatment of its own sources as well, such that one is hard pressed to find a sustained treatment of Scripture or pre-modern theological insight.

In spite of the neglect of the subject of work by scholars in ethics, there is nonetheless a body of literature in which writers and researchers have sought to

---

present normative moral guidance based on theological reflection. Given the long indifference towards normative stances outside Christian circles I have already mentioned above, Christians have developed a self-contained and substantial “shadow literature” on the ethics of business, usually described as the “theology of work”. This is not an insignificant body of writing: there is a 200 page annotated bibliography on the subject, and online storefronts exclusively market written materials and lectures on faith, work, and life integration.9 One of the authors of this bibliographical survey of academic and non-academic writing on work, Pete Hammond, states:

By 2000 there were approximately 350 titles published about the faith-workplace connection, with the first books published in the 1930s. By early 2005, there were over 2000 titles by Christians about the faith-workplace connection, some focusing on leadership and management and other speaking to issues faced by all Christian workers. Since that time this trend has only increased, with more and more publishers entering this category.10

The discourse on the theology of work is not neglected: there is a vast popular literature on the subject which often seeks to appropriate reflection in relation to biblical literature. I would contend that this does not decrease the need for scholarly attention to the subject, but rather calls for judicious attention in discerning both a creative and appropriate frame for the subject which might meaningfully contribute to this literature and address gaps which exist. Part of the lack of scope in the moral vision in both “business ethics” and the “theology of work” is due to the circumscribed nature of these discourses. While I have already noted the boundaries of the theology of work, it is only fair to note that scholarship in business ethics similarly tends to be constrained to organisational management and behaviour. This project is structured deliberately to transgress disciplinary boundaries. The moral vision which I will be expositing from Christian Scripture is applicable to organisational theory and just treatment of workers, but also more unusual suspects. Business is often both an appropriator and generator of its own culture, whether this be modernist design ideology espoused by Apple engineers and contemporary architects, or craft-culture of a small metal shop. Along with individual conduct, corporate organisation and management, culture is an important additional candidate

---

for critical evaluation with regards to the ethics of work.

As this thawing in business ethics indicates, there is new agreement that the golden age of labour promised by the enlightenment will not arrive and the field is open for a re-evaluation of the place of religion and more particularly Christianity as a means by which to grant coherence and moral purpose to human labour. Prominent scholars in theological ethics have voiced the conviction that part of any critical reformulation of modern politics must also involve a reformulation of poiesis. As Pope John Paul II put it in Laborem Exercens, work is “the essential key to the whole social question.”11 Yet the reformulation needed is not generic; what is called for, as Michael Northcott suggests, is an ecological reformulation of work which is rooted in Christian political economy precisely because “the perversion of making is at the heart of the ecological crisis and is rooted in Western political economy.”12 Such a reconceptualisation will serve as my starting point in this dissertation. Keeping this in mind, I turn now to elaborate the specific way in which I intend to draw new insights for work from ancient texts.

2. Work Made Strange: On Using the Bible for an Ethics of Work

At the outset, I suggested that part of the contemporary “problem of work” is due to a subverted moral imagination. In this way, the decline of meaningful forms of work suffers from the professionalisation of knowledge which Ivan Illich criticised for “[making] people dependent on having their knowledge produced for them. It leads to a paralysis of the moral and political imagination.”13 Keeping in mind the widespread nature of the problems with modern work, I would argue that it may not be most helpful to look in familiar places for resources which might provide a basis for the rehabilitation of work, instead it may be the case that modern work needs to be brought into contact with a “strange” world whereby the encounter may awaken us to the true strangeness of what have become all-too-familiar familiar patterns in modern work of destruction, waste, and inhospitality. To this end, in this dissertation, I will seek to examine a “strange” moral world narrated in Christian Scripture through the most sustained account of good work to be found in Christian

11 Pope John Paul II, Laborem Exercens (London: Catholic Truth Society, 1981), §3 “The Question of Work, the Key to the Social Question.”

Scripture: the construction of the place of worship.\footnote{14} This approach which respects the strangeness of the moral world of the bible stands in opposition to what has been the much more regular reflex for modern ethicists reading the bible, who have tended towards Feuerbach’s demythologising reaction to the perceived strangeness of the bible. Examples are wide-ranging, but on this topic, Miroslav Volf’s influential dissertation on work provides an example of a troubling modern response to the “strange”:

A deep divide separates the world of work in biblical times from work in present industrial and information societies. This ever-widening gap precludes developing a theology of work relevant to our time through the “concordance method” without placing biblical references within a larger theological framework. The explicit biblical statements about work are, for instance, more or less irrelevant to fundamental contemporary questions such as the connection between work or unemployment and human identity, the character of humane work in an information society, and the relationship between work and nature in an age of permanent revolution.\footnote{15}

The problem which Volf exemplifies in his approach is the tendency towards a ‘kerygma’ which is abstracted from the actual material circumstances native to the biblical narratives. In this way of thinking, the rich variety of material details preserved in the texts of the bible are a distraction from the more important paradigms they adorn. As I will suggest below in 3.2, I think it is a mistake both to presume such an “ever-widening gap” exists in such a way or to dismiss an account of work with all its richness and detail simply because it exists in a supposedly primitive agricultural context. In contrast, Brian Brock suggests, rightly I think, “it is not our historical or moral distance from the Bible that renders it foreign to us, nor the gap between time and eternity, but the gap between the ways of God and those of humanity.”\footnote{16} This gap is insurmountable and in seeking to neuter the bible of its strangeness, we risk stripping out its theological content because it does not come in the expected forms. Instead, I propose that one embrace this strange world of tents, oxen, and land allotments and see what emerges from that encounter.

One approach to an “alternative world” in which one might seek to inform

\footnote{14} For an account of a similar kind of “hermeneutic of strangeness,” see the recent dissertation in biblical studies focusing on the final-form text for the purposes of ethical reflection, see Jonathan Morgan “Land, Rest & Sacrifice: Ecological Reflections on the Book of Leviticus,” PhD Diss., University of Exeter (2010), 15-22.

\footnote{15} Volf, Work in the Spirit: Toward a Theology of Work, 77. Emphasis mine.

\footnote{16} Brian Brock, Singing the Ethos of God: On the Place of Christian Ethics in Scripture (Grand Rapids: Eerdmans, 2007), xv.
and reshape contemporary contexts through an encounter with the strange has been commended in the context of biblical study by Mary Douglas with her work, *Leviticus as Literature*. In her study of Leviticus, Douglas argues against the liturgical casuistry that has beset other biblical studies which devolve into myopic studies of ritual and item detail: “A strong prohibition on eating warns that the order of sacrifice is being used to demonstrate the boundaries of God’s pattern of the world. Some archetype or paradigm is undoubtedly being developed, and it will not do to reduce the problem by looking for item-by-item meanings.” Though it may seem a curiosity to the modern reader, following this way of thinking, the proper response to a literary encounter with an alternative world is not to construct a catalogue but rather to grasp at the wider contour of the narrative without bracketing out the material significance of these details. Douglas also warns against looking too quickly for motives behind the practices and eliding the distance between the thought-world of the biblical text and the reader. In her case, this functions with regard to sacrifice, though it also applies more broadly to the themes which I will examine below:

Many consider animal sacrifice strongly repulsive, a barbaric custom, only one step away from human sacrifice. The critic says that it may please the butcher to disguise the violence with rites and pretend that the animal consented to its death, but why it is killed makes no difference to the victim. Whether religiously consecrated or unceremoniously dispatched, the deed of killing and the pain of death are the same. Sacrifice is a collusive fraud practised by the priest and congregation for the benefit of their own delicate consciences. Far more honest and dignified is to seek to cause the least suffering to the victim, admitting frankly that the killing is for food.

Though Douglas wants to avoid relativising the moral issue at stake behind such a concern, she suggests that our reading ought to simmer longer in the text before proceeding to a crass psychological analysis: “Starting from here no one is going to understand sacrifice. The assessment of human motives is too immediate, material, and fundamentally secular.” Here we come to a potential problem with Douglas’s approach, as it risks fixing the strangeness of the biblical text in an objective way, as a sort of artefact for sociological analysis. In contrast, I want to commend a reading

20 Ibid., 66-67.
strategy that borrows from the strengths of this approach especially inasmuch as it can offer an alternative to “kerygma” while focussing more on this text as providing paradigms for practices which themselves can be morally informative.\textsuperscript{21}

My point of departure from Douglas will be in my assumption that the content of Christian theology offers a point of continuity between the reader and the text, which cannot be entirely strange to someone who worships and confesses the same God as the Israelites who built the Tabernacle. This sort of theologically shaped entrance into the Hebrew thought-world is set by Margaret Barker:

it is possible to glimpse the “vision”, the “meta-narrative” that is fundamental to the biblical view of creation. The authors of Genesis 1 were probably priests, who began with the vision of creation they had inherited. Their portrayal of an ordered cosmos helped to create one, and their liturgies maintained it. This was the function of any Temple in the ancient near east: it represented the identity of the community and was the epitome of their social order.\textsuperscript{22}

As Barker suggests, the practices of worship narrated in the bible provide a way of comprehending these strange texts. On the basis of this conviction I have structured this study to proceed in Part 2 into an examination of the interaction between worship and work. It is my hope that a closer look at this dynamic may widen our grasp of the moral aspect to the Christian Scriptures that has been greatly neglected by modern Christians.

While I am arguing for a reading of the bible which may bring fresh perspectives to contemporary readers and which celebrates and attends to the alternative world preserved there, it is important that I distinguish my approach here from a reader-response approach such as that commended by Eryl W. Davies in his recent book \textit{The Immoral Bible}.\textsuperscript{23} Along with Davies, I suspect that a scientific approach has done nearly as much harm to study of Christian Scripture as it has to work and consequently I do not intend to interpret the bible in a way such that my conclusions will carry a universal level of normativity in either the liberal or conservative senses: I do not think that Christian Scripture is meant to be received as

\textsuperscript{21} I am synthesising here, in some ways, the approach outlined by Oliver O’Donovan in several monographs, summarised helpfully in Craig G Bartholomew, \textit{A Royal Priesthood?: The Use of the Bible Ethically and Politically: A Dialogue with Oliver O’Donovan} (Carlisle, Cumbria: Paternoster Press, 2002); and the approach commended by Brian Brock in \textit{Singing the Ethos of God}.

\textsuperscript{23} Eryl W Davies, \textit{The Immoral Bible} (London: T&T Clark, 2010).
the “command” of God, if this has been construed in order to coerce others in an effort to enforce the moral command which I might “discover” in this study. Neither do I think that it is appropriate, as I have suggested above, to attempt to distill the texts of the bible into universal “commands” or paradigms which can have purchase on the wider culture simply by being so generic as to receive wide appeal.

In his book, *Singing the Ethos of God* (2007), Brian Brock departs from the “modern obsession with method” and instead approaches exegesis as singing, a metaphor which “draws attention to the way an external word can claim human action and affections and thus be internalized as a way of life.”24 He argues that “language worlds, if we enter them, can orient and shape our lives.”25 This establishes exegesis as “an ineradicably social ‘acoustic space,’ within which one learns practical skills of handling and appropriating Scripture.”26 In this account, the most indigenously Christian approach to biblical ethics is not to abstract analogical concepts which can be used to distill the biblical materials for moral reflection, but to practice and explicate a faithful form of communal exegesis which can then inform moral deliberation. Along these lines, Brock argues, “A good book is always better than its summary, and, as such, Scripture cannot be summarized. Nor can the exegetical tradition through which we approach it.”27 Brock’s strategy is not then, to avoid analogies altogether, but rather to de-emphasise them as the unifier of Scripture and to redirect attention to the reading by ecclesial community across space and time:

The metaphor of grammar has the advantage of emphasizing the dynamic and interpretative nature of reading and living. We “apply” images but “enact” or “sing” within a grammar; and “singing” draws out much more forcefully the recurring return to the text of Scripture and life that the “application” of “images” does not so naturally emphasise.28

Of some note for this dissertation, Brock suggests that this reading strategy which is “attentive to the nuance of Scripture and the way it links with our experience is best understood as a craft.”29 This is a way of reading Scripture, I would argue, that has

26 Ibid., xiii.
27 Ibid., xiii.
28 Ibid., 251.
29 Ibid., 259. *Emphasis mine.*
provenance in a more ancient form of exegesis. As I hope to demonstrate by this study, the bible simply has more to offer than theological exegesites have suggested by the themes they constantly regurgitate with respect to the topic of work. While I cannot fully take up this task here, keeping this ancient connection in mind, I have sought to strengthen my own conclusions in this dissertation with parallel research in patristic moral reflection and my reflection here will seek to illuminate the text in its ancient and classical contexts.30

I follow Brock and depart ways with Davies in seeking to read the bible for a believing community, with the aim that it might re-aquaint specifically Christian communities with neglected aspects of their Scriptures and the moral implications that these texts may have for contemporary work.31 This is why I will mostly use the term “Christian Scripture” in this study. The philosophy and ethics of work have suffered quite long enough under the “democratized self” as Alastair MacIntyre notes, “This… which has no necessary social content and no necessary social identity can then be anything, can assume any role or take any point of view, because it is in and for itself nothing.”32 My purpose in pursuing an ecclesial reading is, in this way of thinking, not merely a parochial concern, but rather represents intellectual honesty, and following MacIntyre, a form of resistance to those Enlightenment approaches which are so deeply implicated in the contemporary work problems I have already noted. The major consequence of this ecclesial dimension to my reading strategy is my attempt, particularly in Part 2 of this study, to place the task of exegesis in relation to the complex of practices which also compose a substantive part of Christian community.33 Along these lines, following Frei, Michael Northcott argues that we should situate “biblical texts in the ritual and cultural-linguistic settings in which they were written and constructed as ‘Scripture’ or ‘canon’ and in which they have subsequently been read, rehearsed, and interpreted. On this approach, Scripture functions… as a culture-shaping, character-forming genre which

31 Along these lines, see Stephen E. Fowl and L. Gregory Jones, Reading in Communion: Scripture and Ethics in Christian Life (Eugene, OR: Wipf and Stock, 1998).

32 Alasdair C MacIntyre, After Virtue: A Study in Moral Theory (University of Notre Dame Press, 2007), 32.

forms part of the larger set of processes and rituals that together construct moral communities of the kind Christians inhabit.”\textsuperscript{34} It is also important to note that in taking up an ecclesially embedded approach, I do not intend for this study to serve exclusively sectarian ends. Quite to the contrary, I will elaborate below quite a number of ways in which the moral vision here is commensurable with insights developed in the contemporary social theory and business ethics. These insights come from a wholly secular marketplace and share little—at least overtly—of the theological foundation upon which I have sought to construe this account of moral work. However, as a several other scholars in Christian ethics have recently argued, this apparent incommensurability on the level of first principles need not necessarily prevent one from expecting points of engagement. In particular, Luke Bretherton has recently argued in his published dissertation, drawing upon Oliver O’Donovan’s moral philosophy, that we may yet find some \textit{ad hoc} commensurability at the level of practices. He suggests, “despite their distinctive criteria of moral evaluation, when it comes to moral actions and social practices Christians will find themselves enjoying an ad hoc commensurability with their neighbours. This \textit{ad hoc} commensurability is grounded in the reality not only of Christians sharing the same moral field as their neighbours, but also the work of the Spirit breaking the eschatological reality in among all people everywhere.”\textsuperscript{35}

Keeping these hermeneutical considerations in mind, in this dissertation, I will present a partial attempt to rehabilitate resources for a reformulation of the ethics of work through exegesis of Christian Scripture. I will bring this exploration of the primary sources of Christian and Jewish faith into contact with contemporary research in the sociology of work and business ethics and intend to seek out insights for the moral organisation of human labour which may resonate with contemporary business critique by social theorists and offer a profound and robust challenge to scientific work-management on its own terms. I will seek to confront the dichotomies and incoherencies latent in so-called ‘scientific’ management of labour in order to bring into sharper relief the relevance of the moral vision of work preserved in Scripture.

\textsuperscript{34} Ibid., 251.

3. A Method for Synthesising Ethics and Exegesis

Keeping in mind the basic posture which I have outlined above, some comments are in order as to how this will translate into specific methodological commitments. For this dissertation, I have pursued an approach to reading Christian Scripture which can engage with the text of Christian Scripture on its own terms rather than making this encounter with otherness the basis for a truncated or eclectic reading. More specifically, this represents an attempt to respect the integrity of the canonical text in its received form as it has been authorised by Christian communities over the ages. This is something of a departure from the positivistic scientific study of the bible which seeks a detached scientifically objective reading. As John Webster has suggested this may be expressed as a form of textual attentiveness: “what is involved in reading this text is determined by this text.” This attention to the text works out in three practical ways, with my pursuit of a reading which is canonically oriented, agrarian, and theological.

3.1. Canonical Reading for a “Textured” Biblical Ethic

As I have alluded already above, particularly in explicitly Christian literature in the theology of work, the bible is often appropriated in reflection on work ethics, yet lamentably, many writers offer only superficial readings. In a recent dissertation, John Robert Jackson provides a helpful summary of the problems with the use of the bible in this literature:

Studies of work in the Bible have been either brief descriptions of different kinds of workers or theological interpretations of work that employ a limited number of biblical texts as the basis for their constructions. These theologies of work rely heavily on Genesis 1, 2 and 3. Too often these texts have not been contextualized, either historically or textually. The particularity of the social and historical settings out of which they were written has been overlooked, and they have too quickly been interpreted as universal statements about human nature.36

36 John Webster, “Reading Scripture Eschatologically,” in Reading Texts, Seeking Wisdom, ed. David F. Ford and Graham Stanton (Grand Rapids: Eerdmans, 2003), 245-56, 246 cited in Murray Rae. “On Reading Scripture Theologically.” Princeton Theological Review 14.1, no. 38 (2008), 15. As Rae notes, this affirmation that the mode of reading a text should arise out of the object under consideration finds early 20th-century expression by Karl Barth in his Romans commentary and the foundational epistemological claim finds expression later by “the Scottish philosopher John Macmurray, who insisted that the nature of the object must prescribe the mode of knowing” (15). This suggestion has been developed further by contemporary theological scholars including John Webster, Anthony Thiselton, and Kevin VanHoozer.

Even those studies which avoid the latter part of his critique (i.e., lacking contextualisation) often fail to satisfy the former critique regarding scope. Most theologically sophisticated accounts tend to constrain their exegesis to a narrow range of themes (sabbath, toil, etc.) and texts (Gen 1-3, Jubilee laws). These circumscribed appropriations have generated an interesting and often insightful tradition in contemporary Christian ethics which examines the significance of the sabbath law for work38 a selection of biblical legal materials, and the Eucharist.39 Useful and interesting though these appropriations may be, treatment of biblical material within its textual context and development of themes across a wider canonical contour offers the possibility of revealing a wider range of previously unnoticed resources. By tracing these themes across the canonical text, it is my hope that this study may provide a more robustly textured account. Several of the work themes which I develop here—particularly with regards to the relationship between moral work, volition and wisdom—recur across the canon. As I will observe in Part 1 below, difference in the bible does not only occur between similar themes in the HB and NT. In actuality, each text, whether it be Exodus, Kings, Chronicles, Matthew, or 1 Chronicles addresses the same theme—in the case of this study, Temple construction—with a different range of theological concerns and deploys different theological resources based upon genre, occasion, and context. Providing a study which sustains the same theme across a number of texts offers the possibility that we might let each unique voice further augment the “texture” of our larger moral account.

3.2. An Ecological / Agrarian Reading

Having noted in the previous section my commitment to scope, this next strategy attends to the detail of the text. One of the primary concerns that any study of work in Christian Scripture must confront is the apparent mismatch between the agricultural work context of biblical texts and contemporary business. In the former, though this was not exclusively the case, work was nevertheless predominantly agricultural. In contrast, in the present day, agricultural work occupies a much more

---

39 In particular, examples of work as Eucharistic can be found in Jensen, Responsive Labor: A Theology of Work. Northcott, Moral Climate: The Ethics of Global Warming. Esther D Reed, Good Work: Christian Ethics in the Workplace (Waco: Baylor University Press, 2010).
marginal space. A number of writers in the theology of work have elected to affirm this marginalisation of agricultural work in their use of Christian Scripture. In addition to my attempt to provide a textured moral account which draws in several “voices” through an intertextual reading across the canonical text of Christian Scripture, in this dissertation I also mean to grant priority to the strange world of Scripture by performing an “agrarian” reading. What this means is that I will assume, in some contrast with other contemporary writers in the theology of work, that moral reflection on agricultural forms of work may be relevant to the present day work problems I have already noted. As suggested above (p. 8), Miroslav Volf notes his uneasiness (following his doctoral supervisor Jürgen Moltmann) with the cultural distance of the text. What is noteworthy about the approach that Volf outlines in this early book is the assumption that the theological concepts which interpret scripture must be extrinsic to it in order to ensure that the exegetical reflection which ensues is properly relevant to the present moment. In particular, with regards to the subject of work, it is the supposed distance between the largely agrarian society and our present industrialised economies that provides a basis for subordinating the material details recorded in Scripture. I find this subordination of the text to be a troubling starting point as this leaves the encounter with Scripture not as a dynamic encounter, but rather more like T.S. Eliot’s description of J. Alfred Prufrock, like a “patient etherized upon a table.” I note here Volf’s approach to the biblical materials on work because that they reveal a logic of argumentation that is common to the theology of work genre. In contrast to Volf’s approach, I will pursue an “agrarian” reading of Scripture which takes seriously the details of agrarian work and considers the possibility that the contemporary distance between agrarian and industrial (or technological) forms of work may not be the natural consequence of time but may actually represent collusion with the contemporary subordination of “nature” to “techne.”

Failure to conceive of human work in more holistically interrelated (or ecological) terms has been the source of a great moral failure in modern work, as Michael Northcott observes:

In the modern economy of wealth accumulation and waste, this darkening reduction of being to sheer materiality reaches new depths. The economistic neglect of biological laws and of the regenerative ways of ecosystems arises from the exclusive devotion of modern societies to economic above moral or spiritual ends. It represents a misdirected idealism in which the material

---

instruments of modern humanity’s apparent success in tackling poverty and
disease, and in enhancing the arts and intellectual knowledge, have become
the exclusive ends of modern political economy…. This misplaced devotion
comes at a great price in terms of the enslavement of the earth, and of billions
of its creatures, to the aim of wealth accumulation.\footnote{Northcott, Moral Climate: The Ethics of Global Warming, 153.}

As Northcott also argues, this modern conception “which wears down the durability
of the biophysical world and the stability of human dwelling” stands in stark contrast
to the witness of Scripture.\footnote{Ibid., 155.} As I have already noted above, there is a long tradition
which defines the act of human labour by the ways in which we distinguish ourselves
against nature. Fabrication in this way of thinking is a departure from material
limitation and contingency, and human labour is a phenomenally defining departure
from our contingency and relation to the ‘natural.’ Quite contrary to this dichotomy,
in the account I am providing here, a Christian account of worship and the resonant
account of moral work respects God’s good act of creation and seeks to operate
within material and bio-regional limitations rather than transcend them. Northcott
puts it in the following way:

the Hebrew Bible… presents the non-human world as a created order which
is redolent of the purposes and providence of the creator God, though it is
ontologically distinct from the being of God. The purposive order of the
 cosmos reflects the will and design of the creator. But this order and
 purposiveness does not exist in a relational vacuum. The Hebrew Bible offers
 a fundamentally interactive account of the relations between the human self,
 the social order and natural ecological order, and between all of these and the
 being of God. This understanding of the interaction between humans, nature
 and God offers a significant contrast with modern ethical individualism and
 subjectivism. The Hebrews believed that moral values and purposes were
 enshrined in the nature of created order.\footnote{Northcott, The Environment and Christian Ethics, 164. Cf. also William P Brown, The Seven
 University Press, 2010), 47.}

The account which we find in Scripture, as Northcott suggests, makes regular
reference to a balanced and ordered engagement with non-human creation and this
dynamic is a purposive and moral one.

Ellen Davis has recently recast this hermeneutical awareness of an ecological
sensibility as an agrarian reading. Though I might also have described the approach I
 take here as “ecological” exegesis, I have borrowed her use of the term “agrarian” as
I think she has captured well the synthetic account of work that I am attempting here. What has not yet perhaps been fully appreciated about Davis’s approach is the way in which she—along with several contemporary Christian environmental ethicists including Michael Northcott, David Clough, and Tim Gorringe—offers a way of grasping and deploying the unity behind themes of technology, work, and environment as they are already present in the Hebrew Scriptures. Following the prolific American essayist and self-titled Agrarian, Wendell Berry, Davis observes how the farmer’s perspective provides a more coherent frame for a number of moral issues which modern urban people tend to dichotomise: “It is whether we use natural systems wisely and gratefully, or conversely, disregard and abuse the systems upon which we and other organisms depend. With respect to our use of arable land, the most important question is whether we can learn to practice agriculture that works like ecosystems, in all our various habitats.” In this way, Scripture offers an integrated and ecological vision of moral human life as “the conscious part of the ecosystems we necessarily inhabit.” In Davis’s account, this is the fundamental moral question concerning good agriculture and she argues that this question is a fundamental concern behind the vision of justice narrated in Christian Scripture. In this way, this hermeneutical approach focused on “the land” has direct purchase for moral reading of Scripture:

The ethical value of the Bible does not consist solely, nor perhaps chiefly, in abstract principles—even such an essential principle as “that love is the ground and goal of being”. Rather, its ethical value consists in the capacity to generate particularized visions and concrete practices of what is good, good for natural systems and for human communities.

In this way, sustained attention to the particularised visions in the text of Scripture, provides a reliable basis for judging and re-constructing particularised visions for our present quandaries. Following this agrarian concern, in this dissertation, I will attempt to attend to the specifically ecological contours of the visions of good work in Christian Scripture in its agriculturally thick context in order to retrieve some of the moral vision embedded in Scripture for contemporary workers.

---

46 Ibid., 264.
3.3. Theological Reading

There is a third aspect in which my reading strategy may stand in contrast to other studies, in this case, specifically biblical-critical studies of work. As I have already implied above, one finds in many contemporary scholarly studies on work in the bible, a reluctance to draw theological or ethical conclusions with any contemporary purchase from Christian Scripture. This reluctance tends to result in a final conclusion that the biblical narrative is ambiguous or partial on the subject of work.\textsuperscript{47} Though they come to this conclusion in different ways, “theologies of work” and historical-critical studies of work in the bible both share in this tendency to conclude that the bible is “ambiguous.” While biblical critical scholars may be content to rest with this conclusion, theological scholars tend to follow this supposition towards the conclusion that more conceptual systematics are called for as a substitute or referee for the (supposedly) terse content of scripture.\textsuperscript{48} Along these lines, in the space of only three introductory pages which he devotes to both biblical content and Christian tradition, John Hughes suggests “Human work has been viewed as having a profoundly ambiguous nature throughout the Christian tradition. In the Scriptures apparently differing views lie side by side, and cannot easily be separated.”\textsuperscript{49} Miroslav Volf is no different; though he devotes considerably more attention to resonances of his theological conclusions with various biblical texts, he nonetheless comes to the same conclusion:

The New Testament, the key source for developing a Christian theology of work, addresses the topic of human work only occasionally, and as a subordinate theme at that. The few relevant New Testament passages consist of specific instructions about how Christians should work but make no fundamental affirmations about the meaning of human work. Taken together, these passages simply do not add up to a theology of human work. Some Old Testament passages (like Gen. 1 and 2) look more promising at first sight since they include a more comprehensive perspective on work. But they provide us at best only with some elements of a theology of work. Moreover, even these elements are not useful for a Christian theology of work just as they stand. To integrate them into a Christian theology, we have to interpret the Old Testament statements on human work in the light of the revelation of

\textsuperscript{48} I have presented Volf’s approach as an example of this on p. 8 above.

\textsuperscript{49} Hughes, \textit{The End of Work: Theological Critiques of Capitalism}, 22-24.
God in Christ.”

Part of the problem here may be Volf’s superficial account of the Hebrew Scriptures, which leaves him a stranded and terse study of the NT. Nevertheless, I highlight this tendency among the literature in order to note my intention here to pursue a theological reading strategy in spite of my close textual focus. In particular, this leads me to presume that there is a theologically construed continuity to be found among the various texts of Scripture. In looking for continuity, I do not mean to suggest that the biblical narrative regarding work is not complex, but this is a far cry from the suggestion that it ambiguously provides no guidance for a moral-theological account on work. This theological focus also dovetails with what I have detailed above as a Canonical reading with its emphasis on the final received form of the text. There are several methodological implications of a theological approach: I will avoid spending my interpretive energy reconstructing redactive layers, presumed authorial strata, or form-critical units which lie behind the text which we have. Similarly, I will not engage in creative reconstruction of texts, entertain interpretation based on an imagined original author or date for a particular text, or entertain formal divisions which are not supported by broad (and theologically construed) consensus. A theological reading need not make exegesis unhistorical, or even neglectful of redactive dimensions which may be evident in the text, though I will be considerably less optimistic about this possibility. One benefit of this approach is that it enables me to re-direct attention to texts which have been historically neglected without excessive justification in response to Wellhausen’s famous disdain for (supposed) “priestly literature” which includes a considerable portion of worship texts. It is my hope that the reader will see the benefit of the ecologically sensitive theological approach that I will deploy in this study particularly in the recovery of attention to worship texts and agrarian themes which have been substantially neglected in modern biblical study.

Volf, Work in the Spirit: Toward a Theology of Work, 77. See also Volf’s more specific treatment of Jesus which leads to the same conclusion on Ibid., 93.

In particular, I will attempt to provide attention to points of difference between the LXX and MT when relevant. I will, however, following Childs, prioritise the MT in my study of Hebrew Scripture here. Cf. Childs, Introduction to the Old Testament as Scripture (SCM; London, 1979), pp. 69-106; cf. also the discussion on pp. 659-71.
4. Content and Structure for this Study

The chapters of this study are divided into two parts. In Part 1, I begin with a sustained look at the details of “good work” as narrated in the Tabernacle construction account in Exod 25-40 and then proceed in subsequent chapters to similar analysis of subsequent construction accounts. This is a deliberately intertextual study and as I attend to the transformation of the meaning and significance of the Tabernacle/ Temple across the Hebrew Scriptures and NT, I will fill out and nuance my account of moral making attending to themes such as agency, sociality, skill and wisdom, and the material culture of work. Of particular interest are the uses of Temple building in eschatological and ecclesial analogy. I conclude this chapter with some examination of the significance of these metaphorical appropriations for work ethics and provide an account of the coherence of the ethics of work as it is presented in these various texts. As Tim Gorringe has observed in his *Theology of the Built Environment*, Paul’s epistles are filled with the language of building, and so this first part overlaps with the second as I note how the church becomes both the product and the site of moral work.\(^2\) This leads me to the Part 2 of the dissertation where I develop a more detailed account of the relational dynamic between work and worship as it is delineated in Christian Scripture. As I have already suggested above, I mean for this study to carry some purchase on the contemporary practices of Christian communities and so my account there is meant to explicate the dynamic between work and worship in order to generate some possible avenues for a rehabilitation of the moral life of Christians through their worship. The regular recourse in post-enlightenment studies of ritual and liturgy towards a sacred/profane typology, can often produce a dichotomised account of the relationship between work and worship. In this study, I again begin with the Hebrew Scriptures and then pursue explicit intertextual study, plumbing the priestly work-vocation for resonances and distinctions with the notion of work for Jesus, his disciples, and the apostle Paul in the NT. The primary question here is regarding the shape of this relationship between a peculiar context: “worship” and a more domestic one: “work.” Finally, I conclude with a study of offertory practices. Here I bring my attentiveness to work themes to bear on a sustained reading of offerings, sacrifices, and tithes. As is the case with previous chapters, much hinges on our navigation of the transition between the Hebrew Scriptures and the NT. With this in mind, I will

develop an account of the specific dynamics of work/worship relationship that arise from a sustained look at non-expiatory offertory rituals. In particular, I will argue that the notion of ‘consecration’ may be a suitable theological term for describing the relationship which I have identified in earlier chapters between work and worship. I will argue that the proper performance of worship necessarily entangles the ordinary work of the people of God, and that too clean a distinction between these can only survive in the midst of blasphemous worship.
Part 1
Moral Making: The Construction of the Place of Worship
Chapter 1

Building the Tabernacle

Nearly every book in the past decade on work by a theologian or Christian ethicist has included some brief reference to the Tabernacle account. This attention is not unwarranted, as a moral reading is suggested by the text itself, as the Tabernacle account is, as Ellen Davis observes, the most lengthy account of work in the bible: it spans a third of the whole book of Exodus. Also making it of further relevance to this discussion of work—in relative contrast to Genesis—the Tabernacle account in Exodus is concerned not exclusively with the work of God, but with the work of God’s people. Of course, these two are intimately related, as is suggested by the connections between the Genesis creation account and the Tabernacle account and Temple. There is strong intertextual warrant to suggest that the Tabernacle account sets a standard by which well-explicated worship construction narratives are morally explicable. It is important to note that there are references to a variety of different kinds of work and workers across the text of Scripture, but it is my

---

2 Cf. 1 Kgs 6; Ezek 40; Neh 3, 1 Chr 22. I will explore this intertextual relationship at length in subsequent chapters.
contention in this dissertation that the account of work detailed in the making of the Tabernacle is uniquely paradigmatic. The paradigmatic status of this account is emphasised by the literary resonances between Exodus and Genesis. In underlining the relation between these two texts, Joseph Blenkinsopp observes that there are three primary points in the history of Israel where “work conclusion” formulae appear: the “creation of the world” (Gen 2:1-2), the “construction of the wilderness sanctuary and its appointments” (Exod 39:32, 40:33), and at the point of “dividing the land among the tribes after the setting up of the wilderness sanctuary at Shiloh” (Josh 19:51).¹ On a symbolic level, the Tabernacle as it is described in Exodus resonates with the construction by YHWH of Eden, a narrative of divine Temple construction.⁴ Along these lines, it can be said that the events which follow Israel’s deliverance from Egyptian slavery narrate a recapitulation of the creation account in Genesis. The elaborately described construction project presents a re-creation of the people of Israel, marking their first free labour since delivery from Egypt.

Though I will turn later in this chapter to some more in-depth analysis of the correspondence between the human construction described in Exodus and the divine act of creation described in Genesis⁵ I will begin with a focus on the Tabernacle as I believe we can observe the meaning of this relationship with a certain amount of freshness by setting aside the prologue, and beginning with the first official account of the construction of the place of worship. With this in mind, I begin with the Tabernacle, and this offers us a platform upon which to look forward through Scripture to later Temple construction accounts and also backwards to the paradigms set in the cosmology of Genesis. The Genesis account provides us with an account of

---

⁴ There is also a parallel between the re-creation accounts in Genesis and Exodus which can be observed on a literary level. Just as Noah spends 40 days and nights awaiting re-creation (Gen 7:12) and sets up an altar afterwards (Gen 8:20), Moses spends 40 days and nights listening to God’s instructions for the new life which awaits the newly liberated people of Israel (Exod 24:18, 34:28), and then he descends to supervise the construction of the tabernacle (Exod 25-31, 35-40).

26
the first work of God, while the Tabernacle offers the first extended description of the work of God’s people and more particularly the first formal work on their place of worship.

Ellen Davis has recently drawn attention to the Tabernacle account in Exodus as an ethical text which speaks with incisive prophetic critique to slothful work. We find this critique in the midst of a worship setting, precisely because, as Davis relates, “It takes some imagination to confess poor work as sin, because ‘claiming the truth that reveals this sin requires a wholly revised view of the world’.” In the Tabernacle account, the activity of constructing a worship space serves to create a new, morally ordered world which can offer insight to our present moral approach to work. In a resonant way, in his study of the Tabernacle, Mark K. George argues that space can be discursive (in the sense of discourse detailed by Foucault in “Of Other Spaces”) and conveys, among many things, the values and priorities of a society: “in addition to its physical and mental aspects, space is something that has social meanings, values, and significations bound up with it.” This description of such a free-floating piece of space carries a moral aspect particularly because “it is infused with social meanings particular to Israel, and includes Israel’s understanding of how to relate to its God and the rest of creation.”

In spite of its popularity for brief citation by Christian ethicists, this portion of Exodus has not been a popular candidate for close study. In one of the few modern studies on the Tabernacle, Frank Cross sets the situation in latter Exodus studies:

The Tabernacle is no longer of interest to Christendom as a whole. Scholars from time to time delve into the tedium of its installations, but by and large theologians and preachers look elsewhere for Biblical insights. In past generations this was not true. Few students of the Bible were without ideas as to how the Tabernacle should be reconstructed from the Biblical data. Its attendant theological concepts were heralded from the pulpit as setting forth the ideal age of Israel, the prototype of the Kingdom of God, and the typology of the New Covenant.

Amidst those 20th-century studies which do exist, most focus on formal features of

6 Ellen F. Davis, Scripture, Culture, and Agriculture: An Agrarian Reading of the Bible (New York: Cambridge University Press, 2009), 142.

7 Mark K. George, Israel’s Tabernacle As Social Space (Atlanta: Society of Biblical Literature, 2009), 18.

8 Ibid., 8.

the text or offer comparative analysis with other related ANE documents.\textsuperscript{10} Yet, as Cross notes, the 20\textsuperscript{th}-century dismissal of the latter half of Exodus is peculiar to modern biblical-critical scholarship. There is a great deal of pre-modern literature emphasising the importance of the Tabernacle account. One also finds appeal to the importance of the Tabernacle narrative in Rabbinic materials and in the NT.\textsuperscript{11} It is my contention, as I have suggested in the introduction, that some of the modern neglect of this text is due to its strangeness. There is good reason to believe that the \textit{strangeness} of the text is actually intended by its authors. While a superficial reading of the Tabernacle text might lead a casual reader, dizzy at the extensive material detail in Exodus, to conclude that the genre of the text is an architectural or building plan. Yet, in spite of the substantial amount of detail present, close readers have noted that—as with the survey lists and ritual instructions I will discuss in later chapters—the Tabernacle does not readily conform to this genre. As George notes, “objects that are not essential to the practice of Tabernacle space, such as the plates, dishes, flagons, and bowls used with the table for the bread of the Presence, are not described in detail, beyond their being made from pure gold (Exod 5:9; 7:6).”\textsuperscript{12} Similarly, details which would be required to reconstruct the ark itself are missing, including adequate “description of the underside of the \textit{kappōret}.”\textsuperscript{13}

As a result, there is no way to know whether or not there was a rim around its interior edge. Such a rim might have enabled the kappōret to sit securely on top of the ark, a useful feature during transportation, when the kappōret might get jostled or tilted in such a way that it could fall off the ark. But short of lifting the kappōret off the ark in order to determine if such an interior rim existed, there is no way for someone walking up to the ark to know.\textsuperscript{14}

This observation should give some pause to those theologians who draw superficially on the language of design in Exodus and find in Bezalel a re-valorisation of architecture and engineering while missing the fact that an architect could not actually reconstruct a Tabernacle from the details provided. Given this feature of the text, it would seem that the Tabernacle narrative is meant to convey something

\textsuperscript{10} Robertson provides a helpful summary of these, see Amy H.C. Robertson, “‘He kept the measurements in his memory as a treasure’: The role of the tabernacle text in religious experience” (PhD Diss., Emory University, 2010), 15-29.

\textsuperscript{11} This occurs explicitly in the NT in Hebrews 8:5, but also implicitly in the temple references which can be found in the gospels, Paul’s epistles, and in Revelation as I will note later in this chapter.

\textsuperscript{12} Mark K. George, \textit{Israel’s Tabernacle As Social Space}, 70.

\textsuperscript{13} Ibid., 70.

\textsuperscript{14} Ibid., 70-71.
slightly different. George provides the insightful observation that the description provided by the writer is visually oriented. Instead, we find:

> The descriptions of the ark and kappōret… are from the perspective of someone other than their builder or designer, someone who knows and experiences Tabernacle space by walking through it. They are not blueprints. This choice of perspective is a social action, one resulting in a different social understanding and appropriation of space than space described by means of blueprints.  

George’s argument is complemented by a recent dissertation by Amy Robertson who argues in a similar fashion that the latter portion of Exodus offers a liturgical poetics. According to Robertson, the difficulties in reading caused by intentional gaps in detail are meant to commend a visual and liturgically oriented contemplative reading. As she puts it, “The waxing and waning of proximal literary patterns and the significant variety present within those literary patterns creates a veritable literary symphony and, needless to say, facilitates a complex reading experience.”16 This reading affirms the possibility that the Tabernacle narrative is not written in an arcane architectural genre only fit for ancient builders, but is intended for a wider audience and is provided precisely for the sort of moral reading I will undertake in the material that follows. As Propp suggests, “Rather than fault the Priestly Writer for imprecision, we might conclude that we are not meant to understand, lest we make a Tabernacle ourselves.”17 The task of preserving the details of the Tabernacle is instrumental to a broader purpose, in which an alternative moral universe is offered up in visual detail for our inspection and edification. This descriptive exhaustiveness has turned away other readers, but, as will be demonstrated below, sifting through these details can actually be quite instructive. With this in mind, I will undertake some “sifting” in this chapter by presenting several broadly consistent refrains of this text and explicating potential moral dimensions conveyed there. This will (1) begin with a study of the meaning of the “divine pattern” revealed to Moses which opens the narrative and I will continue on to (2) examine the role of wisdom and (3) the sociality of the work exhibited in Exodus.

1. Agency and Design in Exodus 25: Anthropology and Work

As I have suggested above, though it may not be quite right to read the Tabernacle instructions narrowly as a faithfully preserved architectural instruction for the reconstruction of the Tabernacle, the narrative nonetheless begins with an emphasis on design. Exodus 25:9 is important for setting out the sort of instructions that are to follow, and by extension, the sort of theological paradigm that is expressed by the Tabernacle construction. Among early Christian writers, the opening section of the Tabernacle account and particularly Exod 25:9 is seen as setting a prototype for the Christian church. This is noted by Ephrem the Syrian: “By saying [to him], ‘You shall make everything according to the model of the Tabernacle that I will show you,’ he first called it a model and a temporal Tabernacle to indicate that it was transitory and that it would be replaced by the church, the perfect prototype which lasts forever. And so… they would esteem it because of its likeness to the heavenly Tabernacle.” Here YHWH’s speech to Moses emphasises fidelity to the specific instructions, “Exactly as I show you concerning the pattern of the Tabernacle, and of all its furniture, so you shall make it.” This instruction does not imply mere fidelity to instructions, but also conformity to the pattern set by the great architect. As I will go on to suggest, this emphasis on fidelity to instruction is elaborated in later texts as an account of ministry as craftsmanship. Further to this conclusion, one can also note that rather than narrowly affirming the vocation of engineers and architects, these instructions seem to commend a broader anthropological affirmation of the human person (and bearer of the imago Dei) as a technical creature: in some sense, both the divine pattern and the expectation of human conformity to it suggests that humans are made for work.

This affirmation is one which must be made carefully, narrowly, and construed in contrast to a number of competing options among ancient work philosophy. There are many options in celebrating the human capacity for fabrication and conformity to design. In seeking to refine this suggestion, there are several distinctions which will serve to further elaborate my affirmation here of the centrality of work to human existence. First, It is important to note that the technical work on

20 Cf. Amos 9:6; Ps 104:2-3.
display in the Tabernacle narrative is only one of two opposing approaches to the human proclivity to work in the Bible. As most craft-workers will know, there is good and bad work. The Hebrew Scriptures, and particularly Exodus in this case, are oriented around exposition and response to good work which glorifies God and edifies God’s people, and bad work which destroys human agency and enslaves God’s people to foreign purposes. Ellen Davis has developed this suggestion with particular attention to Exodus. As she notes, the book contains dual thirteen-chapter treatments of absolute contrasts: perverted work and divinely mandated work:

Exodus is setting before us two lengthy, vivid pictures. In the first thirteen chapters, we see Israel enslaved in Egypt, trapped in “that iron furnace” (Deut. 4:20), the great industrial killing machine of Pharaonic Egypt. There Israel builds store cities for a king so deluded he thinks he is a god. Then at the end of the book, thirteen chapters portray Israel’s first concerted activity in freedom. Israel’s first “public work” is to build a sanctuary for her God, who is of course the real God. These two long narratives at beginning and end are a sort of unmatched pair, designed to contrast absolutely. They are respectively, perverted work, designed by Pharaoh to destroy God’s people, and divinely mandated work, designed to bring together God and God’s people, in the closest proximity possible in this life. That is what worship is for.21

Along with Davis, we may affirm that the broader structure and particular content of this Exodus narrative affirm not merely that we are made for work in a generic way, but that we are made to perform good work. In this way, Exodus affirms a moral or normative aspect to this human vocation which must accompany my emphasis on design at the outset of the Tabernacle construction.

Having focused this affirmation, it is also important to resist another tendency in discussions of work and set up an unduly specific account of “good work.” In contrast to this robust affirmation of work as an anthropological category which I am setting up here, some readers have attempted to find a “naturalist” approach in texts elsewhere thought to express reluctance towards human technical expression such as Exod 20:25 and Deut 27:5. In the Exodus instance we find the repeated instruction that “if you make me an altar of stone, you shall not build it of hewn stones, for if you wield your tool [ץָרַח / hrḥ] on it you profane it” (Exod 20:25). One way of accommodating this text might be to suggest that there is a tension in Exodus between a naturalist anthropology, wherein human persons are made for non-technical subsistence (i.e., hunting and gathering) and a more technically oriented

one wherein we find human identity involving, to a certain extent, craft and manufacture. I am reluctant to go down this road as it can quickly facilitate a work/leisure dichotomy. Further, the text does not necessarily warrant such a conclusion. The term hrb may refer to a chisel, or more generically to a tool, but as Peter Enns notes, “The root הַרְבָּֽה is used almost exclusively in the contexts of fighting and warfare.” Keeping this in mind, we may read the instruction here as possessing a humanistic dimension. Levenson makes a case to this effect:

Underlying this humanism is the assumption that the Temple is above the realm of ordinary politics, with its wars and bloodshed. It was, in fact, a place of asylum, and an old law forbids the altar in any shrine to be made of dressed stone, “For you have struck your sword against it and thus profaned it” (Exod 20.25).

Though the “unhewn altar” example offers an interesting trope for discussion, this interpretation is far from the obvious choice. Earlier accounts of altars also challenge these instructions as unequivocal, as numerous Patriarchs before the Exodus construct altars without knowledge of this sanction. Douglas suggests that the reluctance here is not towards work or tools per se, but rather to a restriction which is relevant only in the cultic context. In seeking to further emphasise the distance between such a naturalist interpretation and the text of Exodus, it may also be helpful to note that this approach in terms of polarities is elaborated coherently in another discourse which is foreign to our discussion of work in the Hebrew Scriptures. There is a well-worn tradition in Roman Stoic thought, particularly by Seneca, which affirms agricultural labour while denigrating tool-using technical work as degrading. Whereas the work of the agricultural labourer is conceived of as in conformity to nature as the worker raises crops and follows nature’s rhythms, the artisan seeks to shape and manipulate the products of nature whether they be wood, wool, or stone. In this way, the Stoic’s circumscribed praise of manual labour is actually compatible

22 “חרב,” NIDOTTE 2:255.
23 Levenson, Sinai and Zion, 96. See also the various options described in Paula M McNutt, The Forging of Israel: Iron Technology, Symbolism and Tradition in Ancient Society (Sheffield: Almond Press, 1990), 219.
25 For a more extensive treatment of the various exegetical options on this theme, see also Jackson, “Enjoying the Fruit of One’s Labor: Attitudes Toward Male Work and Workers in the Hebrew Bible,” 349-51.
with a Platonic idealism. Accordingly, Seneca’s treatment of wisdom is contingent upon a dualistic anthropology, as when he suggests, “wisdom does not teach our fingers but our minds.”

Consequently, in Seneca’s Stoic affirmation of the need to model human activity after the supposedly “natural” patterns one finds a new tension created within manual labour between those involved in harvest and those participating in manufacture. This Stoic renaissance does not mark an authentic and conceptually based return to manual labour, but rather—in contrast to the more holistically agrarian account in the Hebrew Scriptures which I am examining here—is a romantic and pastoral movement. In this way, Epicureans, Stoics and many other late-Roman romantics (including Virgil and Horace) exalt a particular form of manual labour in a way that even more harshly undermines the work of the non-agricultural artisan. Accordingly, this Roman affirmation of agriculture represents quite the opposite of the integrated affirmation of agrarian work which I will argue is on display in Exodus.

Finally, there is a third distinction which must be made, against the tendency in contemporary exegesis to assume that this inherent human capacity for work is a postlapsarian novelty. This poses a potential (though perhaps limited) problem for my argument here, in that what is novel may not be protologically “natural.” This leads to the assumption that the state in paradise was one of leisure, and that this might be more natural to human activity. The trajectory of this position is typified in a statement by Proudhon: “Amidst all the problems, so much in the forefront of current attention, about work and compensation, organization of industry and the nationalization of the workplace, it occurred to me that it would help to consider a legislative program based on the theory of rest.”

There are several problems with this assertion, the most basic being that such a reading cannot be claimed as a straight-forward reading of the text of Genesis which describes the first human habitation as a garden and not a forest. Early interpreters demonstrate awareness of this fact as a survey of early Christian exegesis of Gen 1-3 suggests, where one finds a number of late-Patristic authorities who see no trouble with the suggestion that work existed in the pre-lapsarian state. Having noted that we cannot find a

consensus regarding pre-lapsarian leisure in early Christian reflection, it may be better to assume the near-antecedent and affirm that this dominant focus on leisure is not a persistent feature of Christian reflection but is more likely a feature of post-Marxist labour theory, with its obsession with the technological transcendence of toil as a part of de-proletarianisation. I do not mean to argue that discussion of leisure should be excluded from a holistic social ethics, rather my point is that leisure should not function as our starting point in discussing the moral ordering of work. Another way of approaching this issue is to consider the theological commitment which lies at the heart of this issue. A focus on leisure arises out of a tendency to reflect on work from a protologically oriented ethics. But it is not really Christian at all to found a theological anthropology primarily on the account in Genesis. Christian knowledge is eschatologically contingent, as Oliver O’Donovan suggests:

We must go beyond thinking of redemption as a mere restoration, the return of a status quo ante. The redemption of the world, and of mankind, does not serve only to put us back in the Garden of Eden where we began. It leads us on to that further destiny to which, even in the Garden of Eden, we were already directed. For the creation was given to us with its own goal and purpose, so that the outcome of the world’s story cannot be a cyclical return to the beginnings, but must fulfil that purpose in the freeing of creation from its ‘futility’.  

When we seek a basis upon which to make normative moral statements, we are better served then, by using an eschatological frame. Again, Oliver O’Donovan is instructive on this point:

This is what is meant by describing the Christian view of history as ‘eschatological’ and not merely as ‘teleological’. The destined end is not immanently present in the beginning or in the course of movement through time, but is a ‘higher grace’ which, though it comes from the same God as the first and makes a true whole with the first as its fulfillment, nevertheless has its own integrity and distinctness as an act of divine freedom.

An eschatological approach properly provides for the recapitulation of human nature, and it is this eschatological framing which makes the Genesis account only partially normative for Patristic theologians such as Augustine.

Returning to a refined version of my original suggestion, I mean to argue here that Exodus commends a holistically agrarian view of technical work as a normal and

---

31 Ibid., 64-65.
intended part of human experience. This suggestion is defended in several surprising places in contemporary research outside religious ethics and biblical studies. In one example, researchers in business psychology have noted the “IKEA Effect.” They explain:

When instant cake mixes were introduced in the 1950s as part of a broader trend to simplify the life of the American housewife by minimizing manual labor, housewives were initially resistant: the mixes made cooking too easy, making their labor and skill seem undervalued. As a result, manufacturers changed the recipe to require adding an egg; while there are likely several reasons why this change led to greater subsequent adoption, infusing the task with labor appeared to be a crucial ingredient. Similarly, Build-a-Bear offers people the “opportunity” to construct their own teddy bears, charging customers a premium even as production costs are foisted upon them, while farmers offer “haycations,” in which consumers pay to harvest the food they eat during their stay on a farm.32

More specifically, Norton, Mochon, and Ariely argue that the IKEA effect is based upon “a fundamental human need for effectance” and follow research by Bandura which, “specifically points to successful completion of tasks as one crucial means by which people can meet their goal to feel competent and in control.”33 In another context, an amateur-work evangelist, Matthew Crawford has argued in his book, *Shop Class as Soulcraft*, that this human need to participate in work ought to inform design paradigms. Against the contemporary tendency towards “black box” design wherein the physical structure of devices is hidden from the user, as with cars that have concealed dashes, and Apple products that use special tamper-proof screws and sleekly designed bodies, Crawford argues that device structure, and thus avenues to repair should remain conspicuous to the user.34 Whilst writers in the theology of work continue to quibble over the *status* of work, researchers in business and marketing psychology have long-since moved to accommodate this conclusion.

Returning back to my original observation regarding the emphasis in Exodus on fidelity to the divine plan, it is important to note that this affirmation of work provides the starting point for work ethics. It is not a sanction *carte blanche*, but precisely because human work is given a place in the moral vision of Exodus,

33 Ibid., 454.

discussion can be had which considers how we might separate out “good” from “bad” work and also consider what paradigms may help us in this task of moral judgement. This task of discernment is a key concern of the Tabernacle narrative. The starting point for such discernment, as I have suggested at the outset, is for work to be construed as existing coherently only under divine superintendence. This more moderate approach is summed up well in Ps 127:1: “Unless the LORD builds the house, those who build it labor in vain. Unless the LORD watches over the city, the watchman stays awake in vain.”

In the case of the Tabernacle, this superintendence is particularly close, as emphasised by the remarkably descriptive narrative in ch. 25-31, followed by the account of the lapse into false worship (ch. 32-34) which is followed by a complete re-narration of the original instructions with only slight modification (ch. 35-40).

Turning back to the instructions which drive the Tabernacle narrative, of particular interest for our purposes in seeking to understand the moral shape of artifice involved here is the use of the Hebrew תבנית [tbnyt], often rendered in English as “pattern”, plan”, or “design”. This statement in Exod 25:9 which I began with at the outset reminds us that within the divinely provided pattern there is creative space, but this space is morally delimited. Waltke observes that amidst the verbose Tabernacle instructions many details are nonetheless omitted, as is the case with the measurements for the lampstand in 25:31. As I have already suggested, the limited scope of these instructions suggests that this is not technically exclusive literature, but rather for theological purposes. In this way, the absence of detail offers us an affirmation of the agency of the human worker, leaving open a space for creativity as a part of the process of construction, albeit within a constraining plan understood both literally and theologically.

The text of Exod 25:9 and the framing of the narrative remind the reader that humans can be said to be naturally technical, but the expression of this capability runs a near constant risk of lapsing into sin if it is expressed outside divine superintendence and moral ordering. With this in mind, much of the recent writing on the theology of work has rightly emphasised a negative moral approach, seeking to identify limits and boundaries which can constrain human labour. This approach has found clearest expression in the 20th century around the theme of sabbath. Such an approach is entirely commended by Christian Scripture, as the Exodus account is

---

35 ESV.

36 Bruce Waltke, “Banah” TWOT, 117.
itself structured around sabbath observance. As Kearney notes, the first descriptive account of the Tabernacle is structured around seven instructional speeches (25:1, 30:11, 30:17, 30:22, 30:34, 31:1, 31:12), the last of which (31:17) is concerned with sabbath observance. In this way, the Tabernacle narrative parallels the creation account in Gen 1:1-2:3. Recent works and now-classic studies have provided useful exposition of the sabbath theme in scripture as a way of providing liturgically conceived boundaries around human work. But there is room to augment this approach, as one cannot hope to fully address the subject of human work by recourse to a liturgical practice which is wholly defined by cessation from labour. Further, without careful differentiation, this affirmation of sabbath can collude with the early-20th century dichotomy between leisure (or recreation) and work which resulted from Marxist polemics against leisure (or the false impression thereof) in capitalist societies. As Harper observes, work and leisure are inextricably intertwined. With this in mind, in the account that follows, I will attempt to augment the reflection which has been done in exegeting the sabbath command by identifying themes in the Tabernacle account which address work directly from a positive trajectory. I focus here on two different aspects of good work, that it is marked as wise, and that it is conducted socially.

2. Wisdom and Working Knowledge in Exodus 31

Over the past several decades, American and British work culture has undergone a significant transition towards so-called knowledge work. Further, the governments of many developed economies take pride in the fact that their primary industry is no longer making things (i.e., fabrication) or manual labour but rather in dispensing knowledge, services, and manipulating financial markets. This has been accompanied by a turn away from broader notions of knowledge as a part of work

38 See note 38 on page 15.

and an exaltation of “information.” Many contemporary businesses demonstrate their participation in this transition by the way they deploy their profits to emphasise technology over personnel, the rapid acquisition of information over the cultivation of skills and skilled communities, and the pursuit of wealth over the accumulation of virtue. This idea surfaces in modern theories of knowledge which have tended (until recently) to construe what we know in terms of what we can cognitively process. Excluded from “knowledge” are things like our aesthetic senses, narratives, and the muscle memory that only a skilled artist, musician, or artisan accrues after years of hard and improving work. One finds this prioritising also in the exaltation of design over craft, the architect is considered a worker with value added while the builder offers “unskilled” labour. One can find this prejudice often encapsulated in public policy, which relies on the hierarchical organisation of work categories. The American Social Security Code of Federal Regulations (SSR 82-41) defines “unskilled work” as:

the least complex types of work. Jobs are unskilled when persons can usually learn to do them in 30 days or less. The majority of unskilled jobs are identified in the Department of Labor’s Dictionary of Occupational Titles (DOT). It should be obvious that restaurant dishwashers are unskilled. It may not be self-evident that other jobs can be learned in 30 days or less, such as sparkplug assembler, school-crossing guard and carpenter’s or baker’s helper (laborers). In these cases, occupational reference materials or specialists should be consulted.

A quick survey of the “Job Zone 1” list (being “little or no preparation needed”) on O-Net, an American government database of work classifications, reveals the categorisation of unskilled occupations including “Construction Laborers” (47-2061.00) “Fallers” (45-4021.00), “Farmworkers and Laborers, Crop” and “Hosts and Hostesses” (35-9031.00). In contrast occupations affirmed as highly skilled in “Job Zone 5” include “Farm and Home Management Advisors” (25-9021.00), “Materials Scientists” (19-2032.00), and “Architects” (17-1011.00). In this example one can see management and administration of work process exalted over the

---

41 In what can now be view as a somewhat ironic conclusion, Josef Pieper suggests that this category of “information worker” tends to undermine the separation of society into thinkers and workers, cf. Pieper, Leisure: The Basis of Culture, 55.

42 This policy became effective on February 26, 1979, accessed 18 July 2012 from http://www.socialsecurity.gov/OP_Home/rulings/di/02/SSR82-41-di-02.html.

materially engaged practice of work.

Jacques Ellul offers a provocative critique of the influence of what he calls *technique* on modern work which is relevant to our discussion here. Ellul suggests that modern societies have gravitated towards a uniformity in method and purpose unknown in so-called ‘primitive society’ which involves an assimilation of the form of work into a technological paradigm. The first characteristic of this subordination is a deference towards “the rational”:

This rationality, best exemplified in systematization, division of labor, creation of standards, production norms, and the like, involves two distinct phases: first, the use of “discourse” in every operation; this excludes spontaneity and personal creativity. Second, there is the reduction of method to its logical dimension alone. Every intervention of technique is, in effect, a reduction of facts, forces, phenomena, means, and instruments to the schema of logic.  

When worship is properly ordered, its object is the Creator God, and this orientation produces a certain resistance to the trend which Ellul outlines here. While Ellul suggests that this change is somewhat inevitable (in the face of evolutionary pressures), I am arguing here that one may find a counter-narrative which can persist into the modern age. In worship of a God whose character is ineffable, efficiency and rationalistic conceptions of wisdom cannot reign in the same way.

This issue is framed for theologians in the description of the craftspeople who construct the place of worship in Exodus chapters 25-40. While traditional approaches to wisdom in the bible, typically focus on Solomon and the art of statecraft which is perhaps unaccompanied by physical labour—though even in this case he, or someone taken by tradition to be Solomon, hints otherwise in Eccl 2:5—the same wisdom language appears in the Hebrew Scriptures much earlier and in relation to an unexpected career. In describing the people who are to be recruited for the work of building the Tabernacle, one finds quite a striking combination of adjectives. In Exod 31:3 and 35:35, a particular artisan is picked out by name (Bezalel) and the strong language deployed in Exod 31:3-5 makes this status strikingly clear:

> I have filled him with the Spirit of God, [רוח גולמי] with ability [חכמה, σφύς, sapientia] and intelligence [בינה, σοφία, intellectus, intelligentia], with knowledge [ידע, ἔγνωσις, scientia] and all craftsmanship [יכול מלאכתו]

---

Noteworthy here is the bringing together of spirit-filling and a list of abilities which frustrates rationalist epistemologies.

This language of being filled with the spirit of God has a long provenance across the biblical canon and it is used to describe John the Baptist (Luke 1:15), his mother Elizabeth (Luke 1:41), Zechariah when he prophecies (Luke 1:67), the first Christian community after Pentecost (Acts 2:4, Acts 4:31), Peter at his speech (Acts 4:8), and Paul after his blindness is healed by Ananias (Acts 9:17, Acts 13:9). Similar language is also used by Paul in Romans 8:9, 14; 15:19; 1 Cor 7:40; 12:3; 2 Cor 3:3; Phil 3:3. Pre-monarchical judges are described as being granted the “spirit of the Lord” (Judg 3:10; 11:29; 13:25; 14:6, 19; 15:14), Saul is possessed by the spirit (1 Sam 10:6; 11:6) and is enabled to defeat the Ammonites, and this passes to David (16:13) upon his anointing. Remarkably, aside from Moses (Gen 41:38), Bezalel is the first person after the sad statement in 6:3, (“My spirit shall not abide in mortals forever”) to be described as having the spirit.

The language describing Bezalel’s attributes is also strong, as translated in the NRSV: “ability, intelligence, and knowledge” and this cluster of words which are used to describe Bezalel’s spirit-endowment resonate with spirit statements across the Hebrew Scriptures and the NT. In 2 Chr 2:12, Solomon is described by Huram as “a wise son, endowed with discretion and understanding, who will build a Temple for the LORD, and a royal palace for himself” (NRSV). Similarly, Daniel and his friends are given by God “knowledge” [מִיְדָה, ἐπιστήμη, scientia] and “skill” [כְּלֵל, σύνεσις, disciplina] “in every aspect of literature and wisdom” (Dan 1:17).

Remarkably, neither of these instances is accompanied by the same strong language of spirit filling. This contrast is especially significant given ANE parallel literature, as Mark George suggests:

The inclusion of others in the production of Tabernacle social space is not unusual among royal building projects of the ancient near east. What is

46 "חֲשֹׁב מְחָשְׁבָה" which the JPS has translated as “to make designs for work” is literally “to think thoughts” which is usually translated into English using “plan, think out, devise, invent, or scheme.”

47 In subsequent usage, I will defer to English translation in most cases, highlighting terms in brackets following the latest critical eclectic texts of the bible in Hebrew (Biblia Hebraica Stuttgartensia) and in the parallel texts in the Greek Septuagint, and Latin Vulgate for comparison.

48 For more on the complex issue of Solomon’s wisdom, see section 2, in chapter 2 and section 7, in chapter 3 below.
unusual is the ways in which that work is included. It is divinely inspired, just as is the work of Bezalel and Oholiab. . . . It also is due to an internal response by those who participate. They participate because their hearts are stirred or move them. The implication is that, because they are inspired to participate, they receive divine skills for their work, and this sets their work apart from ordinary work."49

This language of ability, intelligence, and understanding of all work in Exod 31 echoes later in Deut 4:6: “You must observe them diligently, for this will show your wisdom and discernment to the peoples, who, when they hear all these statutes, will say, “Surely this great nation is a wise and discerning people!” and in the NT, with Col 1:9-10: “For this reason, since the day we heard it, we have not ceased praying for you and asking that you may be filled with the knowledge [ἐπίγνωσις] of God’s will in all spiritual wisdom and understanding [πάση σοφίᾳ καὶ συνέσει πνευματικῇ], so that you may lead lives worthy of the Lord, fully pleasing to him, as you bear fruit in every good work and as you grow in the knowledge of God” (NRSV). What one finds in the text of Exod 31 is a spirit-empowering of particular attributes which resonates across Scripture. The force of this feature of the Exodus Tabernacle narratives is to trouble modern epistemologies that exclude “working knowledge.” Ellen Davis suggests, “the Bible does not observe our modern distinction between practical skill and the spiritual condition we call ‘wisdom.’ As the Bible understands it, human work is done wisely when it proceeds essentially from a desire to honor God; and wisdom very often has material, tangible results.”50 The logic on display in this text presumes a pre-Kantian unity to wisdom and implicates the activity of mundane work in its expression.

As I have suggested above, verbosity in Exodus is not meant to serve as an architectural instruction, at least not in the modern sense of a blueprint, as it is lacking crucial measurements. Similarly, missing here are extensive instructions for apprenticeship, though this is tersely invoked in terms of the relationship between Bezalel and Olihab, who is something of an apprentice (Exod 31:6; 35:34; 36:1–2; 38:23). Though explicit instructions in the art of apprenticeship are lacking, the process is explicitly included as part of the master-artisan’s duties: “And he has inspired him to teach, both him and Oholiab son of Ahisamach, of the tribe of Dan.” (Exod 35:34 NRSV). As Hostetter notes, the two craftsmen are intended to “[teach] their special skills to a great host of manual laborers engaged in the work on the

49 George, Mark K., Israel’s Tabernacle As Social Space, 64.

Tabernacle.” I draw attention to the element of craft-pedagogy involved in the narrative as it is instructive in answering a key question of this narrative, namely what does it mean to be “spirit filled” for the task of skilled labour as is the case here? The narrative suggests that this sort of pneumatic (spirit) gift does not grant gifts which have not previously existed in the person in question, but rather works in cooperation with natural human abilities that have already been cultivated. John Robert Jackson observes that this sort of spirit-empowerment stands in some contrast to other ANE accounts of spirit-filling which construe it as an overtaking of the person, and thus any attributes gained are in apposition to their normal created ability. The narrative provides us with no details that might trouble the assumption that Bezalel was a craftsman before this spirit-filling. Instead, the text connotes that the consequence of the spirit is that his work is done “with thinking and dexterity divinely enhanced” In other words, this brief mention of Bezalel is not about a chef or a farmer being transformed laterally into another trade of goldsmithing (or perhaps in contemporary parlance, a farmer being made a “materials scientist”). Later mention of wisdom in this narrative seems to associate the particular sorts of work assigned to people with their regular practice (see the mention of “women whose hearts moved them to use their skill” later in Exod 35:26, or the whole skillful crowd in 35:35, or the statement by God to Moses in 28:3: “You shall speak to all the skillful [which includes those weaving women in Exod 35], whom I have filled with a spirit of skill, that they make Aaron’s garments to consecrate him for my priesthood.” This point places the Hebrew perspective at significant odds with other accounts in the ANE, where the work of the artisans is downplayed and credit is given to the manager or deity who guides the work. In the case of one Mesopotamian Temple described by Jackson, “managerial depiction of the Temple construction… is an overriding theme of this text: Gudea is depicted as the artisan who constructed the Temple…. Ultimately the Temple is not even the work of the king but is the work of the gods.” In contrast, Jackson notes, “unlike some ancient Near Eastern accounts of the work of artisans, the ruah olhym never replaces or overshadows the work of

54 “Enjoying the Fruit of One’s Labor: Attitudes Toward Male Work and Workers in the Hebrew Bible,” 297.
the artisan.” This model of spirit-filling resonates elsewhere across the text of Scripture. Daniel reminds us, “Blessed be the name of God from age to age, for wisdom and power are his. He changes times and seasons, deposes kings and sets up kings; he gives wisdom to the wise [σοφίας σοφίαν, sapientiam sapientibus] and knowledge [μνήμη, σοφίας σοφοῖς, scientiam] to those who have understanding [בין, ἐπιστήμη, intelligentibus disciplinam]. He reveals deep and hidden things; he knows what is in the darkness, and light dwells with him” (Dan 2:20–22 NRSV). YHWH does not grant these things by His spirit because they are ecstatic gifts that supplant whatever normal capabilities that a person possesses. Instead, this language reminds us that all good things come from God. And the inverse is also true, for those who seek wisdom outside the economy of the creator of wisdom, these things become foolish (1 Cor 1:18-19, Isa 29:14).

It is nonetheless remarkable that Bezalel is described as being granted wisdom in these very strong terms not for a “spiritual” endeavour as is described in Col 1, but quite literally for the task of building. There is no suggestion that his empowerment is provided so that he can evangelise others while he does his work with prophetic words, or even sing eloquent praise songs while he works. The work on the Tabernacle itself is deemed important enough to require the granting of spirit-filled understanding and wisdom. And this is the broader point that this narrative confronts the reader with: in the text of Exodus, there is a clear suggestion that the physical tasks of ordinary (though excellent beyond measure) work is compatible with what is described as “wisdom,” “discernment,” and “understanding.” Narrow conceptions of wisdom (or understanding) as mere possession of information, or even just the pursuit of knowledge are insufficient. Wisdom is a broad category into which one might place various sorts of epistemic abilities and there is not a clear hierarchy among these abilities in the Hebrew conception in Exodus.

Drawing on Pauline texts, but along similar lines, Miroslav Volf argues in his “pneumatological theology of work” against what he attributes to a Protestant “addition model” where “the Spirit… [gives] ‘something’ new, a new power, new qualities.” Instead he commends an “interaction model” which he elaborates in the following way: “a person who is shaped by her generic heritage and social interaction faces the challenge of a new situation as she lives in the presence of God

---

55 Ibid., 299.
56 Also noteworthy is Volf’s astute observation regarding the resonance of this model with “the commonly accepted Weberian understanding of charisma as an extraordinary quality of leadership that appeals to nonrational motives.” Volf, Work in the Spirit: Toward a Theology of Work, 112.
and learns to respond to it in a new way. This is what it means to acquire a new spiritual gift. No substance or quality has been added to her, but a more of less permanent skill has been learned.”\(^{57}\) I am in basic agreement with Volf’s description here, particularly in his pursuit of a holistic account of work against the dichotomies he identifies in the “vocation tradition” and also in his differentiation of the work of the spirit.

Regrettably, Volf’s attention to the text is limited to a few lines of glosses, leading him to elaborate a commendable account which is construed at the expense of attentiveness to the text:

As they stand, these biblical affirmations of the charismatic nature of human activity cannot serve as the basis for a pneumatological understanding of all work, for they set apart people gifted by the Spirit for various extraordinary tasks from others who do ordinary work. But we can read these passages from the perspective of the new covenant in which all God’s people are gifted and called to various tasks by the Spirit…. All human work, however complicated or simple, is made possible by the operation of the Spirit of God in the working person; and all work whose nature and results reflect the values of the new creation is accomplished under the instruction and inspiration of the Spirit of God (see Isa. 28:24-29).

Aside from his superficial dismissal of the Hebrew Scriptures, a second related issue with Volf’s account of pneumatic work is its unmediated aspect. This individualistically focused pneumatology leads Volf to undue worry over questions such as whether “it is possible to understand the work of non-Christians pneumatologically”\(^{58}\) Such a strange query demonstrates the ways in which Volf’s account of work is still theologically located amidst an ordo salutis. Volf attempts to respond (in one paragraph) to this issue by recourse to a sort of natural law account, quoting Basil’s De Spiritu Sancto and concluding “There is hence an importance sense in which all human work is done “in the power of the Spirit.”\(^{59}\) Yet this line of thinking seems to miss the ecclesial dimension of the spirit’s work, which is—as I will note below—attested in both the Hebrew and NT Scriptures. Volf’s pneumatology in this theological account of work suffers from an over-realised

\(^{57}\) Ibid., 112.
\(^{58}\) Ibid., 118.
\(^{59}\) Ibid., 118.
eschatology at the expense of ecclesiality. Rather than lament the circumscribed nature of these pneumatic accounts of work in scripture as Volf does, I find within this ordering an ecclesially mediated ethic which deserves closer examination. There is little to no accounting for the significance of Christian worship and ecclesially particular existence of Christians in the account which follows this pneumatic definition in Volf’s book. On my reading, there is more to be drawn from a close reading of Scripture on this subject, and keeping this in mind, I return now to the text of Exodus though I will pick up this argument regarding an ecclesial account of work in later chapters.

3. Work and Sociality in Exodus 32-36

I have argued above that work is given divine empowerment and blessing, but this theme by itself does not fully encompass the moral shape of worship labour depicted in the Tabernacle narrative. There is a second, and equally important affirmation which balances the first, namely that this work is an inherently social practice. I have written above about the ways in which particular persons and families are singled out for a certain sort of work, and the dynamism which seems to be expressed with regards to various trade-specialisation. It is of further importance to note the strong egalitarian aspect of the work of Israel which is described in Exodus.

3.1. Work and Volition

This egalitarian shape to the Tabernacle construction narrative is worked out in an emphasis in Exodus on the willing contribution by Israel to the construction work. This is emphasised in two related ways, as the raw materials are provided by a voluntary offering (echoing the offerings which will be brought by Israel in the liturgy that occurs after the construction of the Tabernacle) and by voluntary participation in the work. In this way, this willing character of the work is emphasised as relating to all who participate and this stands as a strong repudiation of the forced labour which is described at the beginning of the Exodus account. Those who are summoned to undertake the work (Exod 25:21-22, 26; 36:2) are volunteers: נַחֲשׁוֹת לְבָנָאֲךֵן (“all those whose hearts were stirred”). The LXX is more straight-forward, with καὶ πάντας τοὺς ἔκουσίως βουλομένους (“all those who

- See Volf, 136-37 for his very brief account of the relation between worship and work. I provide a more in-depth critique of this eschatological approach further below in chapter 3 §1, “Is Eschatology the appropriate site for a theology of work?”
willingly desired”). In the Hebrew, the verb לשת (lit: “to lift up”) is used figuratively here, thus as Walter C. Kaiser suggests, “the heart ‘lifts one up’ thus inciting action.” As the LXX translator emphasises, with their use of the verb ἐκοντισῶς, human participation in this enterprise is necessarily free inasmuch as it is communal.

The offerings of raw materials, described in Exod 25:2-25:7, 35:4-9, 35:20-29, 36:3-7, instruct Moses to accept offerings from those who “leave over” [ydbyyw lby, lit: “offer freely”], also used in Exod 25:2, 35:5, 35:29). This part of construction comprises a significant portion of the Tabernacle narrative and several features deserve attention. First, as regards the instance in Exod 25, it is striking that this invitation is the first instruction from YHWH to Moses regarding the Tabernacle construction. Further, the human response to this request elaborated in the second extended narrative in Exod 35 (after apostasy and repentance) is rhetorically remarkable. Everett Fox observes how the “refrainlike pattern of key words (e.g., ‘mind,’ ‘willing,’ ‘service,’ ‘work,’ ‘wise,’ ‘design,’ ‘brought’), strongly portrays the people’s enthusiasm for and participation in the sacred task… the fourteenfold occurrence of ‘every/all/entire’… push the narrative to a crescendo, with the people actually bringing much more than is needed.” This enthusiasm provides a noteworthy contrast to the terse language which describes Israel’s action in the parallel narrative prior to the apostasy in Exod 32:3, yet one should be careful not to over-construe this exuberance. This episode in Exod 35-36 concludes with Moses halting the bringing because they have sufficient (反腐倡廉, ἔκανος) material to complete the design and can leave the surplus behind. The sense of sufficiency is based upon the craftsmen’s understanding of the design, and thus a rule of sufficiency is followed. In this way, the procession is measured against a divinely provided sense of sufficiency:

And they received from Moses all the contribution that the people of Israel had brought for doing the work on the sanctuary. They still kept bringing him freewill offerings every morning, so that all the craftsmen who were doing every sort of task on the sanctuary came, each from the task that he was doing, and said to Moses, “The people bring much more than enough for doing the work that the LORD has commanded us to do.” So Moses gave command, and word was proclaimed throughout the camp, “Let no man or woman do anything more for the contribution for the sanctuary.” So the people were restrained from bringing, for the material they had was sufficient

61 Walter C. Kaiser, “كشف,” TWOT.

62 Few translations grasp at the ecological impact of the final verb in this verse in both MT or LXX. Both “יתרנו” (which is יחר in hiphil infinitive) and “προσκατέλιπον” connote “leave behind” or “leave over.” See “יתר” in BDB, 451 and Wevers “Notes on the Greek Text of Exodus,” Journal of Septuagint and Cognate Studies (Atlanta, 1990), 596.
to do all the work, and more. (Exod 36:3–7 ESV)

As the coda in verse 7 relates, exuberance in this new work is tempered by a sense of sufficiency (contrast this with divine superabundant action described in Mal 3:10) in which Israel has been trained during their time in the wilderness living on Manna, resonating with the rhythm of Sabbath rest.63

As I began this chapter with a discussion of worker conformity and have now arrived at a defence of the “free” nature of this work, some comments are in order regarding the precise shape of the account of worker agency and volition I am elaborating here. One may, after all, over-construe freedom just as easily as one may underestimate servitude in this text. Given the frequent reference to divine superintendence, particularly conformity to the divine “design” as I have noted at the outset, it is important to note that the freedom on display here is not ultimate. This stands in some contrast to the pre-Christian classical approach that Aristotle expounds. In particular, one often finds a reluctance in Greek thought to affirm any aspect or form of work which takes away the agency of the worker (at least for free-born citizens). This includes work which simply lacks a telos, being purely “mechanical” and also work for which the purpose has been subverted as in the case of work which is exclusively directed towards “profit-seeking.” This is a helpful distinction to make with regards to Greek perspectives on work which have not always been appreciated by scholars. William Westermann provides a more sophisticated reading of this Greek disdain for agency-impacting labour:

When Aristotle suggested that craftsmen, meaning free artisans, live in a condition of limited slavery, he did not need to amplify the idea for his Greek readers. Expanded, it meant that the artisan, when he made a work contract, disposed of two of the four elements of his free status [freedom of economic activity and right of unrestricted movement], but by his own volition and for a temporary period.64

Hannah Arendt expands on this noting that “freedom was then understood to consist of ‘status, personal inviolability, freedom of economic activity, right of unrestricted movement.’”65 With this in mind, one can see that the account in Exodus is also rather different from the Greek affirmation of agency as Hebrew work agency is

63 See the extended treatment of this in Davis, Scripture, Culture, and Agriculture: An Agrarian Reading of the Bible, Chapter 4.

given theological subordination. Worker freedom is contingent upon their conformity to the divine rule, and in a related way, their activity is contingent upon natural created limits. We find here a celebration of worker freedom which can nonetheless also celebrate the givenness of material contingencies, and which is as I have already argued above a rather different sort of agrarian account.

3.2. Relating Human and Divine Work: An Ecological Account

As I have noted at the start of this chapter, there are deep resonances between this account of work in Exodus and the divine work in creation described in Genesis. William P. Brown summarises the relationship between the two accounts, particularly noting how Divine action draws in all the various acts I have detailed above:

God is the artisan who fashions a self-sustaining creation, replete with order and beauty, and is satisfied with the outcome. The God of Genesis 1 is a Temple builder with an artistic bent. In view of the Tabernacle’s construction recounted in Exodus 25–40, which mirrors the narrative of creation in Genesis 1, this creator God functionally combines the three discrete roles represented by Moses (the instruction-giver), Aaron (the priest), and Bezalel (the artisan).  

In some sense, human conformity to the design provided is not slavish or mechanical, there is a far more complex bestowal of agency for action operating in Exodus. These twin convergences which appear in Exodus: (1) between human and divine work and (2) between divine creation and re-creation; commend an account of human work which takes into account both the relationships and their interrelation. I have already suggested that good human work must exist in conformity to the divine ordering or “design” and I have further explicated this form of work ethics as agrarian/ecological. This overlapping account of agencies in divine and human work in Exodus reminds the reader first that engagement with the material world, particularly as a worker, brings one into a field of contingency and interrelationship. Denial or ignorance of this reality can offer dire consequences, as I shall go on to argue. The Exodus account confronts the reader with a theological account of worker agency and contingency and sets several crucial guides for a theological account of work. As I have argued above, this specific look at freedom and contingency in worker agency reveals a tension between the agency in work of the worker and their Creator in Exodus. Before I proceed to unpack other related dimensions of work.

---

which nuance this initial discussion (including wisdom and sociality) it is worth pausing here to bring the biblical literature into conversation with contemporary moral reflection on work. In particular, John Milbank has presented a robust discussion of worker agency in theological perspective, and this account has been drawn into comparison with the Exodus account by Peter Leithart.

In his article, “Making and Mis-Making: Poiesis in Exodus 25-40” Peter Leithart presents an assessment of John Milbank’s critique of modern conceptions of the secular via an account of poïesis, but Leithart makes use of the Tabernacle account to elaborate his alternative to Milbank’s approach.\(^67\) Leithart affirms even more strongly than I have above, the human status as homo creator, because (in his approach) they are made in God’s image.\(^68\) In summarising Leithart’s approach, I must bracket out a very dense discussion of Milbank’s modernity critique in order to get to Leithart’s handling of the Tabernacle text. Suffice it to say for our purposes here, drawing on Thomas of Aquinas’ view of “finite causality” Milbank takes as his starting point the suggestion that only God can be truly said to “create”.\(^69\) If one accepts this premise, the consequence is that any attempt to form a distinction between human productive acts (including the generation of “culture”) and divine work are problematic and the category of “secular” becomes unstable. One of Leithart’s primary purposes in reading Exodus is to further probe and augment Milbank’s suggestion along these lines. Thus he concludes, “in an objective, historical sense, the erection of the Tabernacle was the construction of a new religious and sociological world. In building it, Moses remade the socio-religious structures of the world by remapping the terrain of sacred and profane space.”\(^70\) As I will note in my conclusion, the anti-Tabernacle account of the golden calf teaches us that all human work relies on sacred authorisation: “To be genuinely creative, then,

---

\(^68\) In spite of her emphasis on practices, one finds that Ellen Davis’s unity of art and action resonates with Milbank’s preference for Plato (as Milbank puts it) “he does not divide ‘ethical’ from ‘artistic’ activity, but rather sees both as proceeding from our determinations of the truth in the light of the Good.” John Milbank, *Theology and Social Theory: Beyond Secular Reason* (Oxford, UK: Malden, MA: Blackwell, 2006), 356. With this in mind, John Ruskin serves as exemplar for Milbank because “he sought to restore questions of virtue both to theoria, our looking at nature, and to the practice of the artisan--in a way that did not subordinate either our looking at nature, or our imaginative construction, to an initial ‘timeless’ vision, but instead worked towards the latter by means of the first two” Ibid., 357.

\(^69\) “finite causes can give new shapes to things, they cannot bring things into being in any deeply creative sense” Leithart, “Making and Mis-making: Poiesis in Exodus 25-40,” 310.

\(^70\) Ibid., 315.
poiesis must be authorized by the Word and embody a creative performance of the Word.”

The particulars of this grounding in divine authorisation and poetic performance is where Leithart launches his critique of Milbank’s approach. Following the early modern Italian philosopher Giambattista Vico, Milbank sees idolatry as a linguistic mistake, such that “false factum” can be related to “misuse and deception in language.”

Leithart is troubled by Milbank’s post-structuralism, asking:

how, in Vico’s system, can one identify and so avoid the linguistic errors that give rise to mis-making? On Vico’s terms, the “mis-made” cannot be measured by any “extra-artificial” standard, for that would undermine the fundamental premise of Vico’s system, the convertibility of verbum and factum. Instead, mis-signifying and the consequent mis-making of culture can be identified only from a different, equally “fictional”, linguistic-social standpoint. For Vico and Milbank, this standpoint is Christianity.

This is the point on which Leithart’s reading of Exodus facilitates his critique of Milbank: “In Exodus, however, making and mis-making are identifiable because there is something outside Israel’s practice by which that practice could be measured.”

Exodus offers a coherent external stance by which worship is judged with the recourse to divine pattern (or tahpît) upon which Moses acts in Exod 25:9. Yet, Leithart seems to presume that this divine pattern is readily available and easily accessible to us. I would prefer to accept Milbank’s point, but suggest that our access to this design is accessed in a mediated way. I join these writers in their affirmation of the interrelation of art and science, making and knowing, and aesthetics and morality in our work (or the good, the true, and the beautiful) and also Leithart’s suggestion that the way we construe the ground of that unity is itself important. Leithart reminds readers of the Tabernacle text that the text brings an epistemology along with its more direct moral and liturgical reflection. This observation carries some troubling implications for George’s use of the frameworks offered by Foucault,

---

71 Ibid., 316.

Lefebvre, and the New Historicism in his aforementioned account, *Israel’s Tabernacle as Social Space*, which seeks to provide “analysis of the Tabernacle narratives… by using a spatial poetics” (41). In some sense, what is required is a liturgical poetics which can perform these narratives. This is the task that I take up in Part 2 of this study.

This discussion of agency also brings us back to the issue of volition and freedom. In addition to the vertical relationship (divine–human) we find that the Tabernacle narrative also emphasises corporate human agency. This can be seen, with particular sharpness, as I shall argue below, when one reads the Tabernacle account alongside the Temple building account in 1 Kings. In Exodus, divine wisdom is bestowed on the artisan Bezalel and his assistant, and then this wisdom radiates outward into the people of God as they teach others about the craft involved in Tabernacle construction and, presumably, Hebrew morality at the same time. In this way, wisdom can be seen to ripple outwards throughout the people of God as they construct the place of worship.

3.3. **Work Sociality: Working and Worshipping together**

As I have already hinted just above, in addition to the voluntary nature of the work, both construction and worship are inherently social activities. Exod 25:8 underlines this aspect at the outset: “have them make me a sanctuary, so that I may dwell among them.” Of the instances of the verb “(mid” [יְּשַׁע “to make”] that occur in the two construction narratives, 38 have a plural subject.75 Several texts particularly emphasise the participatory nature of this enterprise. The priestly garments are to be made by “all the skillful, whom I have filled with a spirit of skill” (28:3, italics mine). Further emphasis, perhaps not accidentally, comes with the second set of instructions in Exod 35-40. This section begins with the invitation: “Let every skillful craftsman among you come and make all that the LORD has commanded” (35:10, italics mine). After these instructions are set in motion, we read that “all the craftsmen who were doing every sort of task on the sanctuary came, each from the task that he was doing“ (36:4, italics mine). Finally, the completion formula with which this narrative ends emphasises the social aspect of the work that has been completed:

---

Thus all the work of the Tabernacle of the tent of meeting was finished, and the people of Israel did according to all that the LORD had commanded Moses; so they did. According to all that the LORD had commanded Moses, so the people of Israel had done all the work. And Moses saw all the work, and behold, they had done it; as the LORD had commanded, so had they done it. (39:32, 42–43)

Though there are named participants in this enterprise (Moses, Bezalel, and Oholiab) and unnamed persons (i.e., the weavers), the overall project is to be one which represents the corporate work of the whole people. As observed previously, even the unique inspiration of Bezalel comes along with his apprentice Oholiab and the text includes a reminder that the two craftsmen come from different Israeliite families, Bezalel from the tribe of Judah, and Oholiab from the tribe of Dan.

While the construction of this mobile sanctuary might be considered social, one might suggest that its operation is a rather exclusive affair. Sarna suggests as much, “It is not designed, as are modern places of worship, for communal use.” 76 But again, this focuses on the peculiar aspect of the worship complex while missing the inherently social affair that was going on in Israel’s work and worship. The offerings (mentioned above) which constitute the raw materials for construction set the tone for the nature of the worship system which is to be described in greater depth later in the Pentateuch and to which I turn my attention in later chapters. Just as the construction is inaugurated by a great accumulation of raw materials which are to be brought as free gifts by both men and women (35:22-29), so too does the later worship of Israel involve all Israel. There is exclusive space in the midst of the Tabernacle in which YHWH is said to reside, but the notion of “שכן” [šākan = “to settle, dwell”] here indicates a unique sort of differentiated divine presence. Sarna suggests, with reference to Exod 25:8:

Careful analysis of the language used here is essential for a proper understanding of the underlying concept and role of the sanctuary. First, the text speaks of God dwelling not “in it,” that is in the sanctuary, but “among them,” that is, among the people of Israel (v. 2). Then, the verb “to dwell” is not the common Hebrew stem y-sh-v but the rarer sh-k-n, which has a different connotation. This verb conveys the idea of temporary lodging in a tent and characterizes the nomadic style of life….Thus, the sanctuary is not meant to be understood literally as God’s abode, as are other such institutions in the pagan world. Rather, it functions to make perceptible and tangible the conception of God’s immanence, that is, of the indwelling of the Divine Presence in the camp of Israel, to which the people may orient their hearts.

and minds.\(^{77}\)

The social purpose behind this worship space is demonstrated both in the various contributions of raw materials and labour drawn in for its construction, and in the universal participation commended for the people of Israel in construction and subsequent worship there.

### 3.4. A Dynamic Account of Skill: Worker Specialisation in Exodus

As Jackson notes, the Tabernacle narrative deploys a “rich artisanal vocabulary,” and in this way, the text rhetorically affirms by name the variety of specialised craft-knowledge which is implicated in the making of the Tabernacle. This includes, beyond more basic use of ח cannabin 31:4 [‘\(sh\) =“to make”] a large variety of Hebrew words that are exclusive to craft work: מקשה \(hrš\) =“carving”, 31:5; \(fwh\) =“spinning by hand”, 35:25-26; \(ār\) =“weaving”, 28:32, 26:36; \(šbs\) =“brocading” 28:20; \(šbs\) =“setting gems” in 28:11; \(rk\) =“tying” 28:28, gold thread cutting (39:3) metal casting (25:12), \(mqš\) =“hammered work” 25:31, \(rq\) =“hammering in gold” 39:3; \(pyh\) =“stone engraving” 28:11; \(sp\) =“gold overlay” 25:11 and perfume blending (30:25) (this list is not exhaustive).

However, it is also important to note that the text gently troubles a reading which seeks to identify Moses (or even YHWH) as managing a sort of Taylorist division of labour. There are discrete skills on display (as affirmed above) which would require significant specialist cultivation, but the overall work is not managed along strictly divided lines. Instead, the flow of skills and abilities remains dynamic such that various work duties blend together. Bezalel and Olihab are enabled with particularly wide-ranging abilities: “He [YHWH] has filled them with skill to do every kind of work done by an artisan or by a designer or by an embroiderer in blue, purple, and crimson yarns, and in fine linen, or by a weaver—by any sort of artisan or skilled designer” (Exod 35:35 NRSV). In this age of specialisation it may be helpful to point out that this sort of artistic poly-practice is not out of the question (William Morris serves as a modern example). What we find here is something closer to the medieval sense of craft, where there are identifiable specialised crafts (weaving, stonecutting, embroidery, etc.), but individual craftspeople are not locked

---

\(^{77}\) Ibid., 158.

Sennett, The Craftsman, Chapters 2-3.}

Another note is in order, regarding the artisanal vocabulary on display here, along with the wisdom of Bezalel. An incautious reader might extrapolate the trajectory of this vocabulary and suggest that the text effectively consecrates all human occupations. In this way, as I have mentioned above, one might note the language of “design” in this account and appropriate the Tabernacle narrative as a revalorisation of architecture and engineering. Along these lines, the theologian Paul Stevens has described Bezalel as his “patron saint.”\footnote{Stevens, Doing God’s Business: Meaning and Motivation for the Marketplace, 177.} The very strong language of divine wisdom associated with this ordinary artisan (as opposed to priests, or Israelite leadership) and the inclusion of a wide number of other artisans in this divinely commissioned building project has led Stevens, along with several others to rely on the Tabernacle text therapeutically, to re-value particular human occupations. A number of problems arise from this sort of incautious deployment of the text in moral reflection. As Davis notes well, the account in Exodus offers a strong counter-example of bad work, and further examples follow throughout the HB. Such a carelessly undifferentiated affirmation fails to provide any moral guidance for the job-seeker. Against bland therapeutic readings, the mere presence of a diverse cast of workers should not be read as a blanket affirmation of any sort of work. Further, the presence of diversity among the workers is a far cry from the overspecialisation which plagues modern work.

3.5. *What to make of the sociality of work in Exodus*

I have drawn attention to the particular character of the social aspect of work on display in Exodus in part because the existing literature on the theology of work can tend to wander unwittingly into an affirmation of the autonomous worker. This may be in part because of the author’s therapeutic concern, but perhaps also because of an implicit influence of the modern liberal tradition which conceives of freedom in an atomistic single-agent-focused way. In a similar way the frequent focus on Bezalel in what are often tragically terse appropriations of the Tabernacle account can endorse the familiar Enlightenment trope of the hero worker crafting art which arises out of his own originality.\footnote{Sennett, The Craftsman, Chapters 2-3.} Without this careful elaboration of the character of
this sociality, even a strong account of the justice inherent in “good work” can prop up a schema in which the corporate aspect of work is construed within a consumer-producer framework: i.e., consumers are exhorted to be aware of their responsibility to the person working, which remains a moral relationship between two individuals. Exodus provides us with a particular template of the corporate nature of the act of work itself. This concern is shared by the sociologist Richard Sennett who reflects at length on the tension faced by workers between autonomy and authority. In The Craftsman, he suggests that “Good work” is best nurtured in a setting which avoids both extremes—the “heroic” individual worker and the automaton which exists in authoritarian settings. Sennett suggests that one criterion for this refocusing of authority in work settings might be skill: “A more satisfying definition of the workshop is: a productive space in which people deal face-to-face with issues of authority. This austere definition focuses not only on who commands and who obeys in work but also on skills as a source of the legitimacy of command or the dignity of obedience.”

This approach provides for a more egalitarian model, without dispensing with the possible need for structured relationships among workers. It is my contention that the moral account provided with the work on the Tabernacle inherently provides this sort of balance precisely because both construction and worship are inherently social activities and they reside within an account of wisdom which provides space for material engagement and skill. Thus in this account of work there are dual dialectics (1) between the agency of individual and collective workers, and (2) between the contingency of materials to worker (i.e., design) and the contingency of worker to their materials (i.e., craft). As I shall go on to argue, a Christian moral account of free work must take into account these two contingencies, i.e., to other workers and to materials. Yet it is also crucial to note that this is not a generically ecological account: rather contingency—in this account—to all other creatures (whether human or tree) is predicated upon the fact of their creation by a Creator. These dialectics are theologically constituted. As Exodus demonstrates, the

81 Ibid., 54.

82 While one can be glad for Sennett’s revalorisation of labour, his recourse to pragmatism for work ethics leaves much to be desired. I will address this and highlight the difference in this account in later chapters.

83 In addition to Sennett, this second dialectic is also taken up by Bruno Latour. Using the ‘fetish’ as a starting point, Latour troubles too simple a resolution of the tension between the mastery exerted by the maker of an idol and its re-making of them in turn. Bruno Latour, On the Modern Cult of the Factish Gods (Durham: Duke University Press, 2010), 22, 56. Another recent account which resonates with my account of humans as created creatures here is David H Kelsey, Eccentric Existence: A Theological Anthropology (Louisville, Ky.: Westminster John Knox Press, 2009).
factor which stabilises these dialectics is the theological superstructure which undergirds the whole of Exodus’ message: specifically it is the doxological purpose of this building project which provides holism to the word performed.

As mentioned in the introduction, in this study I mean to provide a canonically textured work ethics, and so this account of work in Exodus forms a crucial thread, but it is nonetheless just a thread. I will proceed to further develop this examination of the moral impact of the Tabernacle account through related analysis of the coherence and development of these work themes within later texts which also provide substantial accounts of Temple construction. In my reading here, Exodus provides the paradigms and, as I shall argue in subsequent analysis, later construction texts serve to draw these themes into sharper relief and enhance the categories that have been presented in Exodus. With this in mind, I turn my analysis now to comparative examination of selected Temple construction narratives which lie outside the Pentateuch. In the next chapter my inquiry brings me to Temple construction in the monarchial narrative (1 Kgs 5-8) which I will argue provides a set of anti-paradigms which reinforce the moral vision I have drawn from Exodus. I will go on to explicate those texts which narrate the inversion of Temple-construction: with its dissolution as narrated by the prophets (Jeremiah). In chapters three and four, I shall turn to the “Temple not made with hands” and seek to understand the implications of the reconstituted visions of Temple construction (Isaiah, Zechariah, Chronicles and Ezra). These reconstituted visions provide an opportunity to further probe aspects of work ethics in eschatological perspective and prepare for my turn to the NT in the final portion of that chapter. Here my analysis will flow into concluding examination of the language and tropes of the Tabernacle construction narrative as they are deployed metaphorically in the gospels and epistles of the NT. This intensely metaphorical appropriation of Temple construction (i.e., Jesus and Church as the new Temple) does not undermine the kind of moral reading I am attempting here, but rather these texts re-deploy these themes in a new moral context for the work of the church.
Chapter 2
Building the Temple

In reading the latter portion of the Hebrew Scriptures, and in particular, any apocalyptic literature it is hard to avoid the conclusion that the Tabernacle and Temple take on a densely metaphorical function. However, for a time in the biblical narrative they are also nonetheless real physical constructions which could have been seen and felt, required active-duty personnel, and had a moral force in the midst of Israel as a physical fixture. By the time one arrives at the end of the NT, the Temple has taken on (permanently it might seem) a more abstract eschatological meaning. This final meaning is nevertheless reliant on a thick understanding of the actual Temple through which the creation-garden metaphor is built. The approach that I will take here is a canonical one and thus in reading these later construction accounts of the place of worship for a moral aspect I will proceed through, and not above, the narrative journey that describes the construction of the Temple. The Temple has a physical history and a narrative in which a final theological understanding must be situated. In keeping with this conviction, in the previous section, I attended to the ways in which the narrative and physical details of the Tabernacle might prove morally informative. Though I will conclude this chapter with attention to the ways in which theological themes introduced and developed across the biblical narrative are given unique final shape in eschatological visions of Temples which are “not built with human hands,” first I intend to demonstrate that there is much to be made of the middle.

In particular, here we find an elaboration on the material details of construction which may add further texture to this moral account of work. The story of the building of the permanent Temple and its destruction narrates a rending of the
practical moral fabric in which work and worship are so intimately woven together in the building of the Tabernacle. This is where missing threads cause the fabric to fray and the peculiar worship economy which Israel was given in which work was to be morally ordered disintegrates. This unstitching is underlined with particular force (and hindsight) by Israel’s prophets. I will argue that the eschatological reformulation of the Temple can be more thickly understood in a moral sense as a response to this disintegration. My narration of the ways in which worship provides ethics for the people of God will attend to the shape of chaos which ensues when it is (at least temporarily) destroyed by those very persons for whom this moral order is intended to promote flourishing moral community. Over the course of this chapter I will suggest that providing a fresh witness to the unstitching of the moral order of work narrated by the Tabernacle and maintained by Israel’s worship may help to highlight the dynamics behind similar subversions (or “unstitchings”) of moral work which have become commonplace in contemporary practice. I turn first to an examination of 1 Kgs 1-12 set against a Pentateuchal backdrop before turning to several brief examinations of work ethics and the Temple theme in later prophetic literature.

1. Setting a Context for Reading the “King’s” Temple

It is helpful to set 1 Kings against the backdrop of the biblical literature which precedes it, particularly Deuteronomy and Samuel and so I begin with a brief summary of relevant Deuteronomic law. It is here that one finds a straight-forward forewarning of the unstitching of the fabric of Hebrew moral economy in the so-called Deuteronomists critique.1 In the account in 1 Samuel, we find a foreboding warning that the sort of work illustrated in Exodus, which I have unpacked above, with its dynamic economy of freely offered labour and spirit-filled wisdom may come apart:

These will be the ways of the king who will reign over you: he will take your sons and appoint them to his chariots and to be his horsemen and to run before his chariots. And he will appoint for himself commanders of thousands and commanders of fifties, and some to plow his ground and to reap his harvest, and to make his implements of war and the equipment of his chariots. He will take your daughters to be perfumers and cooks and bakers. He will take the best of your fields and vineyards and olive orchards and give them to his servants. He will take the tenth of your grain and of your vineyards and give it to his officers and to his servants. He will take your male servants and

---

female servants and the best of your young men and your donkeys, and put them to his work. He will take the tenth of your flocks, and you shall be his slaves [מחלל]. And in that day you will cry out [מ.instagram] because of your king, whom you have chosen for yourselves, but the LORD will not answer you in that day.²

The final line of the prophet’s passage offers a particularly compelling inversion of Exod 2:23 where the people of Israel cry out for rescue from their slavery. The differences in this text serve to intensify the urgency of the situation; the king here is not a foreign one and while in Exodus we read that “God heard their groaning,” Samuel warns Israel that “the LORD will not answer you in that day.” Jackson summarises the all-encompassing subversion of the work of Israel which the text envisions:

The demands of a king will involve confiscation of labor power, lands, and wealth (1 Sam 8:11-17). The king will demand their labor power through conscription into a standing military force (with its various levels of officers), conscription to agricultural labor (חרס and כסר, plowing and harvesting royal lands), conscription of smiths (those who would make chariots and weapons), and conscription to palace service or service in state industries (“perfumers,” “cooks,” and “bakers”).³

Much can be made of the themes introduced in the 1 Samuel text, but I will defer my explication of ‘bad work’ for our reading of the subsequent narrative in 1-2 Kings, to which I now turn.

This suggestion that the reader is to measure Solomon’s kingship against the Deuteronomic law provided by Moses is also indicated in the text of 1 Kings. As Leithart suggests, “The allusions to Deut. 28 provide a further indication that the Solomonic order of things is built on the Deuteronomic order.”⁴ A natural extension of this suggestion is that Solomon’s conduct can be measured by comparing his building project to the protological Israelite building, the Tabernacle.⁵ Read specifically for the details of the Temple construction account, particularly against the backdrop of the Tabernacle construction account and the Deuteronomic literature, a shadow hangs over the Temple construction account in 1 Kings. One finds an uneasiness in the text concerning the admixture of worship and work in constructing

---

² 1 Samuel 8:11-18 ESV

⁴ Peter J Leithart, 1 & 2 Kings, Brazos Theological Commentary on the Bible (Grand Rapids: Brazos Press, 2006), 69.
⁵ This is of course preceded by another protological structure made by YHWH: Eden.
Solomon’s place of worship. The account of Solomon’s resort to forced labour, plundered materials, and collusion with ‘the nations’ in his Temple construction not only fails to represent the distinctive theology which I have elaborated in relation to the Tabernacle, but demonstrates a direct subversion of the relationship which I have detailed above. As I shall repeatedly affirm, however, by their violation, the basic contours of work on display in Exodus are re-affirmed even more forcefully in this narrative.

Early in the narrative of 1 Kings the reader is set up to expect resonances with the parallel literature in the Pentateuch by David’s charge to his son Solomon:

When David’s time to die drew near, he commanded Solomon his son, saying, “I am about to go the way of all the earth. Be strong, and show yourself a man, and keep the charge of the LORD your God, walking in his ways and keeping his statutes, his commandments, his rules, and his testimonies, as it is written in the Law of Moses, that you may prosper in all that you do and wherever you turn, that the LORD may establish his word that he spoke concerning me, saying, ‘If your sons pay close attention to their way, to walk before me in faithfulness with all their heart and with all their soul, you shall not lack a man on the throne of Israel.’” (1 Kgs 2:1–4 ESV)

As David’s exhortation suggests here, the persistence of the monarchy depends on fidelity to the Law of Moses, a term which refers not narrowly to what might be considered juridical literature, but rather to the whole of the Pentateuch and the moral instruction narrated there. In addition, Provan notes a good deal of direct literary correspondence to the Deuteronomic law:

Particularly in view here (as in Joshua) is the law code of Deuteronomy. That is the text to which the language of verses 3-4 taken cumulatively points us (e.g., observe what the Lord your God requires, cf. Deut 11:1; walk in his ways, cf. Deut. 8:6; keep his decrees and commands, cf. Deut. 6:2; that you may prosper in all you do, cf. Deut. 29:9; that the Lord may keep his promise, cf. Deut. 9:5; with all their heart and soul, cf. Deut. 4:29). It is Deuteronomic language such as this that we shall find recurring throughout Kings, as first Solomon himself (1 Kgs. 11) and then all the succeeding kings of Israel and Judah are weighted in relation to the Mosaic law code and found wanting.6

In addition to David’s charge, two of the initial details narrated with regards to the beginning of Solomon’s career as monarch set up an ambiguous tension with the details of kingship narrated in the Pentateuch: (1) Solomon’s “marriage alliance with Pharaoh king of Egypt” and (2) worship by the people “at the high places... because

---

6 Iain William Provan, 1 and 2 Kings, New international biblical commentary (Peabody (Mass.); Carlisle (U.K.): Hendrickson ; Paternoster press, 1999), 31. This recourse to Deuteronomy is a well-noted feature of 1 Kings by commentators, including more recent work by Brueggeman and Leithart.
no house had yet been built for the name of the LORD.” I use the term ambiguous here because this description of the start of Solomon’s career does not represent a bald-faced or deliberate violation of Pentateuchal standards, but rather a sinister ambiguity. The reader is left initially to wonder whether Solomon can pull off his ambitious plan. Keeping this ambiguity in mind, one can read the pursuit of a relationship here with the King of Egypt in two different ways. Reflecting the experience of Joseph (and to a more limited extent Abraham) in the Genesis account, this could reflect a relationship as outreach to foreign kings and a welcome sign of Israel’s cultural ascendancy. Or, read against the Exodus narrative, this new relationship could invoke a dark recollection of Egypt and the oppression of Israel under Pharaoh there. The problem presented of worship at the ‘high places’ can also be read in two contrasting ways. In light of the later development of this practice with respect to syncretistic devotion to other deities, worship at high places can ring as a warning. However, up until this point, the phrase has been used in the previous narratives in the Hebrew Scriptures with a more benign connotation, a place where YHWH was being worshipped. One need not decide either way, as it may well be the writer’s intention to leave this question open at the start of the narrative, so that later details accelerate the transformation of ambiguity into apostasy. Further emphasising this ambiguity, the specific location of this high place at Gibeon potentially implicates Tabernacle worship as the Chronicler recounts this as the place where it was located during David’s Reign and as Arnold notes, Gibeon is included in Joshua’s list of Levitical cities (Josh 21:17). In some contrast, the Deuteronomic narrative emphasises the degree to which Gibeon is geographically removed from the Jerusalem tent-shrine. The conjunction יְרוּם [ry] in the subsequent passage further underlines this ambiguity: “Solomon loved the LORD, walking in the statutes of David his father, only יְרוּם [ry] he sacrificed and made offerings at the high places. And the king went to Gibeon to sacrifice there, for that was the great high place. Solomon used to offer a thousand burnt offerings on that altar” (1 Kgs 3:3–4 ESV). The text

7 1 Kings 3:2, ESV
8 Cf. Selman “יְרוּם” NIDOTTE, 1:659. TDOT provides a similar reading, 2:143.
9 1 Chr 16:39; 21:29; and 2 Chr 1:3, 13. See also Patrick M. Arnold “Gibeon” in AYBD, 2.1011-12
10 To this effect de Vries notes, “it is noteworthy that the parallel passage in 2 Chr 1:3-13 paraphrases this in such a way as to bring Gibeon inside the Jerusalem city-precincts (something that now has in fact been accomplished in the outward extension of Jerusalem’s city limits).” Simon J De Vries, 1 and 2 Chronicles (Grand Rapids: Eerdmans, 1989), 51. See also the mention of the Ark residing at Jerusalem in 1 Kgs 3:15.
began with the straightforward suggestion that Solomon loves YHWH and follows his law. However, as these early verses unfold, the status of this “high place” worship is opaque. What is clear from the text of 1 Kgs 3 is that the task of developing the worship of Israel is identified as a task which this king will take up. Whether one identifies the crucial issues as one of centralisation or idolatry the problem is nevertheless one of conformity and fidelity in worship and thus the pattern is set for a juxtaposition of the construction work on the Tabernacle and Temple.

2. Working Wisdom and Solomon

I begin this comparison with a focus on the topic of “working” wisdom. In order to demonstrate the urgent need for a re-appraisal of biblical wisdom for a Christian ethic of work, it may be helpful to begin with a brief survey of the frequent and superficial use of Solomon in business literature. Demonstrating that the trope has purchase outside explicitly religious discussions, in one study of Kantian capitalism Chryssides and Kaler suggest that business culture can generate something like the “wisdom of Solomon” and go on to use the wisdom of Solomon as a metaphor for impartiality. They suggest, “The task of management in today’s corporation is akin to that of King Solomon. The stakeholder theory does not give primacy to one stakeholder group over another, though there will surely be times when one group will benefit at the expense of others. In general, however, management must keep the relationships among stakeholders in balance.”

They suggest that in Corporate Law “a body of case law will emerge to give meaning to ‘the proper claims of stakeholders,’ and in effect that the ‘wisdom of Solomon’ necessary to make the stakeholder theory work will emerge naturally through the joint action of the courts, stakeholders, and management.” Whatever one might make of their business theory, it is interesting to note the appearance of Solomon as a type for the ‘wise manager’ and his wisdom deployed uncritically as a metaphor for exemplary building of social capital. In another example, Myron D. Rush suggests in his book Management: A Biblical Approach that the visit of the queen of Sheba to King Solomon (1 Kgs 10:1) should serve as an example of “How a Christian’s

---

12 Ibid., 265.
faithfulness can bring praise to God even from a non-Christian.”13 He concludes that this can serve as a metaphor for the task of being a biblical manager: “People are watching your life—how you conduct your daily business activities—and they are either praising God like the queen of Sheba or they are shocked because you are no different from the rest of society.”14 Adding to the previous metaphorical usage, here Solomon functions as an ideal for cultural engagement and business-based apologetics. In my assessment below this reading is not only inaccurate but a profoundly misleading application of this text. Solomon also serves as a generic metaphor for exemplary wisdom in business. In The Top Line, Tom Despard suggests that “Business ethics is about exercising good judgement and making the right moral choices. It’s about striving for a great Top Line and about connecting virtues with vocations.”15 In affirming this conviction, he provides “a few choice words from King Solomon as he asks the Lord for wisdom” and cites 1 Kgs 3:9: “So give your servant a discerning heart to govern your people and to distinguish between right and wrong.”16 In another similar appropriation of Solomonic wisdom, the entire text of Street-Smart Ethics: Succeeding in Business Without Selling Your Soul by Clinton W. McLemore is focused on “my best attempt to unpack fifty of the most pithy and strategic sayings in the book of Proverbs” based on the assumption that they are wise sayings of Solomon. He adds, “They are pithy in the sense of being highly substantive and strategic in that they embody definite strategies for survival and success.”17 The popular Christian business writer, John C. Maxwell provides several appropriations of Solomon in his pithy business advice books. In The 21 Most Powerful Minutes in a Leader’s Day: Revitalize Your Spirit and Empower Your Leadership (2000), Maxwell reflects on the important role played by ‘The Big-Mo’ or momentum in business leadership. He concludes:

Solomon took a good kingdom, and he turned it into a great kingdom. He built an impressive administration that relied on the talents of twelve governors. He made numerous alliances with neighboring powers. He secured trade and shipping routes that made Israel the crossroads of the world. He

14 Ibid., 227-28.
16 Ibid., 114.
engaged in an extensive building campaign that made a marvel of Jerusalem. His projects included the Temple of the Lord, and elaborate new palace, the House of the Forests of Lebanon, the Hall of Pillars, the Hall of Judgment, and extensive defensive fortifications for the city. And he accumulated incredible wealth.

To sum up Solomon’s reign…. Solomon took the momentum his father had given him and created the most powerful and prosperous nation in the world.\(^\text{18}\)

Maxwell narrates this comprehensive summary of Solomon’s reign uncritically as a list of achievements which “his son Rehoboam destroyed in a matter of days.”\(^\text{19}\) This quick sampling of business literature, particularly the use of the “wisdom of Solomon” demonstrates that the text of 1 Kings is regularly deployed in reflecting on business management both in explicitly religious literature and elsewhere. Among all these various readings one finds that Solomon is often commended as an ideal type for managerial conduct and as a success story. Through such superficial appropriations of the bible, it is not surprising that one finds a diverse range of applications with biblical paradigms being used merely to prop up an author’s suggestion. Perhaps the most distressing outcome is that business writers freely appropriate Solomon as the ideal type of wisdom at the expense of the robust and contrasting account of working wisdom in Exodus which I have explicated above. Along these lines, Kessler and Bailey note, “Over the years, we have come to associate wisdom with strong judgement and being prudent or astute like King Solomon. In other words, practical wisdom can be thought of as the ability to link the other two forms of wisdom: knowledge and practice.”\(^\text{20}\) As I shall note here, the Solomonic narrative in my canonically focused reading seems to suggest the exact opposite, that Solomon’s wisdom becomes distorted and functions at the expense of practice. These appropriations of Solomon in business literature function as tragically truncated accounts of working wisdom which do not provide answers for, but rather perpetuate the quandaries of modern work. In this section, I will provide a close reading of Solomon’s role in the construction narratives and attempt to provide a canonically-encompassing reading of the meaning of wisdom in the text of Scripture

\(^{18}\) John C Maxwell, \textit{The 21 Most Powerful Minutes in a Leader’s Day: Revitalize Your Spirit and Empower Your Leadership} (Nashville: Thomas Nelson, 2007), 245. To his credit, Maxwell does acknowledge in another book that “by the end of his reign, this brilliant king somehow forgot the first principle of wisdom” in \textit{A Leader’s Heart: A 365-day Devotional} (Thomas Nelson, 2010), 301.

\(^{19}\) Ibid., 245.

as it pertains to work. What emerges is a far more complicated account of this king who functions as a stereotype of wisdom and success.

In some contrast to Exodus where wisdom appears in the midst of work, wisdom comes as a prologue to Temple construction in 1 Kgs (3:5-4:34) where the writer brings the subject of wisdom to the fore with Solomon’s famous request, “Give your servant therefore an understanding mind to govern your people, that I may discern between good and evil, for who is able to govern this your great people?” (1 Kgs 3:9 ESV). There are resonances here with the bestowal of wisdom in Exodus. As de Vries notes, “This structure is dramatic in its simplicity: God offers, Solomon responds; God replies, Solomon worships.”21 Though Solomon’s wisdom has a different aspect, nonetheless, it goes far beyond the mere managerialism expected by contemporary readers. As Leithart notes, the wisdom of Solomon does not consist merely in issuing commands and settling disputes, but has an aspect of poïesis, drawing in the design and execution of the building of the Temple.22 To this end, one can read Solomon’s making of the gold artefacts of the Temple, and planting of his own gardens as an affirmation that a full exhibition of wisdom involves hands-on activity, even for a monarch.

There are, however, tensions with this portrait of Solomonic wisdom as exemplary. Again, de Vries is helpful here in his observation that by the end of 1 Kgs 3 “the portrait of Solomon that we are here seeing differs significantly from the vengeful opportunist in chap. 2 and the political pragmatist of 3:1.”23 Right from the start, the text confronts the reader with a mixed presentation of “wise” Solomon. Within the structure of the text the first exhibition of wisdom by Solomon in settling a dispute between two prostitutes is not an ultimate exhibition of wisdom by Solomon but rather his first act. Solomon’s request for wisdom is preceded by his brutal consolidation of power which results in the killing of his brother Adonijah (2:24) and David’s general Joab (2:28-34) along with ambiguous episode describing Solomon’s marriage diplomacy with Egypt. Solomon is indeed bestowed unequivocally with divine wisdom, but an assessment of Solomon’s execution of wise judgement need not be similarly unequivocal. There are indicators here that Solomon is an immature monarch who displays promise but who may nonetheless fail to measure up to the Deuteronomic demands of a just monarch.

21 De Vries, 1 and 2 Chronicles, 55.
22 Leithart, 1 & 2 Kings, 73.
23 De Vries, 1 and 2 Chronicles, 55.
As I will suggest below, one finds a more mature (and yet still incomplete) expression of Solomonic wisdom in the building of the Temple. There is, as Gary Knoppers observes, an anti-Temple aspect to the Deuteronomistic narrative as it draws to its anti-climactic close, but the negative evaluation of the Temple must not be “confused with the Deuteronomistic stance toward this downfall.” He argues:

the Deuteronomistic analysis of history is profoundly concerned with cultic orthopraxis and cultic heteropraxis. By devoting so much attention to the central sanctuary, the history of the monarchy underscores the Temple’s importance. Both the divine election to build and the divine election to destroy affirm the shrine’s unique status.24

As I will note further below, the structure of the text highlights the Temple construction as a climax of the narrative before the rapid descent towards the narrative of later monarchial anti-climax. It is entirely reasonable to assume that the Temple construction narrative is provided for careful critical assessment by the reader—or perhaps more accurately, the worshipping community who reads this text together—as to whether it is an exhibition of Godly wisdom and of what sort it is. Further, this structuring seems to suggest that the primary subject of this narrative is not Solomon, but the Temple. If this is true, then appropriation of 1 Kings in moral discourse (especially of the variety noted above) may benefit from a shift of focus which may be enabled through an canonically refocused study of Solomon.

3. Unbalanced Human Work-Relationships: Workers in 1 Kings

While I have presented a more measured posture towards Solomon above, as the Solomonic narrative proceeds to the new King’s work at Temple construction, we find a transition from ambiguity to dissonance, as the character of work on display in chapters five through twelve ring harshly against the setting provided by Exodus. The first dissonant note that rings in chapter 5 comes with the volition of workers narrated there, with regards to both materials and workers. In dramatic contrast to the freely offered labour and lavish provision which provides the materials for the Tabernacle, 1 Kgs 5 provides a detailed narration of Solomon’s enlisting of slave labourers and collusion with the King of Tyre in expropriating materials. We read in 1 Kgs 5:13 a chilling fulfillment of the warning offered in 1 Samuel, mentioned above: “King Solomon drafted forced labor out of all Israel, and the draft numbered

---

30,000 men” (1 Kgs 5:13 ESV). Discussions of slavery in the ANE are complex, and it is not my intention to enter fully into the debate over the peculiar form of the slavery represented here, particularly as to whether (as chapter 9 later suggests) the conscripts are Israelites.25 Regardless of the magnitude of this transgression, Solomon’s use of conscripted labour fails to establish the same conclusive break with slavery that is so clear in Exodus. The absence of explicitly demonstrated free agency here stands out particularly as the command that the people be mindful of their experience and deliverance from captivity features as a regular refrain throughout the Hebrew Scriptures, “you shall remember that you were a slave in (the land of) Egypt.”26 A close reading of the text of 1 Kgs 5 reveals elements of tension which prevent an unequivocal denunciation of Solomon, but nevertheless affirm my conclusion here. First, verse 13 is directly preceded by a text which seems to present Solomon’s work with Hiram as a validation of his wisdom: “And the Lord gave Solomon wisdom, as he promised him. And there was peace between Hiram and Solomon, and the two of them made a treaty” (5:12). The progeny of wisdom and peace seems to be a relationship which supplies the Temple materials, and yet the later clarification offered with respect to Hiram of Tyre in 1 Kgs 9 shows an awareness of the tension latent in the earlier text, suggesting that this relationship is not such an unambiguous site for “wisdom and peace” after all, and perhaps also not a text to be read as lacking nuance. A proposed structure for the text of 1 Kgs 1-12 by Amos Frisch is helpful here, as he suggests that the Temple construction functions as the climax of the account which is then surrounded by the collaboration with Hiram, structuring the narrative as follows:27

| A. The Beginning of Solomon’s Reign: From Adonijah’s Proclamation of Himself as King until the Establishment of Solomon’s Reign | 1.1-2.46 |
| B. Solomon and the Lord: Loyalty and the Promise of Reward | 3.1-15 |
| C. The Glory of Solomon’s Reign: Wisdom, Rule, Riches and Honour | 3.16-4.34 |
| D. Towards Building the Temple: Collaboration with Hiram, and the Corvée for the Temple | 5.1-18 |
| E. The Building and Dedication of the Temple | 6.1-9.9 |

25 For an exhaustive survey including contrasts with other ANE and GR societies, see Markus Barth and Helmut Blanke, The Letter to Philemon, Critical Eerdmans Commentary (Grand Rapids: Eerdmans, 2000), chapter 1 “The Social Background: Slavery at Paul’s Time.” With specific regard to 1 Kings, see also Provan, 1 and 2 Kings.

seen in the light of this structure the initial report on Solomon’s relationship with Hiram—which comes across as largely positive—must be read in apposition to the later revisiting of this relationship in the chiastically related text of 9:10-25 which notes the complexities of trans-national and trans-religious political relationships and their impact on the liturgy of Israel. Picking up this tension in chapter 9, Provan suggests,

Themes from chapters 4-5 are picked up now in a way that hints, not of wisdom, but of foolishness (Solomon’s dealings with Hiram, 9:10-14 etc.; his use of forced labor, 9:15-23; foreigners coming to listen to his wisdom, 10:1-13). Other material (e.g., 9:24; 10:26) reminds us of foolishness already revealed in 1 Kings 1-8. All in all we are forced to be aware, even as we hear of accumulating gold and proverbial splendor (cf. Matt. 6:29), that we are reading the last chapter of the story of Solomon’s “golden age”—that he is heading very shortly for a fall.”

Though some scholars have noted that the identity of these labourers is left unclear, even if one affirms the later clarification in 1 Kgs 9 that these are conscripted Canaanites (and not Israelites which would be a clear violation of Deuteronomic law) their involvement offers a sinister anticipation of the collusion with the nations, like Solomon’s taking a wife from Egypt, which is to dominate the later part of the narrative in 1-2 Kings.

A second crucial difference between the Tabernacle account and the Temple in 1 Kings which rings dissonantly can be found with respect of agency. In 1 Kings, we find what seems by comparison a solipsistic account of Solomonic agency in the building process. While the narrative in Exodus begins with an interaction between Moses and YHWH and then draws an increasingly wide cast of Israel into the production of the Tabernacle, 1 Kings chapter five begins with a conversation

---

28 Provan, 1 and 2 Kings, 84.
between two monarchs: Solomon and Hiram of Tyre and when a wider cast is drawn into the narrative their participation in Temple construction lacks the clear sense of agency presented in Exodus.

While in some contrast to those workers described in chapter five, those involved in chapter six are not said to be conscripts, what stands out in this chapter is the dramatically reduced cast of participants. In Exodus, divine wisdom is bestowed on the artisan Bezalel and his assistant, and then this wisdom radiates outward among the people of God as they teach others about the craft involved in Tabernacle construction and, by extension, Hebrew “work ethics” at the same time. In this way, working wisdom can be seen to ripple outwards throughout the people of God as they construct the place of worship. In contrast, the Temple is a rather solitary affair. The text opens, as I have suggested above, with two monarchs and it is clear that this narrative provides more detail about their management of the building process than of the experience of the remainder of Israel. Even the artisan Hiram, displaying obvious resonances with Bezalel, is nonetheless constrained only to the making of Bronze implements (1 Kgs 7:40, 45); Solomon reserves the gold smithing for himself. Further, the lack of narrative verbosity describing the nature of the work performed provides a rhetorical emphasis on their diminished work participation. While we can presume that others were involved in the work because we read the details of their conscription and recruitment, we read nothing about the content of their work, while in contrast Exodus exults in the details of the labour of all the people involved. Even when all the people of Israel make a showing after construction to join in the great celebration in chapter eight, this is hosted and provided for by Solomon, further emphasising the divestment of the people. That they are invited guests demonstrates the benevolence of the monarch and not the participation of the people in this liturgical celebration.

Jackson reads this lonely cast of characters in 1 Kings as an instance of

---

29 I have alluded to the collusion between these two above in my analysis of the Tabernacle. It is worth noting that Leithart reads Solomon’s interaction with Hiram of Tyre as one of outreach: “1 Kgs. 4 shows again that Solomon is also a greater Adam. Beyond Adam, he eats from the tree of wisdom and demonstrates his wisdom by organizing the kingdom, in his relations with Hiram of Tyre, and in building the temple (Exod. 31:3). All these displays of wisdom bring him glory beyond the glory of any kings of his time, a partial restoration of the bright radiance of Eden” Leithart, 1 & 2 Kings, 49.

managerialism.\textsuperscript{32} I have attempted a more moderate reading here—keeping open an initial hope for the ambiguous promise of Solomonic kingship—as universalising too stark a portrait of Solomon can undermine our reading elsewhere in the Hebrew Scriptures as shown particularly with my study below of Chronicles where the depiction of Solomon is reframed in subtle but significant ways. This is the case, I think, with Jackson’s reading, as he assumes that any text which is lacking narrative attention to the details of manufacture bears marks of the influence of a managerial redactor. This inhibits Jackson’s reading of other texts, such as Hosea, where the concern is not on the particulars of the building process, but of the theological importance of the Temple. Given this possibility, I have attempted to demonstrate particular features of the text here which makes it stand as conspicuous, and one can also read Jackson’s observation as hinting at a theological distinction being made here. While Exodus suggests that neither worship nor work are meant to function with a narcissistic focus on the leader, 1 Kings shows us the all-encompassing consequences of such an approach. Just as the account of wisdom in Exodus did not overwhelm the agency of the workers, so too, the bestowal of wisdom on Solomon does not prevent him from what is ultimately rebellion, fall, and disgrace. This concern over agency and participation comes to the fore, as I shall note further below, in the post-exilic rebuilding narratives including Haggai 1-2 and Ezra 3-6 where one finds a renewed emphasis, harkening back to the Tabernacle, on the free and willing participation of all Israel, where foreign contractors are not co-opted for temporary work, but are invited into the doxological procession as full participants.

The Taylorist emphasis on the scientific design of work process and organisational management has cultivated a deep separation—most pointedly on an epistemological level—between management and work in contemporary firms. In this way of thinking, exemplified in many of the appropriations of Solomonic “wisdom” in the business literature I surveyed above, wisdom is reserved for a design process which is abstracted from the work of making. In contemporary practice, this separation works out not merely on a procedural level, but also on the level of personnel, such that designers quite often have little (or nothing) to do with the actual fabrication of their products. Instead, whether this be the design of a carefully ordered industrial division of labour or the design of specific objects, the actual fabrication is performed by workers whose bodies are co-opted for their

\textsuperscript{32} Jackson, “Enjoying the Fruit of One’s Labor: Attitudes Toward Male Work and Workers in the Hebrew Bible,” 311.
physical capacities but not their mental abilities and this abstraction is intensified by the process of outsourcing whereby manufacturing can happen thousands of miles from the design of a prototype. The recent advent of inexpensive 3-D printing enables makers to literally produce a material prototype of their design without involving their hands in direct way in manufacturing. Part of the justification behind this transformation was the conviction that with advances in industrial technology human involvement in physically-involving occupations would decrease as machines became increasingly able to perform and automate these tasks leading to the so-called “end of work.” Yet more than a century later, the end of work appears to be nowhere in sight and instead the human experience of work has been dramatically subordinated to the dreary management of machines which mass-produce bagels, car tires, clothing, and bandages. One consequence of this change is a sort of design narcissism. Citing Donald Kuspit, Michael Northcott suggests that this vision has also influenced contemporary Neo-avant garde artistic production, “Neo-avant garde art is in effect a celebrity cult, sustained by charismatic individuals and their moneyed backers. The object of veneration is not the real experiences that artistic representation may evoke but the primordiality of heroic experience and insight resident in the presentation of art itself…. This is truly “art for art’s sake” and nothing more; it points nowhere but narcissistically back on the ego of its creator who claims a privileged experience of reality which he wishes to share through his creative acts with those who encounter them.” This narcissism points to a deeply embedded dysfunction latent in making culture, as Northcott observes, “it may be no coincidence that postmodern art installations often rely upon technological devices and competences more associated with industrial manufacture than with the traditional skills and crafts of aesthetic making.”

As an affirmation that the dichotomisation of design and management makes for less satisfactory work, many contemporary manufacturing firms, particularly in the automotive industry, have begun to reshape their production towards a model

---

36 Ibid., 222. See also Sennett, *The Craftsman*, 65-74.
pioneered in Japan by Toyota, called lean production. In the first major study on Lean Production Womack notes the contrast with mass-production:

The mass-producer uses narrowly skilled professionals to design products made by unskilled or semiskilled workers tending expensive, single-purpose machines... the lean producer, by contrast, combines the advantages of craft and mass production, while avoiding the high cost of the former and the rigidity of the latter. Towards this end, lean producers employ teams of multiskilled workers at all levels of the organization and use highly flexible, increasingly automated machines to produce volumes of products in enormous variety.37

This step back-towards craft work also has implications for the way people work: “most people—including so-called blue-collar workers—will find their jobs more challenging as lean production spreads. And they will certainly become more productive. At the same time, they may find their work more stressful, because a key objective of lean production is to push responsibility far down the organizational ladder.... Lean production calls for learning far more professional skills and applying these creatively in a team setting rather than in a rigid hierarchy.”38 Because it is less structured and more nimble, Womack argues, the lean producing manufacturer is able to focus towards excellence rather than just “good enough.” While it may represent a positive move back towards craft, lean manufacturing is not without its problems, and subsequent studies since Womack’s enthusiastic report in 1990 have noted how in spite of the stated contrasts with mass-production, lean production is hardly a reconceptualisation of work design. There is, as Jones, Latham and Betta observe, a large critical qualitative literature which substantiates the “distance between managerial rhetoric and reality, emphasising the exploitative rather than emancipatory aspects of lean systems.”39 In one example, a study by Graham of the Subaru-Isuzu plant in Lafayette, Indiana, “found that the concept of industrial citizenship carried no connotations of industrial democracy. The only issue on which workers had ever voted was ‘whether to have pizza’ as their snack of choice.”40 In a UK-based study of the lean Vauxhall-GM and Rover-BMW plants, Stewart, et al.

38 Ibid., 14.
40 Cited in Ibid., 1630.
“found that only 31% of respondents felt that they exerted either a great deal or a fair amount of influence over the way they carried out their work; only 34% indicated the same for control over sorting out problems that prevented them from doing their jobs; 62% felt that they could vary the pace of their work very little or none at all and 73% found it difficult to change the things they did not like about their jobs.”  

Richard Sennett argues that a turn back to the craft workshop might offer one way of re-prioritising worker agency. This turn back towards craft, according to Sennett, comes at the expense of “art.” His account of the contrast between the two serves to demonstrate some of the trouble with too easy a recourse to “art” in modern theological accounts of work as poësis which I have sought to problematise in this dissertation. As Sennett notes, “The two are distinguished, first, by agency: art has one guiding or dominant agent, craft has a collective agent. They are, next, distinguished by time: the sudden versus the slow. Last, they are indeed distinguished by autonomy, but surprisingly so: the lone, original artist may have had less autonomy, be more dependent on uncomprehending or willful power, and so be more vulnerable, than were the body of craftsmen.” On this basis, Sennett argues for a renewed emphasis on the workshop as a social space: “Workshops present and past have glued people together through work rituals, whether these be a shared cup of tea or the urban parade; through mentoring, whether the formal surrogate parenting of medieval times or informal advising on the worksite; through face-to-face sharing of information.” In some sense, Sennett’s argument is that a true affirmation of the sociality of work will result in a revalorisation of craft.

Returning to my study of Solomonic wisdom in 1 Kings, I wish to argue for a de-centred account of biblical wisdom which may provide a complementary insight for the ethics of work. In addition to the thick account of the divine gift of wisdom in Exodus, already surveyed above, the book of Proverbs also seems to grant an egalitarian availability for the gift of wisdom. Lady wisdom offers a broad invitation to “Whoever is simple…. Leave your simple ways, and live, and walk in the way of insight” (Prov 9:1–6 ESV). De-centring our appreciation of wisdom in scripture frees us from the need to valorise the account of Solomon, as his gift of wisdom does not

42 Sennett, The Craftsman, 73. Though lamentably Sennett does not engage with the literature in craft scholarship, these insights can be linked to a number of scholars: see critique and literature survey in Paul Greenhalgh, “Words in the World of the Lesser: Recent Publications on the Crafts,” Journal of Design History 22 (4): 401-11.

43 Sennett, 73.
exhaust the possibilities already on offer in the Hebrew Scriptures. As Ellen Davis has pointed out, the book of Proverbs concludes with an account of a wise craftswoman and wife. The ominous warning which hangs over Proverbs is inverted with a surprisingly positive answer to the rhetorical question, “An excellent wife who can find?” So wisdom is not purely the province of Kings, and further, craft-wisdom seems to be freely available to all Israel, by Solomon’s own admission. These occurrences serve well to de-centre the account of wisdom in the Hebrew Scriptures. Indeed, one must deny that wisdom is something to be granted exclusively to Israelite Kings or to be exercised in the service of statecraft, but a careful reader also cannot assert that wisdom is reserved exclusively for a proletariat. Instead, biblical wisdom represents something far wider. It is broadly available and broadly encompassing. A de-centred reading of wisdom, in aggregate, commends caution in focusing “wisdom” on wise management (as may be the case with appropriations of Solomonic wisdom in work ethics) at the expense of wise work. Indeed, in this way Solomon serves as an example of an imbalance in the dialectics I have identified in the last chapter. He is one who masters materials and workers without being “mastered” by them in turn.

4. Unbalanced Material Work-Relationships: Material Culture in 1 Kings

A close study of the material culture of Solomon’s Temple building sounds an additional dissonant note with respect to Solomon’s exercise of wisdom and the account of work on display in Kings. While much is made by scholars of the presence of conscripts in chapter five, many seem to miss the impact of the material details in the narrative in these chapters. In one example, Provan dismisses these details outright and fails to note the comparison: “Much is obscure to us as readers who stand at such a distance from the authors of the text, and we shall not pause at any length to puzzle over the architectural detail or marvel at all the glitter and the gold. Little that is important for interpreting the book of Kings hangs on any such detail.” In fact, as I have suggested repeatedly above, the material culture of worship does carry theological freight and these details carry great significance in enabling the reader to appreciate the subtle critique at work here.

For this final point of contrast I note the significance connoted by the use of

---

42 Though the Solomonic authorship of Proverbs is hotly disputed, it is worth noting that this is the traditional position which supports the Canonical scope in which Proverbs occurs.

materials in the two narratives. As I have noted above, the Tabernacle is constructed in the midst of an economy that maintains a memory of the constrained wilderness manna-economy such that even overwhelming generosity is met with prudential reserve. In contrast, Solomon’s use of materials is lavish (contrast 1 Kgs 4:22-23). Materials for the Tabernacle are gathered from among the people (presumably in part from their plunder of the Egyptians), while materials for the Temple are expropriated in a contract with Hiram, the King of Tyre, as noted above. Later, those same materials are re-appropriated after 1 Kgs 9 “serving mainly as a source for gold and silver for Davidic kings to pay off invading Gentiles.” In some contrast to the status of the materials used in Exodus, in 1 Kings a shadow hangs over the precious materials, particularly gold, which mysteriously appear for Solomon’s appropriation in the Temple construction. Not only are we unclear about the source, but the text marks a significant transition in the displays of prosperity and the meaning of value which lies behind them. Provan suggests:

Why, indeed, is there no mention of gold at all in the description of Solomon’s glory in chapters 4-5, where prosperity is described rather in terms of food? And why does gold appear in such abundance here, after the solemn warning of 9:6-9 about “turning away from God,” and in company with other material that leads us to expect just this “turning away” of Solomon (cf. The commentary on 9:15-25; 10:26-29)? These are interesting questions, particularly in view of texts like Proverbs 30:8 and Deuteronomy 17:17. Excessive wealth brings with it the danger of apostasy.

Enhancing our attention to the brevity of the mention of gold in 1 Kings is a later reference in Ezra 7:15–16 which in spite of other allusions to 1 Kings in that book, seems in this case to skip past the Solomonic episode and return to the Exodus for its form with the free offering of the people as a source for materials (cf. Exod 35:5, 35:21–22 etc.): “and also to carry the silver and gold that the king and his counselors have freely offered to the God of Israel, whose dwelling is in Jerusalem, with all the silver and gold that you shall find in the whole province of Babylonia, and with the freewill offerings of the people and the priests, vowed willingly for the house of their God that is in Jerusalem” (ESV). Ezra matches the strong emphasis in Exodus on the free-will nature of the offering and the extended dialogue about its provenance. This arrival of gold in 1 Kings also seems to carry with it a change in attitude. Provan summarises: “The influx of food described in chapters 4-5 has been replaced by an

---

46 Leithart, 1 & 2 Kings, 20.

47 Provan, 1 and 2 Kings, 85.
influx of luxury goods (vv. 2, 10-12, 22, 25), and Solomon’s use of all this wealth is entirely self-indulgent (vv. 14-29).\footnote{Ibid., 87.} The materials which constituted the Tabernacle carried in its finest materials a persistent memory of the freedom of God’s people and their absolute deliverance from slavery, while Solomon’s enterprise draws in materials with a decidedly more ambiguous status.

Turning from the fate of the Temple materials seen generically to some specific analysis, another important contrast between the work of Solomon and that of Moses is revealed upon close inspection of their use of timber. In Exodus, there is a regular repetition that the wood to be used in construction is to be a native timber: Acacia\footnote{Exod 25:5, 10, 13, 23, 28; 26:15, 26; 27:1, 6; 30:1, 5; 31:5; 35:7, 24, 33; 36:20, 31; 37:1, 4, 10, 15, 25, 28; 38:1, 6}*, whereas the timber used overwhelmingly in Solomon’s construction is imported Lebanese cedar\footnote{1 Kings 6:9-10, 15-16, 18, 20, 36}, to the extent that one of the buildings in his palace complex is termed in 1 Kgs 7:2 “הַיָּרֶם הַלֶּבּוֹנֶן” [byt y ’r hlbwnn =“Lebanon Forest House”] and Hiram receives twenty towns in Galilee in exchange for the vast amount of imported Lebanese cedar he has shipped in (1 Kgs 9:11).\footnote{For a summary of research on the buildings in Solomon’s palace complex, see Simon John de Vries, *1 Kings*, WBC (Waco, Tex.: Word Books, 1985), 102.} It is also interesting to note that the “forest house” is the location of the royal armoury, indicated by mention of “[nsq byt hy’r =“weapons of the house of the forest”] in Isa 22:8 and judgement proclaimed in Jer 21:14 of “kindling a fire in her forest” may be a reference to the destruction of this building. Some caveats with regards to my negative reading of the presence of cedar in 1 Kings need to be noted, particularly in light of my later explication of cedar in eschatological perspective.\footnote{I examine the significance of materials in the construction account in 1 Chronicles below in section 7.2, “Reframing Abundance and Inclusiveness in 1-2 Chronicles” in chapter 3.} First, Solomon does also use Cypress, which is native to Israel and still grows there in abundance.\footnote{See “Flora,” *AYBD*, 2:805} Similarly, while timber to be used in the sacrifices mentioned in Leviticus is in large part described generically, presumably whatever is at hand, there are with occasional references to the use of cedar.\footnote{Lev 1:7-8, 12, 17; 3:5; 4:12; 6:12; 11:32} Keeping this in mind, what we can

\footnote{Lev 14:4, 6, 49, 51-52, Num 19:6.}
nevertheless conclude from this discussion is that the preciousness of Cedar was well-known by Israel and this knowledge is narrated well before the time of Solomon. More to the point, along with the use of gold and other rare and precious minerals and stones (which were not available at hand or native to the area) the trouble with Solomon is not simply that he uses cedar but the impulse towards extravagance and excess which generates this expropriation and the culture which surrounds it. This is affirmed even more powerfully by the fact that Cypress, a native timber, is also included in Solomon’s imports via Hiram of Tyre (cf. 1 Kgs 5:8). The narrator’s point is clear: either the local Israelite stock was so exhausted by this project that Solomon had to augment available timber, or even worse, Solomon was so keen to expropriate resources that in spite of its native, and presumably available status, Solomon chooses to use the forests of other nations in the building of his Temple and palace complex. This was a profoundly anti-ecological undertaking. Even the logistics involved provide an ancient account of international shipping. Irene and Walter Jacob note the process involved in such importation, “The large timbers were floated 200 miles down the coast to Jaffa and hauled another 25 miles across land to Jerusalem.”56 To sum up the contrast: In Exodus, we find the consecration of available materials, while in the Solomonic Temple (and in Jeremiah as I will note below) one finds the unbounded importation of non-indigenous materials.

Just as modern readers have often ignored the rich and suggestive material details scattered across Christian Scripture, so too have writers on work tended to neglect the material dimension of work, whether this be the raw materials used by workers or the phenomenology of finished products. Bruno Latour suggests that this neglect is symptomatic of a broader lacuna:

Much like sex during the Victorian period, objects are nowhere to be said and everywhere to be felt. They exist, naturally, but they are never to be given a thought, a social thought. Like humble servants, they live on the margins of the social doing most of the work but never allowed to be represented as such. 57

In response, Latour argues that the narration of a robust account of work requires that we expand our conception of the types of work actors and agency to include objects. This expansion offers a way of taking into account a more subtle version of the way

things act upon workers, as Latour explains it, “In addition to ‘determining’ and serving as a ‘back-drop for human action’, things might authorize, allow, afford, encourage, permit, suggest, influence, block, render possible, forbid, and so on.”

Because the ANE work context was an overwhelmingly agrarian one, this immediacy of the materiality of work and the contingency of workers upon “things” was likely not as difficult to recapture. Because the abstraction of human agency and the denial of limits is a firmly embedded feature of the modern age, reconceptualising work to take a fuller account of materiality for modern workers is a more complicated task. To take seriously the impact of things upon our attempts to perform work which is coherent and moral also involves something of a break with what are traditional modern theoretical conceptions of work, as Latour notes that this account “is clearly at odds with the explicitly asymmetric program [of work agency] offered in Weber.”

Yet the consequences are substantial, as contemporary work offers a stunning example of Solomonic expropriation writ large. In a now classic 1972 report, The Limits to Growth, a team of MIT analysts used computer modelling to map human consumption patterns against measurable limits of non-renewable resources among several other factors including food production, population growth, and pollution. While the most publicised resource limit in the current discussion may be petroleum with discussions of peak oil, there are a number of other resources whose global capacity is also being tested, including phosphate (used in fertiliser), coal, aluminium, iron and chromium such that we the situation on the horizon may best be described in Richard Heinberg’s words as “peak everything.” The authors of Limits to Growth concluded that if a “standard-run” scenario persisted, unchecked growth would lead to a condition of global overshoot which in turn would likely lead to societal and economic collapse late in the 21st century. More recent studies have

vindicated the authors’ suggestions and in some cases observed that we may already be in a situation of overshoot on a number of resources, particularly with regards to petroleum usage and the nitrogen cycle.

These twin analyses of Solomon and contemporary resource crises demonstrate that neither modern industrial societies or Ancient Near-Eastern agrarian societies are necessarily virtuous moral environments for work. Even though we in the modern context have access to tools which can measure resource availability and quantify pollution and those in the pre-modern context had a more immediate experience of their relation to material we find that people in both contexts are at risk—as I have suggested with this reading of the building of the place of worship—of “overreach”. Yet the account in Christian scripture preserves a sensibility which can nurture more moral forms of work which may acknowledge and work within limits which have been set by the Creator. Several recent studies and manifestoes on work have proposed a reconceptualisation of the worker’s relationship to material in terms of respecting the limits of resources and avoiding pollution and these scholars provide a commendable model of work which resonates with the account in Christian Scripture.

In their book Cradle to Cradle, Braungart and McDonough note how early industrial approaches to manufacturing betray an ignorance or disinterest in natural limits: “Resources seemed immeasurably vast. Nature itself was perceived as a “mother earth” who, perpetually regenerative, would absorb all things and continue to grow.” This led to the development of a design paradigm that persists to the present day which they call “Cradle-to-Grave” where “more than 90 percent of material extracted to make durable goods in the United States becomes waste almost immediately.” In the most insidious example, products are designed with “built-in obsolescence” such that they last for a limited time and consumers are encouraged to replace the depreciated product with a new model rather than repair it when broken

---

64 McDonough and Braungart, Cradle to Cradle: Remaking the Way We Make Things, 25.

65 Ibid., 27.
and remain satisfied with it while it is functional.\textsuperscript{66} In contrast to the tendency for the past two decades to merely fine-tune existing design towards “eco-efficiency” Braungart and McDonough propose a new paradigm for design which they call “Cradle-to-Cradle.” In this conception, they suggest, designers should work first to eliminate waste, which they argue may be accomplished by designing products to be composed exclusively of biological and “technical nutrients.” The former is designed to be be composted so that biological nutrients avoid landfills and can be used productively in food production and the latter include non-organic technical components are engineered to be disassembled and re-used for new products, thus reducing the need to extract raw materials.

While Cradle-to-Cradle design takes into account the industrial designer’s perspective, a similar emphasis on reconceptualising work to avoid waste has been offered by Matthew Crawford who advocates for product repairability, so that consumers can also re-engage with product maintenance and limit arbitrary obsolescence. In Crawford’s analysis, repair provides not only the grounds for less waste, but also a repair of the relationship between persons and things:

A decline in tool use would seem to betoken a shift in our relationship to our own stuff: more passive and more dependent. And indeed, there are fewer occasions for the kind of spiritedness that is called forth when we take things in hand for ourselves, whether to fix them or to make them. What ordinary people once made, they buy; and what they once fixed for themselves, they replace entirely or hire an expert to repair, whose expert fix often involves replacing an entire system because some minute component has failed.\textsuperscript{67}

In this way repair work emphasises an aspect of craftsmanship, as Sennett puts it, “objectification,” in that it forces the worker back towards consideration of objects.\textsuperscript{68} In a substantial scholarly study of repair work, sociologist Doug Harper goes so far as to argue that the work of repair has preserved a more ancient sense of craft even while design and manufacture have become rationalised with the rise of mass production and ever-increasingly divided labour which promote de-skilling. Repair work, according to Harper, preserves a unique tacit epistemological dimension, “fixing, in a general sense, extends a yet earlier mind and method, that of the original

\textsuperscript{66} Cf. Slade, Made to Break: Technology and Obsolescence in America.

\textsuperscript{67} Crawford, Shop Class As Soulcraft: An Inquiry Into the Value of Work, 2.

\textsuperscript{68} Richard Sennett, The Culture of the New Capitalism (London: Yale University Press, 2006), 104.
fashioner.” In this way, the making of repairable objects may also offer a means by which persons can recapture a form of edifying work which has in many contexts been lost.

Moving from the first emphasis in “cradle-to-cradle design” on eliminating waste, Braungart and McDonough’s second design principle is an emphasis on locality. In this way, they argue that designers should:

connect them [human systems and industries] to local material and energy flows, and to local customs, needs, and tastes, from the level of the molecule to the level of the region itself… We consider how the chemicals we use affect local water and soil—rather than contaminate, how might they nourish?—what the product is made from, the surroundings in which it is made, how our processes interact with what is happening upstream and downstream, how we can create meaningful occupations, enhance the region’s economic and physical health, accrue biological and technical wealth for the future.”

Work which seeks to operate within this sensibility seeks to make use of locally grown and harvested materials and design, and in a corresponding way, it also may rely, as Gorringe has argued, upon vernacular design which is adapted to local bioregional realities. In his account of the built environment, Gorringe notes how, “The vernacular, however, represents response not just to climate and materials, but to social form and tradition…. Vernacular architecture manifested no ‘libido dominandi’, none of the desire to dominate which Augustine believed characterised the earthly city.” Ecological design is, in this appraisal, a proper response to the theology of creation. In my reading, Christian Scripture also possesses this sensibility of “things” and if one takes this into account, we may see how in transcending limits, Solomon’s construction process demonstrates an unbalance with regards to the second (material) dialectic I have outlined in the previous chapter. Solomon’s attitude towards materiality resonates with the modern designer’s supposed transcendence of bioregional limits and the related neglect of the contingency of worker to material. We can see that this neglect by Solomon expresses a denial of contingency in two related but slightly different ways eschewing both region (by expropriating from Tyre) and the proper limits of

---

71 Gorringe, A Theology of the Built Environment: Justice, Empowerment, Redemption, 92.

72 Ibid., 107.
material.

In this chapter thus far, I have established several of the key ways in which Solomon’s building project evinces the dissolution of a moral relation between work and worship and how this in turn is marked by the unbalancing of two dialectics: among workers and between the worker and materiality. While the text of Exodus provided paradigms for positive moral reflection, Kings offers the inverse of this message, expressed in 1 Kgs 9:6-7:

But if you turn aside from following me, you or your children, and do not keep my commandments and my statutes that I have set before you, but go and serve other gods and worship them, then I will cut off Israel from the land that I have given them, and the house that I have consecrated for my name I will cast out of my sight, and Israel will become a proverb and a byword among all peoples.

Here one finds an intrinsic connection between the land, representative for the whole economy of Israel and the house of worship, such that when sin pervades the political economy of Israel, their place of worship will (in this case literally) disintegrate.

5. The Legacy of Solomon: From Unrighteous Temple to ‘Homes’ in Jeremiah

I turn now to Jeremiah to vindicate my suggestion that with the abandonment of moral work on the temple, a broader moral relationship has been broken. Particularly we find this exhibited with Jeremiah’s attention to the work of Solomon’s descendant, the king Jehoiachim’s in “house-building.” In this case, we find the same immorality which was directly problematised in the Temple construction account in 1 Kings appearing with regards to more domestic building projects. While Solomon’s palace is indirectly problematised, Jeremiah’s critique of Jehoiachim is unmissable.73 Similarly, where the relation of work and the place of worship was ambiguous (at best) with Solomon’s project, we find a straight-forward condemnation in Jeremiah. This is a consequence of the dissolution of the moral relationship which I have identified in the material above: where sin has destroyed the building of worship, other sorts of work appear disordered as well.

While my study will focus on the royal construction critique presented in Jer 22:1-7, some brief background is appropriate to set this text in its narrative context. Fulfilling the violation noted above, a consistent theme in Jeremiah is the relinquishment of the freedom gained in Exodus from Egypt and by extension the

---

73 For the classic study on Solomon’s palace, see Walter Brueggeman, The Prophetic Imagination (Minneapolis, MN: Fortress Press, 2001).
relinquishment of free labour, as a consequence for sinful practice. This is put
paradigmatically early in Jer 2:20: “For long ago I broke your yoke and burst your
bonds; but you said, ‘I will not serve.’ Yes, on every high hill and under every green
tree you bowed down like a whore.” 74 Lest the reader underestimate the sinful acts
which have led to this fate, it is important to note the narrative progression that has
led up to Jeremiah’s proclamation in chapter 22. This text is set narratively at the
Temple (19:14-20:18) after Jeremiah has returned from a visit to Topheth, the high
place where child sacrifices were likely being practiced. 75 Against the backdrop of
manifest evil occurring in the high places, Jeremiah pronounces judgement against
Israel: Jer 19:14–15 echoes the earlier judgement oracles in 19:3-9 and ch. 11-13 76
and he is immediately subjected to violent retribution by Pashhur the priest (20:1–2).
Jeremiah responds to this demonstration of priestly complicity in the evil of
Jerusalem with an oracle of judgement specifically against Pashhur (20:3–6) which
intimates the broader judgement to which Israel is to be subjected at the hands of
Babylon and the confident tone of this judgement is juxtaposed with the subsequent
confession and lament by Jeremiah (20:7-18).

Jeremiah 22, then, is set amidst a volley of oracles against the evil kings of
Judah and arriving at this chapter we find that Jeremiah offers words of judgement
specifically against Jehoiachim, a king who appears near the degenerative end of the
downward spiral of the narrative of the Deuteronomist’s tale (cf. 2 Kgs 23:34–
24:16). Jeremiah has a great dislike for Jehoiachim, as he is, according to Jeremiah,
responsible for the undoing of the (albeit temporary) righteousness of the people of
Israel under his father Josiah. He has no regard for the scriptures (rediscovered and
celebrated by his father, cf. Jer 36:21-26) and foreign cults reappear during his reign
(cf. Jer 7:9, 18, 31; 11:9–13). In many ways, Jehoiachim might be considered
Jeremiah’s arch-enemy. This prophetic critique offered by Jeremiah in chapter 22
focuses on two very concrete aspects of building which are emblematic of
Jehoiachim’s unrighteousness and resonate with the aspects of the Solomonic

74 The LXX renders this with second person pronouns, significantly changing the meaning, thus
NET: “long ago you threw off my authority and refused to be subject to me.” But as Craigie notes in
his WBC commentary, “The reading is possible, but the first-person form suits the context” Peter C.
This textual issue does not undermine the broader point I am making here regarding the
role of theme of free labour inverting into slavery in the judgement oracles of Jeremiah, but rather
impinges on my usage of this specific text. For more relevant analysis of this specific text, see Ibid.,
36-7.

76 See Ibid., 264ff, for further detail on the literary connection between these passages.
building project portrayed above.

The text opens with Jeremiah’s exhortation, “Woe to him who builds his house by unrighteousness, and his upper rooms by injustice” (Jer 22:13a ESV). This is followed by two explications of unrighteous building: slavery and excess. We find the condemnation of slavery in the latter half of v. 13, “who makes his neighbor serve him for nothing and does not give him his wages.” Even more so than in 1 Kings, with the direct ascription of this practice to ‘his neighbor’ the unrighteousness of this practice stands out in sharp relief against its clear allusion to Deut 24:14–15. The second condemnation, of excess, is less direct, but nonetheless present in this text. Thompson notes the implicit message here:

One wonders where the king obtained funds to build his spacious buildings, since he was required to pay heavy tribute to his Egyptian overlord (2 K. 23:33–35). At least the labor cost him nothing, because his fellows worked for nothing (hinām) and did not receive a wage (pō’al) for their work. Jehoiakim, who was only twenty-five years old when he began to reign and only thirty-six when he died (2 K. 23:36), was evidently a thoroughly spoiled and self-indulgent young despot.78

The directness of Jeremiah’s statement leaves no doubt that excess is as central to Jeremiah’s critique as slavery: “who says, ‘I will build myself a great house with spacious upper rooms,’ who cuts out windows for it, paneling it with cedar and painting it with vermilion. ‘Do you think you are a king because you compete in cedar?’” (Jer 22:14-15a ESV). In both aspects, excess and slavery, we find that the moral relationship between work and worship—previously cultivated in the construction of the place of worship and now shown to be broken even in the building of “homes”—has dissolved and Israel is left to face the consequences of this moral chaos.

As the account of the Prophet Jeremiah draws to a close, the Temple—intended, like the Tabernacle, to function as a place where the people of Israel could regularly engage in practices which promoted a moral synthesis of worship and labour—is dismantled. The narrative provides a slow account of this final foreclosure:

In the fifth month, on the tenth day of the month—that was the nineteenth

77 “You shall not oppress a hired servant who is poor and needy, whether he is one of your brothers or one of the sojourners who are in your land within your towns. You shall give him his wages on the same day, before the sun sets (for he is poor and counts on it), lest he cry against you to the LORD, and you be guilty of sin.” (Deut 24:14-15 ESV).

year of King Nebuchadnezzar, king of Babylon—Nebuzaradan the captain of the bodyguard, who served the king of Babylon, entered Jerusalem. And he burned the house of the LORD, and the king’s house and all the houses of Jerusalem; every great house he burned down. (Jer 52:12–13 ESV)

The intimate attention to detail in its dismantling can leave no doubt about the centrality of the Temple and the impact which accompanied its destruction. The painstaking deconstructive detail provided in verses 17-23 offers a rhetorical inversion of the narrative of Exodus, replete with constructive detail and this narrative is completed with an account of the execution of the leaders of Israel and the Temple personnel (Jer 52:24-27) and the enslavement of the people of Israel (Jer 52:28–30). The reader is left with a spotlight on a lonely king Jehoiachim, exiled and allowed to dine at the king’s table, like a favourite pet.

Given the painful and complete fall that Jeremiah narrates for the Temple and its builder one might expect for the Temple to gradually disappear from the memory of Israel and some 20th century biblical scholarship tends to affirm such an expectation with its dismissal of later Temple themes. But, as a growing group of scholars—including Margaret Barker, Crispin Fletcher-Louis, Greg Beale, and Nick Perrin—have begun to observe over the past several decades, the Temple actually gains strength over the remaining course of the canonical text of the bible as a metaphor for the restoration of the people of God. Here one finds that the relation of work and worship is preserved and even intensified in some cases. With this transformation in mind, in the material which follows, I will attempt to examine the significance of eschatology for the theology of work. My research turns now to the continued, if complex, persistence of the Temple in the moral life of Israel as type and metaphor. In the next chapter, I will proceed to examine the way in which biblical texts continue to narrate a moral relation between worship and work using a metaphorical understanding of the Temple which provides a new context in which to narrate the paradigms which I have elucidated above.
Chapter 3
The Temple Not Made With Hands: Reconceptualising the Temple

“For David said, ‘The Lord, the God of Israel, has given rest to his people; and he resides in Jerusalem forever. And so the Levites no longer need to carry the Tabernacle or any of the things for its service.’” (1 Chr 23:25–26)

In this chapter, I approach several texts in Christian Scripture where temple construction is narrated in a substantially different way, as the construction of the temple forms the basis for a metaphor with distinctly eschatological clothing. As I shall suggest, for all of these texts, the Tabernacle narrative in Exodus serves as the point of reference and thus our study of these later temple texts in Isa 60, Zech 14, 1 Chr 22, and 2 Chr 1-9 provide further opportunity—particularly in light of the counter-narrative found in 1 Kings and Jeremiah—to develop and texture the account of good work which I have proposed above. As the title for this chapter (drawn from Mark 14:58) suggests, this study also serves as a preparation for my concluding chapter in Part 1 which traces all these themes into the NT. The gospels are not the first time that the reader of Christian Scripture encounters a radical revision of the temple, and it is helpful to explore the eschatological usage of temple construction in the Hebrew Scriptures in order to underline the conceptual points of continuity with the NT. Before I proceed to exegesis of these Hebrew texts, however, some comments are in order regarding the use of eschatology in reflection on the theology of work. As with the wisdom of Solomon, a number of scholars have recently and somewhat eclectically made generic use of eschatological theology for reflection in the theology of work, and this will serve to explain the differences between those and my more textually and thematically focused inquiry here.
1. Is Eschatology the appropriate site for a theology of work?

Several contemporary accounts in the theology of work focus foremost around eschatological themes.¹ Most significant among these is one of Moltmann’s students, Miroslav Volf, whose monograph, Work in the Spirit, attempts to offer a “comprehensive” theology of work.² Volf addresses the interconnections between eschatology (of the transformatio mundi variety) and work, and by implication pneumatology, drawing especially (though briefly) on Paul’s theology of charisms as a useful resource for reflection on work. Aside from this synthetic dimension, Volf also suggests that a theology of charisms is less “open to ideological misuse” as the charismatic relation to work is not merely evaluative, but transformative as it will be subject to God’s judgement.³ It is here that we arrive at the specifics of his deployment of an eschatological payload for the theology of work. He argues, we must “pattern our work according to the values of the new creation, so we also have to criticize it in the light of the eschatological judgment.”⁴ In this way, Volf means to address some of the shortcomings of early twentieth-century co-creation accounts: “Elevating work to cooperation with God in the pneumatological understanding of work implies an obligation to overcome alienation because the individual gifts of the person need to be taken seriously. The point is not simply to interpret work religiously as cooperation with God and thereby glorify it ideologically, but to transform work into a charismatic cooperation with God on the ‘project’ of the new creation.” In A Theology of Work: Work and the New Creation Darrell Cosden offers an account of work which he suggests is “quite similar” to Volf’s which he uses as “both an orientation point and a point of departure.”⁵ His account is noteworthy in

² This work seeks to counteract theological Reformation models of work as “vocation” which Volf describes as a “dead hand.” Volf, Work in the Spirit: Toward a Theology of Work, 103-10, vii.

³ Ibid., 116.

⁴ Ibid., 120.

⁵ Ibid., 116. He elaborates later: “Revelation of the future glory in the realm of grace is the measure by which events in the realm of nature must be judged. To the extent that non-Christians are open to the prompting of the Spirit, their work, too, is the cooperation with God in anticipation of the eschatological transformation of the world, even though they may not be aware of it.” Ibid., 119.

that his focus on eschatology as the conceptual site for the theology of work is even more straight-forward and prominent. Following Moltmann’s emphasis on Gestalt,\textsuperscript{7} Cosden suggests:

we as persons will be saved in eternal life, but that so too will eternal life (in some way) be extended to the things that we love, the objects of our concern, including our projects. This must be the case for if it were not, we as persons would be so abstracted out of our life’s contexts and thus so divorced from our Gestalts that in our disorientation and dislocation our very identities (stemming from our concerns our loves and interests) would be lost even as were supposedly being saved.\textsuperscript{8}

Common to these works is a two-fold emphasis on (1) an attempt to benefit from the twentieth-century rehabilitation of eschatology, paradigmatically expressed in Moltmann’s theology of hope and (2) the need to augment this use of eschatology with other dogmatic themes. For Volf this augmentation is pneumatic and for Cosden somewhat more eclectic. Particularly in Cosden’s account, one finds a striking subordination of broader theological reflection to the author’s attempt to provide a theology of work and the kind of therapeutic emphasis I have noted above in my introduction. The eschaton, in Cosden’s way of thinking, simply must include our work because we cannot imagine it to be otherwise. To leave the matter ambiguous, or worse still, partially discontinuous, would risk jeopardising an attempt to provide a therapeutic account of work for alienated workers. The hope of heaven is mobilised here in order to soothe the worker anomie. Such a therapeutic interest surely has its place, but when mobilised so comprehensively, it blunts the precision of the moral account which follows. Further, this intense focus on a realisable final state represents a significantly circumscribed eschatology and all these authors fail (perhaps as a consequence of their recourse to free-standing dogmatic themes) to note any specific contour in canonical Christian Scripture in which this restoration of hope is located. As Oliver O’Donovan observes, regardless of whether we want it to be the case, Christian moral epistemology cannot rely so closely on knowledge of the end of history. In fact an ethic which arises from the Christologically conditioned understanding of resurrection prevents such an approach:

What then, must such knowledge of created order be, if it is really to be

\textsuperscript{8} Ibid., 152.
available to us? It must be an apprehensive knowledge of the whole of things, yet which does not pretend to a transcendence over the whole universe, but reaches out to understand the whole from a central point within it. It must be a human knowledge that is coordinated with the true performance of the human task in worship of God and obedience to the moral law. It must be a knowledge that is vindicated by God’s revelatory work that the created good and man’s knowledge of it is not to be overthrown in history. Such knowledge, according to the Christian gospel, is given to us as we participate in the life of Jesus Christ.⁹

I will follow O’Donovan’s cues here in seeking to anchor my reflection on the moral impact of eschatological accounts of Temple construction for the theology of work not with an unsustainable fascination with the final state, but rather on our present life in Christ with an ecclesial foundation. I consider the extrication of the theology of work from its miring in final-state obsessed eschatological speculation to be a crucial task, particularly if it is to avoid being beholden to modern narratives of hope in progress. A more carefully situated approach to these eschatological texts may illuminate our understanding of the ethics of work and free up the theology of work to serve its prophetic task as well in addition to a therapeutic one. As Moltmann himself argues, our task must not be primarily therapy, but discernment which is nourished by hope. Moltmann defends such an approach in his most recent book, The Ethics of Hope. According to Moltmann, an Ethics of Hope is one which remains open to change, particularly away from destructive patterns which may seem to possess an unstoppable cultural inertia:

We become active in so far as we hope. We hope in so far as we can see into the sphere of future possibilities. We undertake what we think is possible. If, for example, we hope that the world will continue to be as it is now, we shall keep things as they are. If we hope for an alternative future, we shall already change things now as far as possible in accord with that. If the future is closed, then nothing more is possible; we cannot do anything more.¹⁰

Moltmann also proposes here a balanced appropriation of hope: “if our actions were directed only to the future, we should fall victim to utopias; if they were related only to the present, we should miss our chances.”¹¹ In this way of thinking hope is construed as something which replaces fear. A coherent moral vision is not one which flees disaster, but one which can be drawn towards a positive portrayal of the

---

¹¹ Ibid., 3.
good:

The endtime is simultaneously the new-time. In the perils of time it lives from hope for the coming of God. It mobilized energies out of surmounted fears. It holds instructions for resistance against the old world in anticipation of the new one. It presupposes a transformative eschatology and, correspondingly, is itself transforming action.  

Keeping this chastened and realistic pursuit of hope in mind, I proceed with my analysis towards eschatologically inflected accounts of Temple construction where we find further texturing of the model which I have sketched out above.

2. New Temple Construction in Isaiah 60

A study of Isa 60 offers a useful point of entry into the eschatological use of Temple imagery in the Hebrew Scriptures, as the author of Isaiah picks up on several images which are present in the narrative of 1 Kings which are in re-deployed in later eschatological visions. In seeking to elaborate the relationship between the construction imagery in 1 Kings and Isaiah, I will begin by examining three inter-related images which arise in 1 Kings and are re-cast in an eschatological context in Isaiah. These are the ships of Tarshish, the “wealth of nations”, and the foreign kings who march in after their offering.

The first of these three—the ships of Tarshish—is used in significant and complex reference in both 1 Kings and Isaiah. In 1 Kgs 10:22, we read that “the king had a Tarshish fleet on the sea, along with Hiram’s fleet. Once every three years, the Tarshish fleet came in, bearing gold and silver, ivory, apes, and peacocks” (1 Kgs 10:22 JPS). Commentators suggest that this particular text is meant to draw attention to the vast scale and economic prowess of Solomon’s kingdom as he was able to draw exotic and extravagant imports. The greatness of a King is represented by power and wealth, but also in their ability to attract trans-national merchants who

12 Ibid., 5.

13 I am grateful for Richard J. Mouw’s study When the Kings Come Marching In which first drew my attention to this text and several of the images which I am examining here.

14 אֲנָיָה תָרְשִׁישׁ, referenced in 1 Kgs 10:22 and Isa 60:9. Though it will fall outside the scope of this study to examine the phrase exhaustively, references to the ships also appear in 1 Kgs 22:49; Isa 2:16; 23:1, 14; and Ezek 27:25.

15 יהלificador, mentioned in Isa 60:5, 11 and 61:6

16 אֵרֶם, referenced in Isa 60:11.
connect the kingdom to other cultures, bringing sophistication and slaves. As the directly following text in 1 Kings summarises: “Thus King Solomon excelled all the kings of the earth in riches and in wisdom” (1 Kgs 10:23 ESV). This is the final affirmation of Solomon in the text before we read of his great fall which is narrated in chapter 11. It is perhaps also a final dark commentary on Solomon’s status when this later metaphorical use of the ships of Tarshish includes no direct reference to Solomon, the ships become a free-standing metaphor. Later kings unsuccessfully attempt to preserve the trading fleet, as with Jehoshaphat who conspired with Ahaziah (1 Kgs 22:41–50, 2 Chr 20:31–21:1), but their destruction (described in 1 Kgs 22:48 and 2 Chr 20:36–37) is immediate and this destructive end is affirmed as God’s good judgement of an unrighteous monarchy in Ps 48:8[7]a, Isa 23 (vv. 1, 14), Ezek 27:25–27, and possibly also Rev 18:11-17. The other two images also occur as a composite in 1 Kings, though somewhat more indirectly. 1 Kgs 10:1-15 provides an obvious paradigm which is distilled later in Isaiah as the wealth of nations coming from a procession of kings. We read of the extravagant offering by the Queen of Sheba of “camels bearing spices, a great quantity of gold, and precious stones” (1 Kgs 10:2, JPS; cf. 10:10) King Hiram, who brings “gold from Ophir… a huge quantity of almug wood and precious stones” (10:11) and others who brought tribute or taxes such that “All the world came to pay homage to Solomon and to listen to the wisdom with which God had endowed him; and each one would bring his tribute — silver and gold objects, robes, weapons and spices, horses and mules — in the amount due each year” (1 Kgs 10:24–25 JPS).

In Isa 60 these three images combine to convey an image of the eschatological new Jerusalem that is a true fulfilment of the Mosaic promise proclaimed in Exod 19: “you shall be My treasured possession among all the peoples. Indeed, all the earth is Mine, but you shall be to Me a kingdom of priests and a holy nation” (Exod 19:5–6 JPS). The writer of Isaiah includes the ships of Tarshish in his eschatological vision of the new kingdom: “Behold, the coastlands await me, With ships of Tarshish in the lead, To bring your sons from afar, And their silver and gold as well — For the name of the LORD your God, For the Holy One of Israel, who has glorified you” (Isa 60:9 JPS). One might initially think that these later references shine positively, free of any divine judgement of an unrighteous

---

17 On all these, see Ezek 27-28.

18 Here and were relevant below, I will provide verse numbering as per the MT, enclosing alternate numbering in brackets when appropriate.
monarchy. However, Isaiah has already narrated the destruction of the contemporary ships in Isa 23:1-14, and the human cargo of these new merchants, rather than slaves are the sons of Israel, “brought… from afar.” In spite of the seemingly straightforward status of Israel’s trading efforts in eschatological reference there remains a memory of the unrighteous conduct of Israel’s kings. The rendering of the “wealth of nations” here is with respect to the radiance of the new Jerusalem. Consequently, Isa 60:5 relates: “your heart shall thrill and exult, because the abundance of the sea shall be turned to you, the wealth of the nations shall come to you” (ESV). In this way, the approach of foreign kings marks an eschatological ascendance of Israel of which Solomon’s wise rule represents a failed prototype. This theme is repeated across much of the Prophetic literature.19

It is likely not an accident that Adam Smith chose to use this potent eschatological image for the title of his now famous work on political and economic theory.20 However, what Smith’s appropriation, and subsequent uses of this text seem to miss, is the way in which this eschatological image is mediated in the context of the wider canonical text of Scripture. It is noteworthy that this image of the “wealth of nations” in Isaiah—which functions as a metaphor for the task of sourcing materials for work—is not exclusively eschatological, but it is also doxological. In the subsequent chapter we read that “While you shall be called ‘Priests of the LORD,’ And termed ‘Servants of our God.’ You shall enjoy the wealth of nations And revel in their riches” (Isa 61:6 JPS). Further, as Muilenburg has observed, the frequent reference to glory in the text if Isa 60 (there are 2 uses of תַּבָּא in Isa 60:1 and another in 60:13) marks this text as a theophany.21 This explicitly economic activity is to be entertained not by more generic economic agents, or even a new King, but specifically the personnel of worship which I have examined above. This image is inherently social, or to be more theologically specific: ecclesial. Without the theological particular social context in which worship is offered, our present context and the New Jerusalem as imagined by Isaiah lose their authentic point of reference.

A second new emphasis in the eschatologised construction narrative in Exod 60 is on the aesthetic dimension of work. While the beauty of Tabernacle and Temple

---

19 In addition to my discussion of Isaiah 60 here, see also also Isa 2:2-4, 49:22-23; Mic 4:1-4, 7:17; Hag 2:6-8 and Zech 14 (discussed further below).

20 It is unclear as to whether Smith was aware of the direct source of his allusion. “Wealth of nations” is the literal rendering in the KJV, so such an expectation is not anachronistic, but a search of Smith’s text and a survey of secondary literature on Smith contain no references to Isaiah whatsoever.

are certainly implicit in the narratives which I have discussed above—with the
description of material excellence, particularly fine timber and precious metals—
compared to the description of the temple in Isa 60 these previous instances are quite
muted. The text of Isa 60 (and indeed the broader text of Isaiah) is replete with visual
aesthetic vocabulary. In particular, the writer of Isa 60 maintains a strong rhetorical
recourse to the language of bestowed divine beauty using רַוֶּחַ [p’r]. This link may
be lost on contemporary readers with the frequent rendering of רַוֶּחַ using the English
“glory” as the Hebrew term carries an inherent aesthetic connotation which has faded
in English usage. In contrast, Exodus has only three instances of רַוֶּחַ (both in
nominal form) which refer exclusively to the priestly garments in Exod 28:2, 40;
39:28 and the term is not used in 1 Kings at all. In fact the sole aesthetic use of the
language of beauty refers to Abishag who is יִפְה [yph =“fair” or “beautiful’] in 1 Kgs
1:3.

It is important to note that beauty is granted to the newly constituted temple
in Isaiah by divine bestowal. This aspect is set early in the text where in Isa 4:2, the
text suggests, “In that day, The radiance of the LORD Will lend beauty and glory,
And the splendor of the land [Will give] dignity and majesty, To the survivors of
Israel.” In a similar way, the opening of Isa 60 establishes the aesthetic dimension of
the new Jerusalem: “Arise, shine, for your light has dawned; The Presence of the
LORD has shone upon you!” (Isa 60:1 JPS). This city presents not only a glorious
beauty, but one which is illuminative - leading to the frequent visual imagery of
brightness, shining, and light which is a result of the beauty of this new installation:
“And nations shall walk by your light, Kings, by your shining radiance.” (Isa 60:3
JPS).21 Yet, this vocabulary is not deployed with regards to the work of the people,
but rather the divine work, i.e., the people themselves. In this way, in contrast to the
emphasis in 1 Kings on the designs of Solomon (“משהים” cf. 1 Kgs 7:8, 17, 19, 22,
26, 28–29, 31, 33; and Jeroboam in 16:7) this text speaks of divine “handiwork
in which I glory” (Isa 60:21 JPS) which is God’s people. This theme is inverted in
Jeremiah’s satirical poem about a goldsmith in Jer 10 (repeated briefly in 51:17). As
Jeremiah reminds his readers, juxtaposing the wise and the “good” work they
purchase made by הַרְשׁ [hrš =“ engravers”] and צִירְרִים [wrp =“goldsmiths’] with that of

22 As Oswalt observes, “The root of beautify, p’r, is frequent in the book, occurring a total of 31
times, 9 times in verbal forms and 22 times in noun forms. Fourteen of these occurrences are grouped
in chs. 60-64, where God declares the fulfilment of the promises of 4:2 and 28:5.” Ibid., 542.

21 Cf. Verse 1 “Arise, shine, for your light has dawned; The Presence of the LORD has shone
upon you!” (Isaiah 60:1 JPS). This light is derivative of the divine light, as verse 19 reminds the
reader.
the maker who creates and bestows wisdom: “among all the wise of the nations and among all their royalty there is none like You. But they are both dull and foolish” (Jer 10:7–8 JPS). In Isa 60, one finds the same theme repeated in a positive frame. Righteous people are even described as the result of (albeit painful and redemptively destructive) smith-work echoing with the metalwork examined in previous chapters: “It is I who created the smith to fan the charcoal fire and produce the tools for his work; So it is I who create The instruments of havoc” (Isa 54:16 JPS). Also relevant is the perhaps more gentle occurrence later of the metaphor of the potter working clay: “But now, O LORD, You are our Father; We are the clay, and You are the Potter, We are all the work of Your hands” (Isa 64:7 JPS) In this way, the beauty of the temple serves to emphasise the point I have made above that because the artisan of this new Temple is God, the result of this craftsmanship is not merely a physical installation for the site of worship, but it includes the making of the people which constitute it. This is craftsmanship on a cosmological scale.

Yet in noting the emphasis given to divine agency in the bestowal of beauty in Isaiah it is important to observe how divine possession of beauty is also magnanimous. This bestowal is not exclusive, but rather as the language of illumination emphasises, this bestowal overflows from YHWH to his creatures. Affirming this suggestion, in verse five, Isaiah suggests, "ותראה והראת " [tr y wnhṛ t =“you shall see and be radiant”]. Most importantly, however, Isaiah conveys a relationship between shining radiant beauty and holy righteousness. Verse 21 suggests, “Your people shall all be righteous… the work of my hands, that I might be glorified” (Isa 60:21 ESV). As above, “glorified” in verse 21 is an English rendering of the Hebrew verb פרא [p’r] in the hitpael, which has a reflexive meaning. In this way, the possibility of beauty in God’s work is not set in opposition to the possible beauty of the good work done by righteous humans, because this beauty inheres in the new “built” Temple and radiates outward. If this light, bestowed by the Creator were not possessed in some sense as their own, how could these people be described as “your people, all of them righteous” (Isa 60:21 JPS)? Though Isa 60 does portray the activity of building with a limited cast, namely with just one divine builder, ascription of this sort to the divine Creator is substantially different from focused ascription to Solomon. One is exclusive and the other is naturally inclusive, indeed as the pattern of the text is to provide a model of the moral importance of beauty not

---

24 This theme is inverted in the satirical poem about the goldsmith in Jeremiah 10, repeated briefly in 51:17.
just for the exiled people of Israel but also foreign kings and their culture. This beautifying procession provides a paradigm which is presented in several later more compressed eschatological accounts, including Hag 2:6–9 and Rev 21:23-35.

3. Beauty and work

A crucial point to be drawn from this exegesis of Isaiah is that beauty is not merely a functional (or “ornamental”) aspect of work. Instead, the ability to apprehend and produce beauty is an intrinsic feature of good human work, which is executed in conformity with the pattern offered by the divine Creator God. Beauty has its own place as an aspect of good work. This suggestion stands in contrast to a good deal of contemporary design theory with its strong emphasis on functionalism typified in Louis Sullivan’s adage that “form ever follows function.” A small but growing group of modern designers and design theorists argue that beauty ought not be given a subordinate role in making. Along these lines, David Pye argues conversely for a relativisation of “function” which he suggests is a fantasy: “most of the nonsense probably starts at the point where people begin talking about function as though it were something objective: something of which it could be said that it belonged to a thing.”25 He prefers to define function as “what someone has provisionally decided that a device may reasonably be expected to do at present.”26 His point is that workers often discover function along the way as they make things and that the process of work cannot be slavishly devoted to utility. Consequently function ought not be afforded teleological primacy in work: “any concept such as ‘function’ which includes the idea of purpose is bound to be an unsafe foundation; for purpose leaves commonplace factual affairs like results far behind.”27 In purposeful repudiation of Engels’ utilitarianism, Pye goes on to argue for a model of design and workmanship which he calls “useless work.”28 Moral work which ought to result in beauty involves much “useless” activity: exploration, play, and experimentation, and this commitment to the beautiful, as Isaiah construes it, is a recapitulation of divine Creative activity.

Rowan Williams provides a theological account of beauty which presents a

26 Ibid., 14.

27 Ibid., 16.

28 Ibid., 77-80.
similar argument against idealistic conceptions of beauty which subordinate aesthetics to intellectual comprehension. Drawing on Maritain’s suggestion (which in turn is drawn from Aquinas) that art is a “value of the practical intellect,” he suggests: “Beauty is not, therefore, a single transcendent object or source of radiance. It is a kind of good, but not a kind of truth—that is, it provides satisfaction, joy, for the human subject, but does not in itself tell you anything.… Beauty, we might paraphrase, is a relation between work and observer in which the observer’s will as well as intellect is engaged, a relation in which what is present to the mind is sensed as desirable, as a source of pleasure.”

In this conception, the aspect of beauty in work cannot be reduced to a property that is intellectually apprehensible or which can be subsumed within a generic moral scheme. Instead, this is a more focused consideration of the moral aspect of work. As Williams argues, “art is not about the will… nor does it aim to produce good dispositions of the will. It does not aim at delight or the desire of the good. It seeks the good of this bit of work. And the artist as artist is not called on to love God or the world or humanity, but to love what he or she is doing.”

Robustly moral work which seeks to produce beauty ought to be intensely focused on excellence in the peculiar work itself, yet beauty is not apprehended prior to the act of work. In this conception, work defies the requirements of utility. As Pye suggests, if one does not pursue the beauty-less “workmanship of certainty” one must pursue a “workmanship of risk.”

The worker seeking beauty must open themselves to contingency, and as I have argued above, this contingency exists on a social axis with other workers and with non-human creatures. This kind of riskiness through accepting contingency stands in stark contrast to the modern obsession with psychological “risk” and “flexible capitalism” in business which Richard Sennett argues are an internalisation of postmodern narrative. As workers pursue “short-term work experience, flexible institutions, and constant risk-taking” they embody the conviction that “history is just an assemblage of fragments.”

In contrast, as Williams goes on to suggest, the pursuit of beauty in work does not entail the solipsistic retreat of a fragmented ego. Instead, Aquinas’

---

30 Ibid., 15.

account of *splendor formae* involves an “‘overflow’ of presence…. This object is there *for me*, for my delight; but it is so because it is not there *solely* for me.” In a sense, beauty is communally and experientially substantiated. It we accept this conclusion, then the mass-produced work which is designed in abstraction and then mass-produced “without hands” may be simply incapable of expressing the same kind of beauty because it lacks the requisite intimate human somatic involvement.

Yet, intimate human contact may not be enough to sustain forms of work which may produce beautiful things. Bernard Leach offers a similar critique to the one Williams draws from Maritain, yet he nuances this with further attention to the sociality of beautiful work. He suggests in a similar way that the production of beauty is closely tied to the humanity of craft work:

> The art of the craftsman… is intuitive and humanistic (one hand one brain); that of the designer for reduplication, rational, abstract and tectonic, the work of the engineer or constructor rather than that of the ‘artist’. Each method has its own aesthetic significance. Examples of both can be good or bad. The distinction between them lies in the relegation of the actual making not merely to other hands than those of the designer but to power driven machines. The products of the latter can never possess the same intimate qualities as the former, but to deny them the possibility of excellence of design in terms of what mechanical reproduction can do is both blind and obstinate. A motor car such as a Rolls Royce Phantom achieves a kind of perfection although its appeal is mainly intellectual and material. There I think we come to the crux of the matter: good hand craftsmanship is directly subject to the prime source of human activity, whereas machine crafts, even at their best, are activated at one remove—by the intellect.  

The concern for Leach is a more complex one than simplistic machine-critique. In his conception, the problem is not simply that machine-made work may replace hand-made products and that they may thus replace beauty in human material experience with serviceability (as his allowance for machine-made excellence attests), but that hand-work at its best is an embodied engagement *and* a communal enterprise which is sustained by a living tradition. If hand-work becomes an exclusive and lonely outpost of “artists” this tradition which takes centuries to develop is at risk of being lost. To this end, he suggests:

> The necessity for a psychological and aesthetic common foundation in any workshop group of craftsmen cannot be exaggerated, if the resulting crafts are to have any vitality. That vitality is the expression of the spirit and culture

---

of the workers. In factories the principle objectives are bound to be sales and dividends and aesthetic considerations must remain secondary. The class of goods may be high, and the management considerate and even humanitarian, but neither the creative side of the lives of the workers nor the character of their products as human expression so perfection can be given the same degree of freedom which we rightly expect in hand work. The essential activity in a factory is the mass-production of the sheer necessities of life and the function of the hand worker on the other hand is more generally human.  

In this account, the sociality of work and the production of beauty are inextricably intertwined and both of these constitute truly human work. A properly human account of work, as Leach argues, is one which may sustain and be shaped in turn by a living tradition.

Leach’s account of “human work” is deeply resonant with the theological account of work I have developed here and I would go on to suggest that preserving craft traditions may be considered a form of faithfulness to the fifth commandment, “Honor your father and your mother, that your days may be long in the land which the LORD your God gives you.” I draw this reading of the commandment from Oliver O’Donovan who argues that it is “the paradigm command of tradition.” While we may think that this commandment is “concerned with the duties of children” its domain is much broader as O’Donovan suggests:

This is a command addressed to adults, whose existence in the world is not self-posited but the fruit of an act of cultural transmission, which they have a duty to sustain. The act of transmission puts us all in the place of receiver and communicator at once. The household is envisaged as the primary unit of cultural transmission, the “father and the mother” as representing every existing social practice which it is important to carry on. Only so can community sustain itself within its environment, “the land which the LORD your God gives you.” No social survival in any land can be imagined without a stable cultural environment across generations. By tradition society identifies itself from one historical moment to the next, and so continues to act as itself.

O’Donovan goes on in his essay to identify two “transcendental representations” which include the “narration of history” and “art.” It is important to note—with the reference to “art” in both O’Donovan and Williams—that there are problems with

---

35 Ibid., 11.

36 Exod 20:12.

this category in the contemporary context as it is often understood as standing apart from or in opposition to “craft.” In contemporary English usage, appropriation of the term “art” and “artist” may too easily collude with a Romantic construct where art is construed in contrast to quotidian work and this in turn undermines the social forms of work which I am arguing for here.38

In seeking a rehabilitation of the concept of work for the modern context, a thicker craft-account is crucial. As I have already noted above, machine-work with its natural instrumentality can encourage a reductive account of work. Work may be reduced to a series of repeatable actions without any necessary recourse to human knowledge as it is accreted in tradition.39 This thicker account of beautiful work is particularly important in the modern work context as the rhetoric of beauty has recently become quite popular in selling mass-produced consumer goods. As Wallace and Press observe, “beauty is the new black.”40 One finds frequent recourse to the rhetoric of “beauty” in Apple marketing of iPhones and other consumer devices. Yet this is a thin instrumentalised account of beauty which is subordinated to utility. While agreeing that “Beauty… plays a vital role in humanising technology and ensuring its cultural relevance” Wallace and Press contest, “the idea that we can ‘design beauty in’ to those technologies and their associated gadgets. Industrial design can employ the illusion of beauty to temper the beast of technology by providing a veneer of desire, seduction and usability.”41 This deceptive “beautifying” is a problem not only for the consumer, but also for the worker, as suggested by the outbreak of suicides at the Foxconn manufacturing facility in China (Apple’s primary outsourcer). These thin accounts of beauty do not draw upon those robust forms of work which can in turn sustain and develop work-traditions in human communities.42 Rather, they may actually accelerate their dissolution. In this way, beauty is an inherent part of a biblical account of moral work. The eschatological deployment of these construction narratives in particular betrays a remembrance of moral forms of

39 We find an example of this relegation of work to a subordinate political status in Hannah Arendt’s otherwise tremendously insightful account, The Human Condition.
41 Ibid., 43.
work which are morally embedded and narratively sustained.

4. **Work materials in Isaiah 60**

Returning to Isa 60, it is important to note a second point upon which Isaiah might be mistakenly seen to be resonant with the Solomonic account. In this case, the trouble is with materials, more specifically, with regards to the timber on display, which Solomon harvested with such conspicuous extravagance for the Temple. On display here are still the timbers of Lebanon in addition to the cypress (ברוש), pine or elm (תאשור) and boxtree (תדרון) which the foreign kings bring (“The majesty of Lebanon shall come to you…. To adorn the site of My Sanctuary, To glorify the place where My feet rest” (Isa 60:13 JPS). Yet this display is not one of conspicuous extravagance, but rather of a properly proportional beauty. In making this point, it is crucial to note an exceptional text earlier in Isaiah’s vision where he speaks of the restoration of Israel as consisting in the planting of trees:

The poor and the needy Seek water, and there is none; Their tongue is parched with thirst. I the LORD will respond to them. I, the God of Israel, will not forsake them. I will open up streams on the bare hills And fountains amid the valleys; I will turn the desert into ponds, The arid land into springs of water. *I will plant cedars in the wilderness, Acacias and myrtles and oleasters; I will set cypresses in the desert, Box trees and elms as well — That men may see and know, Consider and comprehend That the LORD’s hand has done this, That the Holy One of Israel has wrought it. (Isa 41:17–20 JPS)

Isaiah 41 presents a startling and straight-forward account of reforestation and ecological restoration as part of the Isaianic vision of restoration. The planting of trees is an extension of God’s re-bestowal of beauty to the land, as the text from Isa 4:2, noted above, suggests. The verse: בִּיְמֵי הָאוֹרָה יִהְיֶה צְמָת וְהוֹי לְעַל בָּלָדָה וּפְרֵי הָאֲרוֹן לָעוֹלָם לְצִבְיָהוּ צְמָת may be rendered literally as “in that day, the vegetation (צומת) of the Lord shall become beauty and glory and the fruit of the land majesty and beauty to the remnant of Israel.” In this light we may read the presence of trees and exuberant appreciation of timber as standing in contrast to Solomon’s approach to raw materials and the beauty of the Temple. Precious timber in this eschatological sense is portrayed not as a resource to be expropriated, but as a plant to be tended and renewed.

As this explication of materials and kingly processions in Isa 60 makes clear, the content of these construction narratives has been eschatologically redeployed

---

43 Along these lines, see also Northcott, *Moral Climate: The Ethics of Global Warming.*
such that the construction of the temple experiences a transition in meaning for the moral topology of Israel. Many images from 1 Kings reappear, but their appropriation makes clear that the new Kingdom is not a mere recapitulation of the events of 1 Kings in a new age. Rather, this transformation is far more significant, granting a new conception of kingship and a recomposition of construction of the place of worship. We find a similar, though more conspicuously eschatological, re-weaving of the moral fabric in which the places and products of worship and work are so intimately related with a study of the rehabilitation of holiness in the domestic context as narrated in Zechariah to which I now turn.

5. New Temple Construction in Zechariah 14

In seeking to flesh out my appreciation of Temple theology in the later Hebrew Scriptures, I turn next to Zechariah as a complementary example. Before I proceed to close analysis of the closing verses of this book, it may be helpful to set the narrative context in which this eschatological vision appears. After a brief and violent description of the tribulation which the people of Israel will endure in 14:1-4, the writer notes, “Then the LORD my God will come, and all the holy ones with him” (Zech 14:5 ESV). From 14:6 onwards, we find what is by some descriptions an “apocalyptic” description of the eschaton. In some contrast to the peaceful kingdom shown in Isaiah, Zechariah’s new kingdom occurs as a sort of impenetrable bulwark in the midst of violent conflict and collapsing political order.44

As we approach Zech 14:20, several resonances with regard to the themes treated above in Isaiah appear along the way. First, materials are gathered from the nations in this description as well, though not explicitly by sea: “And the wealth of all the surrounding nations shall be collected, gold, silver, and garments in great abundance” (14:14 ESV). Second, it is clear that this text offers another eschatological procession for the purposes of worship. At verse 16, a stillness settles over the scene and “everyone who survives of all the nations that have come against Jerusalem shall go up year after year to worship the King, the LORD of hosts, and to keep the Feast of Booths.” (14:16 ESV). Noteworthy is the fact that Zechariah continues the transformation of monarchy into a divine office which we have noted above in Isaiah. Also relevant is the mention of a “Feast of Booths” in 14:16. Though I will turn my analysis in later chapters to more specific analysis of the moral

44 In spite of this difference, the imagery of Zech 14 is nonetheless deeply resonant with Isaiah. Along these lines, see Elizabeth Rice Achtemeier, Nahum–Malachi (Atlanta: John Knox Press, 1986), 166.
significance of the Jewish feasts which punctuated the worship of Israel, for our purposes here, it will suffice to note that this text describes the final annual feast which was liturgically associated with harvest (also described as the “feast of ingathering” or “feast of Tabernacles”). This is a liturgical situation in which the notion of deliverance is brought into theological relation with the agricultural harvest. This establishes a clear liturgical setting for the procession described in chapter 14 and one which, even in the eschatological domain, draws in the ordinary work of the people. In resonance with Isaiah, it is clear that this wealth is being brought for the purpose of worship, but as Smith notes, explicit Temple language has almost completed receded into the background in Zechariah.45 As I have already suggested, this need not necessarily be seen as a counter-Temple ideology in competition with other prophetic writers but rather as a different level of appropriation of the complex theological abstraction of the garden-Temple-city metaphor complex.46

Having picked up resonances along the way, Zechariah builds to a crescendo in 14:20-21 and here the writer further develops the vision presented in Isaiah. Verse 20 offers the strongest association of work and worship in the eschatological context yet presented:

And on that day there shall be inscribed on the bells of the horses, “Holy to the LORD.” And the pots in the house of the LORD shall be as the bowls before the altar.” (ESV)

The vision narrated in this text is that of an all-pervasive holiness. Two images which occur in Exodus and echo across the Hebrew Scriptures—horses’ bells and pots—are related here to metaphorically rich counterparts. This is not a random selection, as Meyers notes, “These two objects have symbolic value relating to warfare and subsistence, the two major themes of this chapter.”47 Regarding the metaphorical association of these two images, for the horse’s bells, the inscription “Holy to the Lord” invokes the garments of the Aaronic high priest and sole entrant into the holy of holies in the Tabernacle liturgy (cf. Ex 28:36; 39:30). While formerly the priest plays a representative role, bearing this inscription in affirmation of their holiness, now even those domestic animals, horses, which had formerly functioned as Ancient

---

46 Zech 6:12-14 also more explicitly presents the suggestion that the task being pursued is, in some form, the rebuilding of the temple which is described in concrete but eschatological language.

Near-Eastern war machines (cf. Isa 2:7, Deut 17:16, Ezek 38:4) can bear the same insignia. As J.M. Smith suggests, “The horse is holy because he brings, not a warrior, to kill and waste, but a pilgrim to worship at the Temple of Yahweh.”⁴⁸ Along similar lines, Carol Meyers notes, “The horse, the symbol for political power and military might, and of all that interferes with the peace and harmony that are to prevail in the eschatological age, will bear a holy insignia.”⁴⁹ In the second instance, the association is more obvious, even given the somewhat opaque reference in 14:20b to מזרקים לפני המזבח [mzrqym lpyn hmzḥm = “the basin before the altar”] which has been variously translated.⁵⁰ It is clear that this reference is meant to describe a consecrated vessel involved in Israel’s worship, though it may not be obvious which vessel is implied. The crucial point is that this vessel is described in the first half of verse 21 as equivalent to “every metal pot in Jerusalem and in Judah” (JPS). Again, the more domestic implement is declared “holy to the LORD of Hosts.” As they make pilgrimage for the festival which draws in the work of agriculture, so too worship here will draw in and consecrate one of the most basic domestic implements: the cooking bowls. Carol Meyers explicates the significance of this consecratory inclusion and her commentary bears repeating at length:

As cooking vessels, they touch the lives of all; food prepared in them is consumed by people throughout the land. Thus by their very ordinariness they bespeak inclusivity. The language used for food preparation—“sacrifice” and “cook”—merges the processes involved in preparing sacral and secular repasts. Thus the inclusivity of a mundane vessel becomes combined with a procedure, actually a reversal of a procedure, that implies sanctity for everything prepared in such a vessel. In addition to the fact that the processing of food involves the sanctification of all food, and thus of all who eat, i.e., everyone, the pots themselves signify the irrevocable crossing, and thus the obviating, of traditional boundaries between the sacred and the mundane. For the comparison of cooking pots to altar basins means likening them to vessels that, in the cultic scheme of Israel’s Torah literature, are the only items that can move from an outer realm of Temple sanctity to an inner one. They are unparalleled in their ability to reach a higher degree of sanctity. Thus they signify a pervasive and vast intensification, even within the holy

---

⁵⁰ Possible reference to Exodus might include the pots (mzrqa) at the altar described in Exod 38:3; Num 4:14, or more indirectly to the kneading bowls which Israel was said to bring with them in their flight from Egypt in Exod 12:34. One also finds specific mention of bowls in the temple in Ezek 46:21-24.
Jerusalem Temple, of sanctity.\textsuperscript{51}

This universalisation of holiness is a recurring theme in Zechariah. Achtemeier notes helpfully that Zech 14 "is essentially an explication of 13:9 with its covenant formula"\textsuperscript{52} This text speaks of redemptive transformation as well: "And I will put this third into the fire, and refine them as one refines silver, and test them as gold is tested. They will call upon my name, and I will answer them. I will say, 'They are my people'; and they will say, 'The LORD is my God'" (Zech 13:9 ESV). It is important to note that, even amidst all the language of beauty, the true significance of the eschatological transformation of work in the portrayal of Zechariah is the association of work and holiness. The special status of the products and rituals of worship provide a template for the rehabilitation of quotidian work.

6. Reading the Theology of Work in Zechariah After Social Theory

Given the strong association of work with holiness that I have illuminated in these prophetic texts, some comments are in order so that I may distinguish what I take to be the significance (and nature) of this association from a number of other modern scholars who have made much of the relationship between the quotidian and holy. In particular, it is my contention that twentieth-century social scientific paradigms have obscured modern exegesis of this text, and inhibited its use for moral reflection. One influential example is The Idea of the Holy, written in 1917 by Rudolf Otto.\textsuperscript{53} In his work, Otto meant to distinguish himself from "the tendency of our time towards an extravagant and fantastic 'irrationalism'" and so he sought, like William James, to root the study of religion in a non-rationalistic way in experience.\textsuperscript{54} His study is concerned specifically with the idea of the holy because of its enmeshment with morality, "this 'holy' then represents the gradual shaping and filling in with ethical meaning, or what we shall call the 'schematization', of what was a unique original feeling-response, which can be in itself ethically neutral and

\textsuperscript{51} Ibid., 507.

\textsuperscript{52} Achtemeier, Nahum--Malachi, 165.

claims consideration in its own right.’

This kind of schematisation is precisely the sort of rationalising of religion that Otto wants to resist. In order to advance this agenda, Otto seeks, in typical Enlightenment fashion, to identify that aspect of holiness which takes the believer out of themselves. Tim Gorringe summarises the Enlightenment move in this way, “the root of religion to the ‘numinous’, which broke in on the believer and left her trembling in awe and fear. This experience was marked off as sharply as possible from the everyday.’”

In a similar way to Otto, Mircea Eliade suggests, “man becomes aware of the sacred because it manifests itself, shows itself, as something wholly different from the profane.” In this way, holiness is a property which is wholly extrinsic from objective perceptible reality: “The sacred tree, the sacred stone are not adored as stone or tree; they are worshipped precisely because they are hierophanies, because they show something that is no longer stone or tree but the sacred, the ganz andere.” As I shall go on to suggest, this estrangement of materiality from holiness, ironically inhibits a moral deployment of these categories into our quotidian contexts. Following Otto and Eliade, Carol Meyers demonstrates the persistence of this paradigm in her introductory comments to the text in Zech 14 about what is “Holy to Yahweh.” She suggests: “The distinction between that which is holy, i.e., that which is associated with the realm of the divine, and that which is mundane or profane, part of everyday life, is fundamental to ancient Israelite thought as to many other religious systems (see Eliade 1961).” But the trouble with these dichotomies is the thickness of the curtain that separates holy and profane. As I have already noted above, “holy” exists in one sphere of life, while the “profane” exists in another. But as I have been demonstrating with my reading of these texts, one cannot help but notice the points of theological continuity between the apocalyptic vision on display in Zechariah, and what I have argued is a morally normative vision deployed through the worship of Israel as elucidated in Exodus and reaffirmed in subsequent construction narratives.

Another brief example serves to demonstrate the persistence of this

55 Ibid., 6.

56 Gorringe, A Theology of the Built Environment: Justice, Empowerment, Redemption, 11n36.

57 It is important to note that Otto’s original German term heilig has been translated “holy” in English, but it could just as easily have been rendered “sacred.”

‘replacement’ model whereby interpreters assume that what we find in the canonical narrative is the construction of a temporary *liturgical* vision which exists to be “cast off” in favour of a more dynamic model which suits the apocalyptic vision. Troeltschian prejudice is on display in significant ways as Ralph L. Smith suggests, with regards to the holiness of horse’s bells and pots in Zech 14, “There could not be more shocking words for an OT priest than those in vv 19–20”*. But, as I have been arguing here, such a priest who held to a permanent sacred/profane distinction would be a forgetful priest indeed. After all, several features of the apocalyptic on display here, most notably the egalitarian aspect (“apocalyptic eschatology “without stricture or qualification,” according to Hanson, 293) stand in strong continuity with the normative (and post-lapsarian) vision proposed in Exodus. Zechariah here is not proposing a novel order, but rather envisioning the realisation of that which the canonical text of the Hebrew Scriptures has been building explicitly towards from the beginning. The first half of this pericope, 14:16-19 offers an apocalyptic account of the feast of Tabernacles, again demonstrating that this is not a novel order on display here, but that which has been thirsted after by the people, and narrated in their liturgies from the very beginning.

In seeking to recover from the Enlightenment prejudices of these social scientific models, I would argue that the moral vision on display in Zechariah actually affirms and elaborates on the materially-embedded moral vision found in Exodus. I will mark out these themes briefly here in order to recall their resonance with Zechariah’s theological vision. First, this is a vision of work which displaces Israelite war and monarchy. Human work thrives in an egalitarian system where the volition of workers is free and this aspect is crucial to the construction of the place of worship. Unhindered by monarchial subversion, the labour of Israel on their place of worship is also free to have a particular social aspect. In this way, we should expect those who labour together to cultivate a polity in which they can work together and best express the holiness to which they are jointly called. Second, even in this new eschatological vision not all things are holy, for if this were the case, the category would no longer be useful in description. In the eschatological transformation of Israel, the category of holiness is not abolished, instead it ripples outwards to draw in more and more domestic activities and tools. Leading up to this text we find that it is actually in the abolition of unholy things that all things may be properly consecrated. Thirdly, the eschatological vision portrayed in the two texts I have analysed here

---

60 Smith, *Micah-Malachi*, 293.
expresses an ethics which can be realistically shaped by the eschatological vision.
One cannot read the intertextual resonances between Zechariah and earlier texts and maintain a strong discontinuity between these two visions. In this way, eschatological text impinges on present practice. Similarly, this is not an anti-realistic vision, but rather one which is properly realistic in the Augustinian sense, combatting Niebuhrian pessimism and hopelessness which is cloaked in the guise of supposed Christian realism.

There are a number of other Temple texts which affirm this vision of work. In the rebuilding narratives in Haggai 1-2 and Ezra 3-6 one finds a renewed emphasis, harkening back to the Tabernacle, on the free and willing participation of all Israel. Along with these texts we find similar, if terse treatment in Ezekiel and in the NT, in Revelation of the building of a Temple which is “not built with hands” yet which still speaks to the intended moral unity for the people of Israel in their worship. In concluding this study of the Hebrew Scriptures, I turn from these apocalyptic visions to a yet different sort of refashioning of Temple construction which is found in Chronicles. This text offers us the longest sustained re-narration of Temple construction “with human hands” in the Hebrew Scriptures aside from Exodus and 1 Kings. Also significant for my argument here, it provides a subtle but significant re-casting of the terms of holy work, redeploping themes which are notably taken up by NT writers. It is here that we find the final exhortation towards the recovery of moral order in the rehabilitation of worship.

7. The Reconceptualised Temple in Chronicles

In the traditional arrangement of the Hebrew Scriptures, Chronicles stands as the final text. Given this terminal placement, it is particularly significant that Chronicles carries a strong literary and typological relationship back to the Tabernacle construction narrative in Exodus. There is good reason to think that the Chronicler offers a recapitulation (or in several cases, re-deployment) of the work themes which I have drawn from Exodus and traced across other Temple construction narratives in the Hebrew Scriptures. Affirming how the Chronicler consolidates this moral account of work also grants additional weight to the ethic which I have outlined thus far. However, substantiating this claim requires careful reading of Temple construction texts in Chronicles as a number of the details of the work which I have highlighted as problematic in the Solomonic narrative in 1 Kings are also preserved in the text of Chronicles, albeit with modifications. I will argue in this section that the moral account of building conveyed by the Chronicler resonates
with the account of valorous work in Exodus, in part because the Chronicler has deliberately revalorised Solomon and his work. But, there is an additional nuance to this resonance between Exodus and Chronicles, and appreciating this may best be facilitated with an appreciation of the eschatological aspect of Chronicles.

In a recent dissertation, Steven James Schweitzer has argued—convincingly, I think—that it might be helpful to read Chronicles through the lens of contemporary Utopian theory. In outlining his approach, Schweitzer suggests:

The importance of social critique in utopian literature is emphasized in recent critical theory as a means of reading such works not as blueprints for ideal societies, but rather as revolutionary texts designed to challenge the status quo and question the way things presently are being done. Thus, utopias depict the world “as it should be” not “why it is the way it is.” In other words, utopias are not works of legitimation (providing a grounding for the present reality), but works of innovation (suggesting a reality that could be, if its parameters were accepted).61

This approach to “innovation” in Chronicles also provides a helpful frame for an ethical reading of Chronicles. I will read the points of contrast in the text of Chronicles not with suspicion of a historicist agenda, but attentively, looking for tension with the present. As Schweitzer suggests, tensions between Chronicles and Kings need not be read merely as “projections of Second Temple practice back into the pre-exilic period for the sake of legitimation” rather, one may find that through a utopian reading these tensions offer a purposeful depiction of society which “is in tension with historical reality.”62 In this way, the Chronicler’s re-appropriation of Israel’s history offers a two-fold prophetic witness: “Chronicles is, on the one hand, an interpretation of ancient prophecy and, on the other hand, a reflection of post-exilic prophecy itself.”63 Turning to the Chronicler’s account of David and Solomon, recourse to a “utopian genre” may also promote a more nuanced reading. One can view the Chronicler’s account of David as a “utopian view of this monarch—a better alternative picture without being perfect.”64 As Schweitzer observes, “Chronicles does not remove all of David’s flaws (1 Chr 13:7-13; 15:11-15; 22:8; 28:3), nor is he sinless (1 Chr 21:1-22:1), nor does he rule “all Israel” without elements of internal

61 Steven James Schweitzer, “Reading Utopia in Chronicles” (PhD Diss., University of Notre Dame, 2005), 39.
62 Ibid., 61.
64 Schweitzer, “Reading Utopia in Chronicles,” 190.
dissent (1 Chr 12:30 [v. 29 Eng.]; 15:29).”\(^65\) Instead, such a reading of Chronicles raises the possibility that the purpose in Chronicles is not to launch a full defence of the Davidic monarchy, but rather to re-cast David and Solomon’s work as a rehabilitation of Israel’s worship, including the Temple. In this section, I will consider the ways in which such reframing functions in 1 Chr 22, 28, and 2 Chr 2 in order to assess how these texts might serve to consolidate the account which I have developed above of egalitarian worker agency and working wisdom. Before proceeding to the text, however, it may be helpful to note how this textual strategy and my reading of Chronicles also implicates ethical considerations of intergenerational agency and responsibility.

7.1. The Sociality of Work and Intergenerational Ethics

One specific feature of my account of the ethics of work here has been an affirmation that a moral account of work sustains a dialectic between the agency of individual and collective workers. A further aspect to this dialectic is the affirmation that truly moral work takes into account not only the status of other living workers, but also carries an intergenerational concern: how might good or evil acts persist or dissipate across generations. I have argued positively above that this sort of concern requires attending to the tradition in which craft knowledge is developed and sustained.\(^66\) Conversely, neglect of the intergenerational implications of bad work is a very live concern given how the products of modern work and the consequences of their manufacture often span multiple generations. Particularly in ecological ethics, scholars have recently brought forth a sustained attempt to counteract the atomised account of moral agency latent in modern utilitarian moral philosophy and instead to take intergenerational responsibility seriously given the penchant by modern people to discount the consequences and effects of bad work leaving future generations to suffer the consequences of accumulated carbon, pollution, and waste generated by our economic activity.\(^67\)

The theological perspective offered by the Chronicler offers a challenge to mono-generational ethics using what has been described by a number of scholars as a “theology of immediate retribution.”\(^68\) Japhet summarises this theological programme

---

\(^65\) Ibid., 190.

\(^66\) See page 98 above.

\(^68\) Raymond B. Dillard, 2 Chronicles, WBC (Waco, Tex.: Word Books, 1987), 76.
as follows:

Reward is mandatory, immediate and individual. Every generation is requited for its own deeds, both good and evil, with no postponement of recompense; there is no accumulated sin and no accumulated merit. The ‘ultimate cause’ of man’s fortune lies in man’s free choice: God reacts to his behaviour, granting him what he deserves. Attending this free choice are two major factors: warning and repentance. Warning before punishment is regarded in Chronicles no merely as an option, but as a mandatory element in the judicial procedure. Man is always offered a chance to repent, and God does not fail to react to repentance; the gate remains open for man to return. The status of man as the master of his fate may lead to a certain limitation of God’s free and sovereign acting; the Chronicler guards these essential divine attributes through the concepts of ‘trial’ and compassion applied to the human—divine relationship. 69

Dillard highlights the rhetorical immediacy of this theological programme, which is notably presented in many of the passages apparently unique to the Chronicler including 2 Chr 7:14, 12:5, 15:2 and 20:20. 70 Inasmuch as it presents a more individually conceived moral engagement with God, immediate retribution may seem to present something of a challenge to an intergenerational ethic. Yet, upon closer inspection, this theological notion of “immediate retribution” actually offers a helpful corrective to simplistic radical agendas where political change is conceived of as sudden and effective. Just as one can ignore the intergenerational impact of immoral acts, one can also over-construe the determination of moral or immoral action by previous generations. In some sense, the Chronicler addresses the present generation with a challenge: the sins of previous generations—whether in the reckless extraction and consumption of fossil-fuels, the generation of unnecessary waste and pollution, or simply in squandering the opportunity to make things which are beautiful and promote the flourishing of all God’s creation—need not prevent contemporary workers from the pursuit of well-measured moral work. With this understanding of the moral role of immediate retribution in mind, I turn now to the account of Temple construction in Chronicles to see how a reading of this account may add further nuance to this account of good work.

7.2. Reframing Abundance and Inclusiveness in 1-2 Chronicles

I begin with 1 Chr 22, where David provides an extended speech to his son

70 Dillard, 2 Chronicles, 77.
Solomon and provides a number of important details regarding his expectations for Temple construction. Here amidst David’s speech one finds that the significance of materials used in the temple have been reframed. In particular, “abundance” has taken on a new intensity. In spite of the appropriation of narrative material from 1 Kings, it is important to note that there are also substantial parallels that have been drawn in here with the Tabernacle construction account in Exodus. Much like Moses’ speech in Exod 25, the speech by David in 1 Chr 22 serves to provide a theological frame for the Temple construction account that is to follow and this provides an appropriate place to begin this assessment of the construction narrative in Chronicles. Before giving the pithy instruction to Solomon: כְּהֶם יִשָּׁרֵעָה [qwm wʾšh =“arise and work!”] in this unique non-synoptic portion of 1 Chr 22, David delivers a speech to Solomon which describes the provision of materials for the Temple:

David gave orders to assemble the aliens living in the land of Israel, and assigned them to be hewers, to quarry and dress stones for building the House of God. Much iron for nails for the doors of the gates and for clasps did David lay aside, and so much copper it could not be weighed, and cedar logs without number — for the Sidonians and the Tyrians brought many cedar logs to David…. See, by denying myself, I have laid aside for the House of the LORD one hundred thousand talents of gold and one million talents of silver, and so much copper and iron it cannot be weighed; I have also laid aside wood and stone, and you shall add to them. An abundance of workmen is at your disposal — hewers, workers in stone and wood, and every kind of craftsman in every kind of material — gold, silver, copper, and iron without limit. Go and do it, and may the LORD be with you. (1 Chr 22:2–4, 22:14–16 JPS)

This provision by David of materials for the Temple underlines the Chronicler’s suggestion regarding the unity of their two monarchies. Particularly, the note at the end of verse 14, וְעַלְיָם יְוסִיף [‘lyhm ḫwsYP =“and upon these you will add’] connects this list with Solomon’s efforts that the Chronicler revisits in 2 Chr 1. A further aspect of David’s description that sets this account in some contrast to 1 Kings is the hyperbole in his speech.\textsuperscript{71} Literary reference to abundant materials is found in Exod 25 and 35-36 and 1 Kgs 6. Yet it is important to note that the rhetoric of abundance performs a different function in each instance. The account of materials here is different enough from the previous two for me to suggest a third theological framing for material abundance. In Exodus, the participation of the people is highlighted,

\textsuperscript{71} Allen “calls these figures ‘rhetorical mathematics,’ and compares them to common expressions like ‘thanks a million’ or ‘a thousand pardons.’ Cited in Ralph W Klein, 1 Chronicles: A Commentary, ed. Thomas Krüger, Hermeneia (Minneapolis: Fortress Press, 2006), 440.
whereas in 1 Kings, Solomon is given prominence in what I have negatively described as a solipsistic narrative where the abundance of material serves to highlight the danger hanging over Solomon’s monarchy. Arriving at 1 Chronicles we find that the author has taken the trajectory set by 1 Kings to a new extreme. Abundance has been relocated into a new theological context. In 1 Kings, as I have noted, the account of the gold provision may be considered believable as an outcome of military conquest and taxation. In contrast, as Klein observes, in Chronicles “the amount of gold is enormous and unrealistic: roughly 6,730,000 pounds or 3,365 tons. At four hundred dollars an ounce, that much gold today would amount to more than forty-three billion dollars.”

Similarly, the extravagant import cedar is now the only timber specifically mentioned in David’s list of provision (accounting for the use of the more generic חן [sym = “timber”] in 22:14). It is also worth noting that the ascription we find in 1 Kings, בֵּית יֵר הַלָּבוֹת ([ḥyt y’r ḥlbwtn = “Lebanon Forest House”]) is omitted from 1 Chr 22 and instead appears later in 2 Chr 9:16, 20 further distancing this account from the parallel in 1 Kgs 10:17, 21. While the presence of hyperbole make it clear that Chronicles is not a strictly “realistic” narrative, precisely how we might locate the author’s construal of the relationship between the text and political-economic reality is a more complicated affair and one that ought not be neglected as this construal is a crucial preparation for the use of this text in moral reflection. As I have suggested at the outset, Schweitzer’s use of utopian criticism may be helpful here, as one may read the dissonance generated by the hyperbole I have noted in 1 Chr 22 as a utopian feature. Here the author narrates an alternative world which can challenge the current one, both with respect to the “current” world of the author, and the present-day which bears uncomfortable similarities. Analysis of David’s account of materials provides a basis upon which to assess the moral force of Chronicles with regards to craft.

First, in spite of the obvious connotation that cedar would have been an imported timber and gold would have been gathered from conquest, David’s wording in the speech presents an account of materials which have been conserved. On the face of things, this seems ironic, yet 1 Chr 22:5 provides a theological interpretation of David’s stockpiling of materials: “My son Solomon is an untried youth, and the House to be built for the LORD is to be made exceedingly great to win fame and glory throughout all the lands; let me then lay aside material for him” (JPS). In this way, the “conservative” nature of this stockpiling is underlined by David as his

---

72 Ibid., 440.
speech to Solomon continues with the statement in v. 14: “יהוה בעניי ותרומתי לבת “[whnh b ’nyv ḥqwmwty lhbt-yhwḥ].” Though David’s halting of the Temple building project has been at the Lord’s command (vv. 8-9) it has still been an affliction that he has taken on in submission to the divine plan under which this project was reserved for the “איש מנוהה” (“man of rest”) under whose reign the Lord shall confer peace and quiet, or שקט שלום (v. 9). The Chronicler has attenuated (though not completely eliminated, as I have noted above) the negative aspects of David’s reign, and this enables a more roundly positive portrayal of Solomon, his son, as a prince of peace. In addition, the Chronicler has used this new account of David’s passing of materials on to Solomon to replace the account in 1 Kings of the Queen of Sheba’s contribution to the Temple materials which arrive from “outside” Israel. With this in mind, one may read this account of materials in the way that I have read Isa 60 in the commentary above where the emphasis is not on the status conferred on the materials by their giver, but on the status provided by the recipient, namely Solomon. Strangely, as it might seem amidst this account of material extravagance, there is a resonance here with the wilderness austerity of Israel which prepared them for the building of the Tabernacle. Just as the Tabernacle was built with gold drawn from the “stripping of the Egyptians” (cf. Exod 3:22; 11:2; 12:35) the previous mention of gold in Chronicles is 1 Chr 18, particularly “the other silver and gold that he had taken from all the nations: from Edom, Moab, and Ammon; from the Philistines and the Amalekites” (1 Chr 18:11 JPS). Even though the status of the gold may be tainted by association with David’s war campaigns (cf. the remark by David in 1 Chr 28:3), the Chronicler suggests to their readers that this status is not persistent. Consequently, these statements by David provide a different framing to the materiality of the Temple and the pedigree of its construction. Temple construction is no longer problematised, but is instead offered as a sign of hope. 1-2 Chronicles presents the act of Temple construction as the realisation of a promise of peace and rest for the people of Israel while also re-affirming a “conservative” account of work materiality.

The Chronicler takes up the question of “why costly cedars, luxurious materials and grandeur?” later in 2 Chr 2:4-6 as well.” Here Solomon’s boast that “The House that I intend to build will be great” may seem to re-visit the narcissistic

53 Trans.: “Look, by denying myself (LXX and Vulg = “in my poverty”), I have prepared for the house of the Lord.”

King portrayed in 1 Kings. Yet in 2 Chr 2:4[5], the purpose behind this greatness is explicitly evangelical: הַדוֹל אֱלֹהִים מַלֶּל אֲלָלְיָהוּ [gdwl ḥhynw mkl-h ḥhym = “our God is greater than all gods”]. This evangelistic justification, given in the context of Solomon’s actual building process, resonates with David’s justification in chapter 22. In this way, the Temple fulfils a doxological purpose, such that the material beauty and abundance in construction that the text later narrates is meant to sustain sensually-rich worship. To draw this narrative to a more explicit point, one might say that the Chronicler argues that if the work of construction is to properly express the doxological element and glorify God, then excellence and beauty in craft are an intrinsic requirement. God provides material abundance and humans recapitulate this in worship by recourse to beauty and lavishness.

There are also parallels in David’s speech with the use of “design” language I highlighted in Exodus. As was the case with Moses in Exod 25, Solomon is given an extensively narrated המניה [ṭbnyt] for the Temple and its functioning. Though this plan is proxied by David (28:11-18) the narrative concludes with an emphasis on the divine provenance of this plan. Just as David notes in verse 5 that the selection of Solomon is divinely mandated, in verse 19 the plan he outlines briefly in chapter 28 for Temple construction is also ascribed directly to a divine hand: “All this that the LORD made me understand by His hand on me, I give you in writing — the plan of all the works” (JPS). Just as fidelity was a central theme in Tabernacle construction, as noted above (particularly with regard to Exod 25:9), in 1 Chr 28 we find affirmation that Temple construction is performed with fidelity to the Mosaic pattern (cf. also 1 Chr 15:15). This affirms the centrality of the Exodus account of Tabernacle work and the link which I have argued for above between the building of worship space in Exodus and Chronicles. Along these lines, Selman affirms: “The Davidic monarchy continues the work that God began under Moses, and is required to maintain the same standards. The message seems to be that if Israel seeks hope for the future, it must continue in the same tradition.”75 This pattern is taken up visually over the course of 1 Chr 13-16 as the ark makes a gradual journey into the heart of the Temple. The remnant of Tabernacle worship noted in Exodus provides the kernel of the Temple as construction ensues.

More specifically, and also in parallel with Exodus, this account of pattern and design is rooted in theologically construed conformity. The emphasis that David

places on the importance of fidelity to the law (28:3-4) as a precondition for the proper and holistic function of Israel’s worship serves to affirm a link between Temple design and the moral architecture of Israel. Consequently, David’s invocation in chapter 22: קָהַ֙צ וְעָשֶׂ֔ה [qwm w’sh =“arise and work”] becomes an exhortation: חָזַ֝q וְעָשֶׂה [hzq w’sh “be strong and work”] in 28:10 which is then intensified in 28:20 with the addition of מְשׁ [msh =“be strong and courageous and work”]. Just as was the case in Exodus this Temple building is also to be constructed by following a plan which carries specifications which are not technically exhaustive, but morally delimited. The way in which Hebrew accounts of design infer conformity is underlined by the use of another Hebrew design word יָשָׂר [ysh] in 1 Chr 28:9. In underlining his exhortation to Solomon, David suggests that “the LORD searches all minds and discerns the design (wiązan) of every thought” (JPS). Here we find resonance with a host of fidelity and infidelity texts which juxtapose evil human designs which are conceived in a free-standing way without recourse to YHWH64 with those designs which are conceived in conformity to the divine design.77 Isaiah explicates this rhetorical and conceptual connection between human design in Isa 29:16: “How perversion of you! Should the potter (突) be accounted as the clay? Should what is made (ȥר) say of its Maker, “He did not make me,” And what is formed say of Him who formed it, “He did not understand?” Similarly, the Psalmist notes “He knows how we are formed (ץרא)” (Ps 103:14 JPS). Just as in Exodus, the very fact that a plan for the Temple can exist is contingent upon an affirmation that all creation is formed according to a divine plan. In the same way that successful musical harmony requires a natural agreement of vibrations; the calibration of rationality, beauty, and wisdom in design rely upon harmony with the basic pattern of work which has been modelled by YHWH.

The account of Temple work in Chronicles is also notably more social than in 1 Kings, drawing further resonance with the Exodus account. David’s speech in 1 Chr 28 is enclosed by a broadening of address. The text begins by addressing a wider audience, namely the host of Israelite officials listed in verse 1, and in the final verse (21) David draws Solomon’s attention to invite what Braun describes as “the active

64 The classic example begins the Noah narrative: “The LORD saw how great was man’s wickedness on earth, and how every plan (ץרא) devised by his mind was nothing but evil all the time.” (Gen 6:5 JPS). See also Gen 8:21; Deut 31:21.

77 “The confident mind (ץרא) You guard in safety, In safety because it trusts in You.” Isa 26:3 JPS.

78 This reading is further affirmed by the inversion of Isaiah’s statement in Hab 2:18.
involvement of the people in the work with Solomon.”

This includes “priests and Levites for all kinds of service of the House of God, and with you in all the work are willing men, skilled in all sorts of tasks; also the officers and all the people are at your command.” (1 Chr 28:21 JPS).

This is emphasised with the more oblique, but nonetheless positive reference to workers in 1 Chr 22:15 with David’s bestowal of every artisan [מל המ] and all materials [מל מלאך] and 1 Chr 28 and this rhetorically signals the encompassing nature of the work to be undertaken: 28:1 is a long sequence of nouns in construct form, begun with כל שר [kl-sry ysr’l = “all the officers of Israel”] which goes on to include the whole political and economic strength of Israel: “tribal officers, the divisional officers who served the king, the captains of thousands and the captains of hundreds, and the stewards of all the property and cattle of the king and his sons, with the eunuchs and the warriors” (JPS). All the של (princes or leaders) of Israel who were summoned in 1 Chr 22:17 are again addressed in 1 Chr 28:1. Without denying the legitimacy of monarchy, there is an egalitarian aspect to the language of David’s speech, as Selman argues: “David’s unequal form of address, my brothers and my people (v. 2), identifies the king with his people, with the king like everyone else under divine orders (cf. vv. 7–10; Deut. 17:18–20).” Though the liturgical personnel are not mentioned explicitly here, the come up later in the chapter, and as Japhet suggests, “the absence of special reference to the priests and Levites is only apparent. The particular point of view of this pericope makes such a reference unnecessary: the priests and Levites, like everyone else, are represented by their ‘tribal leader’, by any ‘officers’ appointed from their number, and by their ‘men of substance’. ”

Echoing verse 12, verse 21 closes this discourse on a note of even further expansiveness with David’s presentation to Solomon: “Here are the divisions of the priests and the

---

79 Roddy L. Braun, _1 Chronicles_, WBC (Waco, Tex.: Word Books, 1982), 268.

80 “מל החם של [lit. “all the wise in all work”].

81 Japhet suggests “The verse describes in great detail David’s assembling of the people at Jerusalem. This detail is the literary expression of the comprehensive nature of the occasion also indicated by the explicit ‘all’, and the actual contents of the verse. The nine elements mentioned constitute the most detailed description of the people of Israel in Chronicles.” Japhet, _I & II Chronicles: A Commentary_, 485.

82 Selman, _1 Chronicles: An Introduction and Commentary_, 260. This is emphasised, as Japhet observes, by the four-fold repetition of the fact of Solomon’s divine election in 1 Chron 28:5, 6, 10, and 29:1; see Japhet, _I & II Chronicles: A Commentary_, 488.

83 Ibid., 486.
Levites for all the service of the house of God; and with you in all the work will be every volunteer who has skill for any kind of service; also the officers and all the people will be wholly at your command.” (NRSV). The force of this speech affirms in a strong rhetorical way the inclusiveness of the work-project which is to follow.

Finally, in addition to this inclusive vision of Temple construction work, we find a re-affirmation of the spirit-filled wisdom involved in the work to come. The Chronicler’s conception of the building process is portrayed in continuity with the Tabernacle account and in direct contrast to the building account in Kings. While, as I have noted above, the construction account in Kings ascribes wisdom only to Solomon, here we find the reappearance of חכם [hkm] to describe skilled work using the exact same Hebrew phrase as was used in Exod 28:3, 31:6, 35:10, and 36. The ascription of wisdom here in the final verse of chapter 28 is brief, but we find further occurrences of “working wisdom” with the introduction of Huram of Tyre in 2 Chr 2. The literary position of this introduction emphasises parallels between the two. While in Kings, Solomon calls upon Huram late in the description, here he is introduced early in chapter 2. Just as in Exodus, “preparation of the necessary materials (35:4-29) is immediately followed by the introduction of artisans (35:30-36:1).”84 One also finds in 2 Chronicles an account of the widely distributed bestowal of wisdom for work. This is the case with the description of Bezalel’s parallel Huram-ab in 2 Chr 2:

Now I have sent a skilled man (איש חכם), who has understanding…. He is trained to work in gold, silver, bronze, iron, stone, and wood, and in purple, blue, and crimson fabrics and fine linen, and to do all sorts of engraving and execute any design that may be assigned him, with your craftsmen (חכמי), the craftsmen of my lord, David your father. (2 Chr 2:13–14 ESV)

It is interesting to note that while one finds use of “wisdom” language in association with mechanical skill in 1-2 Chronicles (cf. 1 Chr 22:15, 2 Chr 2:6, 11–13), there is not a similar use of spirit-filling to accompany the empowerment of workers. In fact, the first mention of רוח [rwh = “spirit”] does not come until 2 Chr 15 with the mention of Azariah the son of Oded. There are later mentions of the spirit in 2 Chronicles, but the function of the spirit is quite different here, being an agent of judgement (2 Chr 18:18–25) and inspiring prophetic speech (2 Chr 20:14; 24:20)

---

84 Ibid., 541.
even in the mouth of foreign kings (2 Chr 36:22). One can account for this difference, not by theological intent, but lexical distance. Chronicles is composed using Late-Biblical Hebrew, and there is reason to believe that we find spirit language missing from 2 Chr 2-9, not as a deliberate omission, but rather as a relocation of the spirit within the narrative given a different theological purpose with respect to the spirit and spirit-empowerment.

7.3. Freewill Offerings: Workers and Freedom

In addition to the inclusiveness of the Chronistic narrative and the return of wisdom language to describe those who assist in the work, the aspect of volition is also theologically highlighted in Chronicles. This occurs at a number of junctures, and stands out in sharp relief when viewed against the narrative in Kings. One find this, for example, in the first chapter of 2 Chronicles. As Japhet notes, “the king does not ‘assemble’ the people; rather, he only proposes the idea… the people’s consent and co-operation are expressed in action…. Popular participation in the major innovation in the Chronicler’s view of the event.” This is also the case in 2 Chronicles chapter 2, where we find that the episode with Huram of Tyre has been shortened and reworked. The King only receives brief mention: “And Huram king of Tyre sent messengers to David, and cedar trees, also masons and carpenters to build a house for him. And David knew that the LORD had established him as king over Israel, and that his kingdom was highly exalted for the sake of his people Israel.”

Noteworthy here is the fact that Huram is not summoned by Solomon, but rather he takes the initiative in approaching Solomon. In a sense, here one find here a thorough deployment of the eschatological metaphor noted above in Isa 60 where this king comes “marching in.”

This stands in rather stark contrast to the account of slave labour presented in 2 Chr 2:17-18 and this is perhaps the most crucial text to understand with regards to

85 For a detailed examination of spirit-language and prophetic empowerment in Chronicles, see Schniedewind, The Word of God in Transition, 55ff. Schniedewind argues that the use of spirit-possession and inspiration language in Chronicles “is a development of the type of spirit inspiration in Ezekiel” (72). Also noteworthy is his argument that spirit inspiration in Chronicles contrasts with that of ecstatic possession described outside the Hebrew Scriptures, such that the volition of prophets is not violated.

87 Ibid., 529.

88 1 Chronicles 14:1-2 ESV.

89 Cf. Ibid., 537.
the sort of work on display in temple construction in Chronicles. Again, understanding the purpose of the Chronicler may be assisted by examining the contrast with Kings. As Jarick notes:

The Annalists [author(s) of Chronicles] seem to have no embarrassment in portraying an invidious policy of slave labour under which some of the enslaved are placed in charge of enforcing the enslavement, and they make it explicit in numerical terms that every single one of the non-enfranchised residents of the kingdom are rounded up for the building work… the assertion in the Annals [Chronicles] that the Temple builders are the entire resident alien population of Solomon’s kingdom, and nothing but the resident aliens, is a startling picture.⁹⁰

Jarick ascribes this move to a purposeful inversion of the Exodus and notes that the whole Temple project seems to be based on the expropriation of resources and labour leading to a happy outcome “in the Annalist’s story-world…. Solomon’s marshalling of an alien army of slaves led to the erection of a grand edifice that required no drop of Israelite sweat or blood in its construction.”⁹¹ One way to read this contrast, as Jarick argues, is to note the disinvolve of Israel in the labour of the building process: this is a Temple built without Israelite hands. Yet there may also be a positive theological intention on behalf of the Chronicler here as my allusion in the title of this chapter to Mark 14:58 where Jesus makes reference to a re-built Temple that is “not made with hands” suggests. I have already noted how the narrative style in Chronicles stands in some significant contrast to those earlier building accounts which carry more a more varied cast of characters with more literal reference to their work. Might one read here a recalibration of building back towards the protological building account in Genesis where the divine person acts exclusively upon inert matter and brings things into being? The Chronicler’s account of slave labour sits uneasily within the middle of Christian scripture, and the dissonance created by the writer’s apparently casual attitude towards it cannot, I think, be fully resolved or easily dismissed. For my purposes here, it may be even more important to note that this construction account by the Chronicler participates in a broader transition towards an eschatological re-formulation of construction narratives which is more explicitly exhibited in the apocalyptic texts in the Hebrew Scriptures and NT. This reading is vindicated, I think, when one turns to look for similar themes of worker

---

⁹¹ Ibid., 379.
agency in the related text in Ezra. The account of worker agency is more straightforward in Ezra, and this affirms the way in which the blending of genres by the Chronicler may initially impair our notice of the resonance between the account of work agency in Chronicles and Exodus. I turn now to a brief examination of this parallel text in Ezra before turning to the Chronicler’s typological description of Solomon which is picked up in the NT.

Inclusiveness of Israel is also strongly emphasised in Ezra by the use of an Exodus typology. This is emphasised from the start of the text: Cyrus himself is said to initiate a gathering of materials much like the stripping of the Egyptians in Ezra 1:4: “And let each survivor, in whatever place he sojourns, be assisted by the men of his place with silver and gold, with goods and with beasts, besides freewill offerings for the house of God that is in Jerusalem” (Ezra 1:4 ESV). As one might expect of a נדבה [ndbh “free will offering”] these materials are said to be נדב [hndbh = same root in a verbal form, thus: “freely offered”]. As Williamson notes, the intended similarity with Exodus in the offering of materials is underlined by the specific reference toكل [kly = “vessels of silver and gold”]. This resonance is unique among the various Exodus typologies. I have also noted above resonances between Exodus and Ezra 7. The second point of emphasis regarding the personnel of work described in Ezra is embedded in the structural choice to precede the Temple construction narrative by an extended account of the return of exiled Israelites in chapter two. This too makes typological reference to Exodus, in that the author stresses how “those returning were representative of Israel in its full extent.” Even the king returns the Temple vessels which have been so contentious harbour amongst idols in Nebuchadnezzar’s Temple (cf. 1:7) in a reference back to the tools narrated in Exodus. In the midst of this narrative of gathering, we find that along with these materials, personnel are recruited by the motion of the spirit of God, “Then rose up the heads of the fathers’ houses of Judah and Benjamin, and the priests and the Levites, everyone whose spirit had stirred to go up to rebuild the house of the LORD that is in Jerusalem” (Ezra

93 “That he did so is confirmed by another slight change between the wording of the decree and its fulfilment, namely the addition of the word נדבה [ndbh “vessels.” “Vessels of silver and vessels of gold” are referred to specifically in each of the three Exodus passages listed above.” H G M Williamson, Ezra-Nehemiah, WBC (Waco, Tex.: Word Books, 1985), 16.

94 Ibid., 16.

95 See page 75.

96 Ibid., 32.
1:5 ESV). Here, as in Exodus, is a clear account of free and abundant participation in the project of reconstruction which may be seen to complement the more complex rendering of the same themes which I have been examining here in Chronicles.

7.4. Temple Construction and The New King

I suggested at the outset of this section my conviction that the Chronicler may be trying to re-cast David and particularly Solomon as the agents for God’s work in rehabilitating the worship of Israel. In seeking to demonstrate that there is a more thorough eschatological aspect in Chronicles than simply the resonances with Isaiah I have observed above, it is important to note the strong emphasis in Chronicles on the beginning of a project of peace. One finds this in reading David’s speech in 1 Chr 28 commissioning the building of the Temple with his exhortation to the people to observe YHWH’s law so that they might receive of the promise of "[’rg twbh =“good land”] in verse 8. This reference draws in a Deuteronomic theme, which is the only occurrence of this phrase outside the Deuteronomic texts. 

Chronicles departs from Deuteronomy though, offering a “major shift in context”:

In Deuteronomy these formulas are all relevant to the context of the conquest, which was to follow the unsettled period of wandering in the wilderness. Here, by contrast, at the end of David’s reign and on the threshold of Solomon’s, war is a thing of the past. At this point, the idea of ‘possession’ and ‘inheritance’, as the ultimate aim and hope for the people, is seen as a permanent task confronting each generation.

This emphasis on peaceable inhabitation of good land is augmented with a related emphasis on “rest.” As Kreitzer observes, a substantial and telling innovation by the Chronicler is: “To [drop] both references to God’s ‘rest’ in his parallels to the passages in 2 Sam. 7.1, 11, both of which speak of Yahweh giving David rest from his enemies. Yet David’s rest is only the beginning, as in David’s speech to Solomon, there is a rhetorical word-play in the Hebrew text which affirms the transition underway with the accession of Solomon by connecting Solomon [ישראל] with Sabbath [שליות] 22:6-16, “a man of peace/rest.” The uniqueness of this phrase should be noted,

as Kreitzer observes, this is the only occurrence of the phrase in the MT.\textsuperscript{100} This modification fits within a broader canonical transition, as Gerhard Von Rad observes: “the concept of rest heads off in a new direction within the thought of the Chronicler who moves the focus away from God giving ‘rest’ to the people of Israel, to God enjoying rest among the people of Israel as he settles in Jerusalem among them.”\textsuperscript{101} In this way one may read the construction of the Temple in Chronicles as being re-cast by the Chronicler as a work by God through his agent Solomon. This refocusing marks a change in perspective on the same narrative as it has been presented in 1 Kings, from the ground-level human perspective, to a divine one such that the reader of Chronicles is invited to watch Temple construction from this divine perspective. As I have already argued above, this kind of change in perspective need not imply that human agency is displaced. Instead, the focus here is on a thicker and more vivid description of the divine agency to which human work is subordinate and among which (as I have already argued in relation to Exodus) it is given meaning. This account of “perspective” is helpful in providing a basis for understanding the nature of work involved in the eschatological portrayal of Temple construction in Chronicles, but I also think this may provide a basis for understanding a similar re-appropriation of the temple construction work by the messianic man of peace (Jesus) that one finds in the NT.

\section*{8. A Moral Reading of Tabernacle/Temple Construction}

Before I take this study into the NT, let me review this survey of ‘good work’ in Temple construction: I began in chapter 1 by arguing that the guidelines outlined for making the Tabernacle and the ensuing details of its construction (and commentary regarding the builders fidelity to these instructions) provide a number of details regarding the shape of moral work. First, fidelity to the pattern set by divine work is emphasised. As I noted on several occasions in this chapter, one of the best ways of expressing this conformity to the work and pattern set by the divine creator in affirmation of human creaturely contingency is to elaborate an “ecological” account of work. Here, against minimal work accounts driven either by a ‘naturalist’ desire to minimise human engagement with the creation (and thereby lessen negative

\textsuperscript{100} Ibid., 489.

impact) or by an economically construed pursuit of absolute leisure, we may affirm that humans are made for work, at least when executed within the proper boundaries. In placing emphasis on the natural human inclination towards work, I am—following Ellen Davis—seeking to provide an ecological account which might more specifically enable an “agrarian” reading of scripture that can re-value the ecological aspect of manual work. Given these boundaries, it should not be surprising that we find that in spite of this strong account of human technicality, the affirmation of human work in Exodus emphasises the need for morally circumscribed boundaries. No work is value neutral and discernment with regards to the conformity of human work to the work of YHWH is a constant task.

Exodus provides an account of wisdom which arises from work and not merely a work-epistemology which looks over work. This is a pneumatically-conceived affirmation, bringing together ability, intelligence, and knowledge in a unity of wisdom which is an intrinsic aspect of work and arises out of it. It is also important to note, particularly in light of other literature on the theology of work, that in Exodus, this uniquely pneumatic account, though relevant to the ordinary quotidian work of Israel, is mediated through a social context. The account in Exodus also suggests that truly wise work does not find expression in solitude, as with the Romantic hero, but rather it is sustained by a measure of sociality. This in turn, is the basis for a strong account of work which emphasises the preservation of worker agency whilst affirming theologically construed limitations and contingency. In Exodus, Tabernacle construction work is inherently social in that the act of Tabernacle construction is inclusive of all Israel and their participation is meant to be freely given. This freedom is expressed with exuberant giving, yet exuberance is still balanced by an ecological sense of sufficiency. Finally, this coming together of many gifts also provides an opportunity to appreciate a model of work which is alternately dynamic and specialised against those more therapeutic accounts which have sought to re-value specific (or all) occupations, the vision of Exodus draws from rather different wells, affirming the importance of diversity without reifying specific vocations. I have argued that this account of agency might best be described as the maintenance of two dialectics with one concerning the balance of agency among workers, and the second concerning the balance of agency between the worker and their material, or to put it another way, between the worker and the non-human creatures which are implicated in their work.

On the most basic level, this account is meant to substantiate the claim that there exists a relationship between worship and work which is most powerfully
expressed in the Hebrew Scriptures in the account of Tabernacle construction in the latter half of Exodus. Subsequent Temple construction narratives serve to reinforce and in some cases intensify this account. In particular, in Solomon’s Temple construction narrated in 1 Kings, we find an inversion of both the free volition of workers in Exodus and a solipsistic account of the work agency involved. One consequence of this inversion is that the account of building in Exodus, which I have described as ‘ecological’ is inverted into a destructive and self-serving enterprise. Jeremiah provides a resonant critique of the unrighteous home of Jehoiachim. Here too we find an king who engages in immoral work: building a home which is structurally unrighteous. The same recourse to slave labour and material excess provides clear resonances with the account in 1 Kings. The account by Jeremiah narrates a moral relationship between worship and work as the Temple—meant to function as a place where the people of Israel could regularly engage in practices which promoted a moral synthesis of worship and work—is dismantled.

Subsequent Temple treatments are situated in a new eschatological context, and re-appropriate the Temple narratives with various shades of metaphor. Perhaps the most crucial aspect in understanding this re-appropriation is the change in perspective which is at work in the narratives. These are Temples “not made with hands,” at least not in the same literal way that is narrated in Exodus and 1 Kings. I have drawn attention to the ways in which these narratives nonetheless emphasise their continuity with the moral aspects that I presented in the first half of this chapter. Nonetheless, there are also some new features as well, which complement the moral account I am developing here. Particularly, Isaiah 60 engages this discussion of work with a theology of culture, with the description of the “Ships of Tarshish” and the “wealth of the nations.” Here we find that the indictment of monarchy need not serve as an indictment of work which transgresses “national” boundaries and identity. In a similar way, we also find that the ecological indictment of wealth and extravagance which I have observed at length in these construction accounts need not lapse into an anti-aesthetic rule for work. This dialectic, which was present in a more muted sense in Exodus, comes to shine vividly amidst Isaiah’s apocalyptic vision. Zechariah’s apocalyptic vision also forcefully re-deploys a liturgical metaphor from Exodus, namely the suggestion in Exod 19:6 that “you shall be for me a priestly kingdom and a holy nation.” Worship images and concepts are deployed in Zechariah as a metaphorical collage to suggest that the work and domestic life of Israel might be

\(^{102}\text{NRSV.}\)
drawn into an all-pervasive holiness. What we find in this vision of Zechariah is not airtight containers which separate “holy” liturgical work and “profane” domestic work, but instead a porous state where the two exist in a dynamic relationship. These eschatological visions set the terms for those entanglements of worship and work which we find in subsequent texts, particularly Chronicles and in the NT.

The Chronicler provides a consolidation of these work themes and draws them into the orbit of the eschatological vision inaugurated in Isaiah and Zechariah. In particular, here one finds that the material culture of the Temple is highlighted. Material beauty and abundance in Temple construction are re-cast in light of their possible theological purpose which is to sustain a sensually-rich worship. In some sense, this draws the whole people of God—bodies included—into the worship of YHWH. It follows that for work which has a doxological aspect, excellence and beauty in craft are an intrinsic part of the process. In Chronicles, we find a new iteration of this ecological vision: God provides the material abundance and humans respond to this gift in worship by similar recourse to beauty and lavishness. The details of human involvement in the construction are attenuated in Chronicles, but this is not a matter of de-emphasis, but rather a change in perspective. Keeping this all in mind, I turn next to a treatment of Temple building in the NT.
Chapter 4

“I saw no Temple in the city, for its Temple is the Lord God the Almighty and the Lamb…. The nations will walk by its light, and the kings of the earth will bring their glory into it. Its gates will never be shut by day—and there will be no night there. People will bring into it the glory and the honour of the nations.” (Rev 21:22–26)

1. Not Built With Hands?: Mediating the Temple Concept in the Gospels

As I turn my study to NT use of Temple construction metaphors, some preliminary comments are in order regarding the second-Temple Jewish perspectives which form a backdrop to my reading. It is important to begin by affirming that the Temple was a crucial part of first-century Jewish theology. As N. T. Wright suggests “the Temple was the focal point of every aspect of Jewish national life…. Its importance at every level can hardly be overestimated.” Yet, the Temple as it was generated a high level of controversy. It was, as Wright notes, “the focus of many of the controversies which divided Judaism in this period.” The transition I have already observed above from narratives about Temple construction (i.e., Exodus and 1 Kings) to eschatological narratives about Temple re-construction remained unresolved in the first century. And the details proved contentious. After all, this Temple had been build by Herod, whom almost no first-century Jew would claim to

---

2 Ibid., 225.

be the ‘true King’ and the Hasmonean priestly administration which continued under Roman rule was not uncontested.4 What one finds is that feelings towards the Temple are composite: an abstractly conceived Temple remains a vital part of Jewish theology, while the concrete form of the Temple in the first century is the ground for great controversy.

The contested status of the Temple is highlighted in the very brief but provocative allusion by Jesus to Temple construction in Matt 26:61, Mark 14:58, and John 2:19–21.5 In Mark 14:58, set in the trial before the Sanhedrin, Jesus’ accusers relate: “We heard him say, ‘I will destroy this Temple that is made with hands, and in three days I will build another, not made with hands.’” This accusation in Mark combines two motifs of destruction and rebuilding (with implicit reference to the resurrection of Jesus) which are also combined in the similar texts in Matthew and Luke.6 There is disagreement in these three texts in the first motif as to the agent of the Temple’s destruction: one may assume there is an implicit reference to “the Jews” in John 2:18–19, while Jesus is only described as “able” [δύναμαι καταλῦσαι / dynamai katalysai] in Matt 26:61. Mark 14:58 gives us the straight-forward statement, “ἐγὼ καταλῦσω τὸν ναὸν” [egō katalysō ton naon =“I will destroy this Temple…”] though this statement is still ambiguous, as these are, after all, not the words of Jesus, but those of his accusers before the Jewish authorities. The details of the rebuilding in the second motif are similarly opaque in Mark and Matthew, but in contrast to the messianic secrecy of Matthew which culminates in Matt 26, the gospel of John is more straight-forward. Here Jesus is not described as rebuilding “the Temple” in a strictly literal reference, but rather in John 2:19 he suggests “Destroy this Temple, and in three days I will raise it up (ἐγερῶ).” In verse 21 the gospel writer provides even further clarification by way of a gloss, “ἐξείνος δὲ ἠλεγεν περὶ τοῦ ναοῦ τοῦ σώματος αὐτοῦ” [keinos de elegen peri tou naou tou somaatos autou =“he was speaking about the Temple of his body”]. The text from John intensifies a theme that is common to the synoptic gospels, namely that the Temple with all its symbolic and practical significance is replaced by the body of Christ.

There is a range of perspectives on the meaning of Jesus’ action in the Temple. Chris Rowland interprets Jesus’ words at the Temple cleansing as a work of

5 Though Luke does not provide a direct parallel in his narrative, there is an implicit relation between these texts and Jesus’ comment in Luke 21:5-36.

reform and not a programme of replacement. A reformist agenda is not critical for my argument here, however, as even the reference point for a newly rebuilt Temple would have been fidelity to the same original pattern and its paradigms established in the Pentateuch. On the other hand, it would be hard to defend an eschatological vision which is Temple-free. E. P. Sanders makes this point forcefully, suggesting, “On what conceivable grounds could Jesus have undertaken to attack—and symbolize the destruction of—what was ordained by God? The obvious answer is that destruction, in turn, looks towards restoration.” Though he prefers a less literal understanding of the meaning of “rebuilding” for Jesus than Sanders, N. T. Wright also agrees “that Jesus’ action fitted into a programme of eschatological expectation, not reform.” He goes on to suggest, “I also agree, of course, that Jesus, like Jeremiah, regarded the Temple as God-given; there is no question of his suggesting that it should never have been built in the first place, or that worshipping in it was inherently wrong.”

It is also important to assess the usage of ἀχειροποίητος [acheiropoietos = “not made with hands”] to determine what kind of contrast is being drawn with the Temple that is χειροποίητος [cheiropoietos = “made with hands”]. This point is a particularly crucial one in the first century as—with only a few Stoic and Cynic exceptions—the educated classes in Greek and Roman society had a widely held disdain for physically-involving occupations (or “hand-work”). Disdain for non-agricultural work as an “illiberal” or banausic art can be found across non-Christian classical thought. A good example of this attitude can be found in Xenophon’s (ca. 430-354 BCE) reproduction of a dialogue by Socrates:

The illiberal arts, as they are called, are spoken against, and are, naturally enough, held in utter disdain in our states. For they spoil the bodies of the

9 Ibid., 426.

10 Ibid., 426. In a footnote to this statement Wright observes: “Hence, the early Christians went on worshipping in the Temple (e.g., Luke 24:45)”

11 Of particular relevance is the middle-Platonist Plutarch, who was alive at the same time as the Apostles (c. 46-120AD). See note 14 on page 131 below. See also the later writer Gellius, hist. 1.12.5 and earlier writers including Plato, Resp. 495e; Xenophon, Oec. 4.2; Aristotle, Pol. 8.2.1337b; Cicero, Off. 1.42; Dionysius of Halicarnassus, Roman Antiquities, 9.25; Livy, 8.20.3.
workmen and the foremen, forcing them to sit still and live indoors, and in some cases to spend the day at the fire. The softening of the body involves a serious weakening of the mind. Moreover, these so-called illiberal arts leave no spare time for attention to one’s friends and city, so that those who follow them are reputed bad at dealing with friends and bad defenders of their country. In fact, in some of the states, and especially in those reputed warlike, it is not even lawful for any of the citizens to work at illiberal arts.\textsuperscript{12}

This description highlights several issues of Greek (and Hellenistic) concern regarding manual labour. First, by their toil, they exact a “softening” on the physical body which Socrates (via Xenophon and Plato) suggests carries a corresponding effect on the mind. Further, they take away from leisure time, lessening the opportunity for participation in the political life of the polis, and undermine citizen loyalty to the polis. Even more moderate Classical accounts, such as that of Plato, tend to place various forms of work in a hierarchical order. At the top of the work hierarchy, according to Plato, are the forms of work which make one learned or wise, and at the bottom are the \textit{banausic} arts which are antithetical to wisdom. Plato lays out this vision in his \textit{Phaedrus}, where, in the context of his explanation about which souls are the best and as a result “follow after God” in their reincarnation, Plato provides a hierarchy of vocations, with “a craftsman” in the seventh of nine positions.\textsuperscript{13} One might try to rescue Plato here with the suggestion that by placing the artisan in the seventh position Plato merely leaves their status under benign neglect. But it is important to note that this seventh position is sandwiched in-between two categories consisting of middling prophets and poets (who earlier in the \textit{Phaedrus} are described as the recipients of mystical divine revelation) and Plato’s arch-enemies, the sophists and tyrants. This passage also provides a clear indication of Plato’s dualism in action. Both the gymnast (number four) and the artisan (seven) work hard, but the gymnast works with material “properly,” in the manner of Plato’s metaphysical charioteer who wrestles the body into submission, while the artisan simply wallows in material stuff and thus has a status barely above the despised sophists.

Even should a workman produce something of appreciable beauty, this was still not grounds for appreciation of the virtues of the workman, as Plutarch suggests, “Nay, many times, on the contrary, while we delight in the work, we despise the workman…. Labour with one’s own hands on lowly tasks gives witness, in the toil

\textsuperscript{12} Xenophon, \textit{Oec.} 4.2. Cf. the parallel text in Plato, \textit{Resp.} 495e and \textit{Xen.}, \textit{Oec.} 6.5. Aristotle also makes almost exactly the same point in \textit{Pol.}, 8.2, 1337b.

\textsuperscript{13} Plato \textit{Phdr.} 248a-e.
thus expended on useless things, to one’s own indifference to higher things… it does not of necessity follow that, if the work delights you with its grace, the one who wrought it is worthy of your esteem.”14 This is not surprising, as both Plato and Plutarch are working within an idealist aesthetic wherein the idea which guides the artist or artisan in making an object is wholly extrinsic to them and their success can only be judged on their ability to accurately replicate the ideal form or “higher things” in some material form. Along these lines Plato suggests that, “it is the user of an object, not its maker, who possesses knowledge of it.”15 Accordingly, this Greek disdain leaves us with the perjorative term “bausalic arts,” also called “illiberal arts.”

Given this well developed juxtaposition in Classical philosophy, there is some urgency behind my argument that the juxtaposition between the physically involved work and non-involved work I have noted in the gospels is of a different character than the classical and anti-fabricative equivalent. Where there are juxtapositions in Scripture between ἀχειροποίητος [acheiropoietos] and χειροποίητος [cheiropoietos], the contrast is between work exercised directly by divine “handless” agency (or under divine superintendence) and human craft which is exercised in isolation from any theological guidance. Without exception, appearance of χειροποίητος in the LXX is made in reference to idols and their fabrication.16 Further, ἀχειροποίητος does not occur in the LXX.17 Finally, underlining the uniqueness and thus theological nature of the distinction marked by ἀχειροποίητος in the NT, in classical usage, the actual opposite of ἀχειροποίητος is αὐτοφυής [autophyes =“natural”].18 It is important to affirm, then, that the true juxtaposition in the NT is between work which results in the making of idols and work which can re-construct God’s Temple. Only the latter is exercised under divine superintendence.

My reading of a more subtle reformist agenda—at least with regards to the possibility of Temple worship—in these gospel passages is further vindicated when one considers the intertextual backdrop suggested by the quotations from scripture.

15 Plato, Gorgias 491a.

17 This is also the case for pseudepigraphal literature. We find instances of χειροποίητος, cf. Sib. Or. 3:606, 618, 722; 4:28; 14:62; 23:29; Liv. Pro. 2:7, but not ἀχειροποίητος.

provided in the gospel texts, Isa 56:7; Jer 7:11; and implicitly Zech 14:21. These texts provide some clues as to the nature of the reforming (or rebuilding) agenda. Turning to Isa 56, which portrays the “full return from exile,” what stands out is the democratisation of worship with the “ingathering of the Gentiles.”19 Isaiah 56:7 provides the strongest example: “make them joyful in my house of prayer; their burnt offerings and their sacrifices will be accepted on my altar; for my house shall be called a house of prayer for all peoples.” In contrast, the quoted text from Jeremiah “forms part of the great sermon denouncing the Temple and warning against unthinking trust in it.”20 Jeremiah’s prophetic critique is about false worship and the subversion of worship which can occur there, as he outlines a few verses earlier in 7:4: “Don’t put your trust in illusions and say, ‘The Temple of the LORD, the Temple of the LORD, the Temple of the LORD are these [buildings]’” (Jer 7:4). In verse 11, Jeremiah asks rhetorically “Do you consider this House, which bears My name, to be a den of thieves?” and warns of impending judgement: “As for Me, I have been watching — declares the LORD”. Here is a similar critique of the dissolution and incoherence of worship found in Jer 22 which I have assessed above. The people have “set up their abominations in the House which is called by My name, and they have defiled it” (Jer 7:30).

In attempting to challenge the suggestion that NT writers are dismissing the concept of Temple altogether, it is important to acknowledge that there is a trajectory in Christian reflection which does take a strong stance towards the path of discontinuity. One might take the words of Jesus here to affirm discontinuity, particularly keeping in mind the trajectory of the gospel narrative with Jesus’ “prophecy of doom” in Luke 19:47 and the climactic moment of judgement marked by the rending of the Temple veil (Matt 27:51, Mark 15:38, Luke 23:45).21 Rowland argues that this trajectory is joined by Stephen’s speech in Acts, given his quotation of Isa 66:1 in Acts 7:49, which “suggests that Solomon’s building of a house for God marked a departure from the divine intention.”22 This is picked up in the Christian tradition in the Epistle of Barnabas which is strongly dismissive of the Jewish cult: “I discover, therefore, that there is in fact a Temple. How, then, will it be built in the name of the Lord? Learn! Before we believed in God, our heart’s dwelling place was

19 Wright, Jesus and the Victory of God, 418.
20 Ibid., 418.
22 Ibid., 474.
corrupt and weak, truly a Temple built by human hands, because it was full of idolatry and was the home of demons, for we did whatever was contrary to God.”

Yet one must take care before adopting the posture expressed here, as this trajectory is also often not far from anti-Jewish polemic in early Christian writing.

It is one thing to presume that a Temple is to be rebuilt, but one may still go on to argue that the worship offered there was to be reconstituted in contradistinction to what came before. To argue a position of absolute discontinuity would require that one assume the declaration by Jesus that the new Temple would not be built by human hands, meant by extension that the work inaugurated at Jesus’ resurrection would not involve human participants. But this is obviously not the case—Jesus’ resurrection spurred human participants to intensify their involvement in ministry, often resulting in their persecution and death. To this end, it is helpful to keep a reading of Christological rhetoric in context and consider how properly accounting for the doctrine of the ascension (e.g., John 14:12) may provide further theological support for the Temple-ethics which I am arguing for here, albeit with a broader and more democratised context. In short, ethics may benefit from not only a robust doctrine of the resurrection, but also of the ascension. This argument opens up the possibility that we may view the conduct of those Christian worshippers who continue to worship in the Temple in the first century and who appear to be appropriating such Jewish concepts as “firstfruits” in the fourth century (which I will treat at greater length in a subsequent chapter) as theologically continuous with early Christianity and not a departure from a supposedly more authentic early Christian anti-nomianism. Clearly, there is a more complicated dynamic here than a mere dismissal of Jewish practice and I will argue that a more theologically sophisticated account can be made of the transition of the meaning of the Temple. In the material which follows, I will attempt to provide some account of how this new Temple “not built with hands” nonetheless involves a great deal of handiwork. This provides a point of continuity for the moral world of the Tabernacle and its inclusion within

---

25 This point is made well in Ibid., 144-46 161. See also Douglas Farrow, *Ascension and Ecclesia: On the Significance of the Doctrine of the Ascension for Ecclesiology and Christian Cosmology* (Grand Rapids: Eerdmans, 1999).
Christian thought.

A full survey of the use by NT writers of temple imagery lies far beyond the scope of this study. However, there are two points upon which the NT texts have direct relevance to my broader moral argument. First, it is important to affirm that the concept of the temple is actually persistent into the NT and not merely discarded or replaced. Second, it is also important to note how these NT accounts of the new temple impinge upon the concept of “work” and might further texture the moral argument I am making more broadly in this dissertation. I will focus this study on the gospels and Pauline epistles, but some brief comments are also in order with regard to two heavily temple-centric texts: Hebrews and Revelation.

The writer of the Epistle to the Hebrews—who offers what Rowland describes as “the most extended exposition of Christ’s relationship to the cultic institutions of the Torah”—focuses not on the Temple, but the Tabernacle. Yet, this literature, Rowland claims is “unequivocal that the religion of the Tabernacle (and by implication the Temple also, according to Heb. 9.9) is redundant, made obsolete by a sacrifice which offers access to the very presence of God.” In a similar way, John’s Revelation also draws upon the Tabernacle account in portraying a Tabernacle/Temple which is co-extensive with the new creation. Yet, there is another way of viewing the meaning of replacement as this new sanctuary not made with human hands “replaces” the former institution. As Gregory Beale notes, “this is not so much a fading away of the former Temple institution but a fulfilment of all to which it pointed” As I hope to demonstrate in the subsequent material, fulfilment need not imply discarding, but can also imply conceptual absorption. In this way, the moral logic which I have drawn from the Hebrew Scriptures may continue to function in a concrete way. Though the account in Revelation vindicates my argument that the Temple imagery of Exodus may provide an apt starting point for a normative ethics of work, and further may provide the basis for that hope which may energise and

---

27 Ibid., 477. N. T. Wright agrees with this position, arguing that there is a link with Jesus’ quotation of Hosea 6:6, see Wright, Jesus and the Victory of God, 426.

29 Ibid., 371.
form our moral imagination, the details of its construction are completely omitted from the narrative. In seeking a post-ascension basis for moral work in the NT we find terse, but nonetheless more explicit detail in the gospels and epistles. For this reason, I turn to a study of the meaning of temple construction in these texts.

The gospel texts I analyse below hint at a Christological and ecclesial reconstitution of the Temple. While there are not any obvious textual parallels to the construction accounts in the Hebrew Scriptures I have surveyed above, there are clear references in the gospels to a building work which is undertaken by Jesus, the messianic man of peace. Here one finds an account of construction of a new ecclesial Temple which carries through hints at a shared coherence between the work being done by the disciples and the ordinary work of the people and more specifically a recourse to the same notion of craftsmanship that I have treated in this chapter.

3. Temple Building in the Gospels

Scholarly studies of work in Christian Scripture often assume that Jesus’ attitude towards work was one of absolute renunciation, given his cessation of work as a carpenter at the outset of his public ministry. In Miroslav Volf’s influential book on the theology of work, he suggests “We search in vain in the NT for a cultural mandate, let alone for the ‘gospel of work.’ Jesus left carpenter’s tools when he started public ministry, and he called his disciples away from their occupations.”30 One can find a similar sentiment, ironically, in John Howard Yoder’s critique of revolutionary zeal, The Original Revolution. Yoder suggests, “But Jesus, although his home was a village, found no hearing there, and left village life behind him. He forsook his own handicraft and called his disciples away from their nets and their plows. He set out quite openly and consciously for the city and the conflict which was sure to encounter him there.”31 Such a reading assumes that Jesus’ cessation from work was a renunciation of work per se and estranges Jesus’ perspective from the roundly positive affirmation of work by the apostle Paul (which I will discuss further below). As a consequence, we are left with a serious discontinuity between Jesus’ and Paul’s social visions. Paul’s words on work are seen as his own ministerial innovation, or as passively inherited from his Jewish or GR training, but certainly not drawing from the resurrected person who met Paul on the road to Tarsus. Yet even in Pauline studies, one finds skepticism about the concern for work.

30 Volf, Work in the Spirit: Toward a Theology of Work, 93.

In one dissertation on work in Paul’s epistles, Edwin Jackson Wood (1995) demonstrates this divorce between Jesus’ and Paul’s work ethic. After observing Paul’s tendency to describe ministry as work, Wood notes: “It is not obvious why Paul would describe missionary activity in these terms [of manual work]. Typical missionary activities like preaching, teaching, or distributing benevolences are not physically strenuous . . . the Gospel’s use of the metaphor is limited and from an agricultural context. It is not an adequate background for Paul.”32 As I have already argued in this and previous chapters, metaphors relating to temple construction are often to be found intertwined with appropriations of the language and concepts of work. Outside the occurrences which I have noted at the outset of this chapter, there are no explicit references to temple building in the gospels. However, one finds regular reference by Jesus to the language and experience of construction work to speak about the task of “temple building” to his apostles. To highlight this connection, I will focus on two examples. First Jesus’ use of harvest metaphors and second the parable of the builders in order to explicate the relationship between the ministerial work of the disciples and craftsmanship.

Jesus frequently describes his own ministry with the language of “work,” as when He suggests, “My Father is still working [ἐργάζεται / ergazetai], and I also am working [ἐργάζομαι / ergomai].”33 Even more striking along these lines is Jesus’ self-identification as a slave, a class in the GR world which existed in order to free the slaveowners from the regular requirements of manual labour. Mark reports Jesus’ saying to this end, which is straightforward, “For the Son of Man came not to be served but to serve [διακονήσαι diakonēsai], and to give his life a ransom for many.”34 In this way, Jesus’ self-identity is offered as a model for his disciples, as the foot-washing episode in John 13:14–16 suggests:

So if I, your Lord and Teacher, have washed your feet, you also ought to wash one another’s feet. For I have set you an example, that you also should do as I have done to you. Very truly, I tell you, servants are not greater than their master, nor are messengers greater than the one who sent them (NRSV).

The model of ministry as service-work is offered by example by Jesus, a model which he expects the disciples to imitate. That service is predicated on servant-hood

33 John 5:17. The physical toll of his ministry is further implied in John 4:6.

34 Mark 10:45.
or stated more strongly, slavery, deserves close attention. This same theme is also utilised in Matt 20:25–27; 23:10–12; Mark 9:34–35; 10:42–44 as a model for discipleship. In these texts, there is little ambiguity about the fact that Jesus is identifying himself as “master” and the disciples as “servants,” but his characterisation of these roles undermines their typically hierarchical nature. Jesus’ self-identification further undermines the notion that a “master” would not participate in labour, but rather serves as the ultimate example of one who labours.

3.1. The Disciples’ Task as ἐργάται: Luke 10 and Harvest Work

Jesus’ extended description of the disciples’ task as becoming “workmen” [ἐργάται / ergatai] in Luke 10 offers one of the most explicit descriptions of discipleship as labour and offers a particularly useful focal point for this study. First, the introduction offers an agricultural metaphor at the outset as Jesus uses agricultural labour to describe the disciples’ task: “He said to them, ‘The harvest is plentiful, but the labourers are few; therefore ask the Lord of the harvest to send out labourers into his harvest’” (NRSV).35 Given the urban context of many modern biblical readers and the advent of machinery changing the form of agriculture for those still in rural occupations, an agrarian reading which arises out of a thick understanding of the nature of the first-century harvest may help illuminate the rhetorical force of God’s sending out “labourers into his harvest.”

The process of harvesting in Iron-Age Palestine involves several stages and multiple work-roles in what is a complex process. Further, most crops (especially grain) ripen later in the agricultural year, and thus “harvesting was done in the summer, when the temperature is very high.”36 The extremes of heat in harvest time are underlined by Prov 25:13, “Like the cold of snow in the time of harvest are faithful messengers to those who send them; they refresh the spirit of their masters.”37 The process begins with reaping in which the grain was severed from stalks by iron or flint sickles. Given the nature of iron and flint tools, even preparation for reaping was a labour-intensive process, as related by an Ancient Egyptian text advocating for the leisurely vocation of the scribe:

Let me also expound to you the situation of the peasant, that other tough occupation . . . he attends to his equipment. By day he cuts his farming tools; by night he twists rope. Even his midday hour he spends on farm labor. He equips himself to go to the field as if he were a warrior. The dried field lies before him; he goes out to get his team.38

Once the tools are sharpened and reapers have completed their work, harvested stalks lying on the ground are bound into sheaves by binders. Sheaves are carried and put into piles, after which they are transported to the threshing floor. Borowski observes that the timing is not flexible for threshing: “threshing had to be done immediately after the harvest to free the farmer for his next task—picking grapes. In a good year, when the yield was great, threshing and grape picking overlapped.”39 Threshing involves very work-intensive crushing of the grain kernels. In the case of very small batches or certain tender crops, threshing was performed by beating it with a stick, but in the case of larger-scale harvesting, animals tread the grain, in some cases with a dragged sledge operated by humans. Part of the reason behind the time-consuming move of the grain sheaves for threshing is that the next process of winnowing relied on wind-energy. The material is thrown into the air with a winnowing fork, and that various components of the grain kernel settle in different places on the ground because of their different densities. Final cleaning of the grain is performed using a wooden shovel, which gathers the grain into a heap, which is then sieved coarsely and then finely. The final product of this is termed baer or “clean grain.”40

Unpacking this process offers several elucidations of the Lukan text. First, the task of harvest tended to involve a high degree of specialised workers with different tasks, drawing in the resources of the whole rural community. This may be why in Luke the harvest metaphor is reserved for the description of discipleship given to the seventy-two in Luke 10, rather than the otherwise similar description of the smaller group of disciples in Luke 9:1-6. This inherently social agricultural enterprise resonates with the sociality I have underlined in the Tabernacle and Temple-building process above. Furthermore, the task of harvest represents intense sustained labour during the hottest time of the year. One might find a faint resonance of this reality in the harvest metaphors in the Hebrew Scriptures, which, in some contrast to the NT, are often used in describing God’s acts of judgement as sifting the righteous and

39 Borowski, Agriculture in Iron Age Israel, 62.

unrighteous. Fitzmyer observes, “In the Lucan Gospel this harvest becomes a figure for the season when the mature preaching of the kingdom takes place…. In the OT the harvest was a figure of God’s eschatological judgment of the nations…. In John 4:36–38 missionary results are described, as here, in terms of it: disciples will have the joy of reaping what they have not sown. But the image also carries a warning as well as a promise, as the sequel of this episode makes clear.”41 As I have indicated in my analysis above, it is appropriate to read this passage as containing an eschatological message, but this need not imply only judgement. Rather, eschatology in the case of the harvest here seems to imply empowerment by the Spirit for the purpose of completing the work that God has already begun, a point emphasized already in Luke 9:1, and also assumed in this passage. In marked contrast to planting (which included plowing and sowing), which could be a time of tenuous hope for agricultural labourers (given that yields varied widely from year to year), harvest was a time of realised joy as the literal fruits of a person’s labour were gathered. In some sense, planting is the risky work (cf. Luke 8:5), while in contrast, harvest is backbreaking but comes with guaranteed reward. Though I have only detailed the process of the grain harvest here, harvest season would actually occupy a full month and included a variety of carefully timed enterprises including the picking and pressing of olives and grapes and ended with the community-wide measuring of grain for tithes.

Dwelling on the notion of harvest labourers also offers another reading of Jesus’ subsequent statements in Luke 10.42 Just after his description of the labourers being sent into the Lord’s harvest, he suggests, “Go on your way. See, I am sending you out like lambs into the midst of wolves.” There are a number of speculations as to what Jesus means by “lambs” and “wolves” here, but the image of innocence being sent into danger might be read as Jesus’ sending inexperienced apprentices into their first effort. They have been trained but not tested for the labour which faces them and consequently Jesus’ exhortation to them contains warnings of possible strife they may face, both in terms of austere circumstances (v. 4: “carry no purse, no bag, no sandals”) and potential danger (v. 10: “whenever you enter a town and they do not welcome you …”). This is, in a very real sense, a labour of “risk.” Also of

42 It is also noteworthy, that the synoptic parallel for this text in Luke is Mark 6:7-11, the third of the three significant call narratives in Mark (1:16-20; 3:13-19; 6:7-13), the first in ch. 1 has been analysed already above.
some interest in establishing the status of labour in this passage is Jesus’ suggestion that the “labourer deserves his wages.”

Jesus’ use of the labourer by analogy here vindicates the literal hard work of labourers in general. Further, in the context of this address, Jesus affirms that the vocation of ministry and teaching into which he sends his disciples is not meant to be a substitute for manual labour, but rather manual labour of a different sort and for a specific period of time.

3.2. Discipleship as harvest labor (John 4)

A similar example of this use of labour to describe the discipling craft can be found in John’s gospel. After Jesus addresses the Samaritan crowd, he exhorts his apostles to act as successors (using an agricultural metaphor) to a long line of spiritual labourers in John 4:31–38. This is an important text in John, and focusing on the harvest/reaper metaphor is helpful for understanding John’s conception of mission, as suggested by Teresa Okure: “In the Johannine conception, every missionary endeavour of every age means essentially and fundamentally a harvesting, a reaping of the fruit of the work of salvation accomplished definitively by Jesus and the Father.”

Some of this text is similar enough to the parallel synoptic harvest passage in Luke 10, described above, to forego close analysis. This is particularly the case with Jesus’ suggestion in vv. 35–36, where Jesus says,

Do you not say, “Four months more, then comes the harvest”? But I tell you, look around you, and see how the fields are ripe for harvesting. The reaper is already receiving wages and is gathering fruit for eternal life, so that sower and reaper may rejoice together. (NRSV)

Here we find the now familiar offering of harvest as a metaphor for “the gathering of people into the kingdom of God.” The agency is somewhat less clear-cut in the Johannine passage, as harvest appears to be already ongoing, “the reaper is already receiving wages” (v. 36a). However, even though the harvest has already been initiated, it is clear in Jesus’ words that the disciples are still called to participate in this process. This is a difference of emphasis and not of kind, as the Lukan text

---

43 Luke 10:7, NJB.

46 Cf. Talbert, Reading John, 123.
hardly defines their apostolic harvest purely in terms of the work of the seventy, Jesus’ involvement in the harvest of Luke 10 is also clear: they are “ἀποστέλλω... πρὸ προσώπου αὐτοῦ [apostello... pro prosopou autou =“apostles... [sent on] ahead of him”]. Further, Jesus depicts the act of harvest gathering even more concretely as a joy-filled vindication of sowing, “so that the sower and reaper may rejoice together” (v. 36b). If anything, the Johannine passage is more inclusive as to the involvement of the disciples in Jesus’ work. This suggestion brings me to analysis of a unique feature of this text in vv. 37-38 which further elaborates Jesus’ use of the language of labour. In Jesus’ use of the harvest metaphor here in John 4, the disciples are depicted as participating in an intergenerational enterprise, or a legacy of labour: “For here the saying holds true, ‘One sows and another reaps.’ I sent you to reap that for which you did not labor. Others have laboured, and you have entered into their labor.” In this passage, John provides a more explicit affirmation of harvest as a communal enterprise. My exposition of harvest in Luke above affirms that the point here can hardly be that the disciples need not strive, which is suggested by Brown’s overdrawn translation: “What I sent you to reap was not something you worked for. Others have done the hard work, and you have come in for the fruit of their work.”

This is not quite right, as the work has not already all been done. Reaping and harvest themselves imply months worth of hard work. In some ways a reading of this passage which presumes that the labour of “others” displaces the labour required of the disciples, misses the point. Instead, I would argue, the point of the passage centres around the location of risk in the agricultural enterprise. The sowers (work more explicitly described as exclusively divine in Luke) have done the fraught work of preparing the ground and casting seeds without knowing which, if any, would germinate and grow. Precisely because of this, as Ps 126 suggests, the activities of sowing and reaping (harvesting) are associated with different psychological states; “May those who sow in tears reap with shouts of joy. Those who go out weeping, bearing the seed for sowing, shall come home with shouts of joy, carrying their sheaves.”

Even if the reaping is finished, the next task, threshing, is itself back-breaking work. Consequently, when one enters “into their labor” (v. 38) one is still expected to work. The point is not whether work is involved, but whether one is involved in the beginning or end of the process.

48 Ps 126:5-6.
There is also possibly an eschatological element to this passage, the examination of which identifies other biblical resonances relevant to the status of labour in this text. The phrase “one sows and the other reaps” is the object of wide-ranging conjecture as to possible literary parallels. Many of these (Deut 20:6, 28:30; Eccl 2:18–21, Job 31:5-8, Mic 6:15), however, carry negative connotations, as Brown notes, “the reference there is a pessimistic one, namely, that a catastrophe intervenes to prevent a man from reaping what he has sown.” Michaels draws attention to the possible shared imagery here of “messianic abundance,” found earlier in the text of John 2, with Jesus’ manufacture of a great abundance of vintage wine at the Cana wedding. Of particular interest here are resonances with the eschatological vision found in Amos 9:13:

The time is surely coming, says the LORD, when the one who plows shall overtake the one who reaps, and the treader of grapes the one who sows the seed; the mountains shall drip sweet wine, and all the hills shall flow with it.

To read the mention in v. 35—“Four months more, then comes the harvest”—as a reference to an eschatological superabundance, as Michaels does, stretches the text in v. 35. However, as he points out, one can find signs elsewhere in the pericope to justify such a reading, as with the promised “spring of water gushing up to eternal life” in v. 14 and the mutual joy described in v. 36. This mention of eschatology also draws attention to Jesus’ allegorical use of “by,” through which he pits his “food” [βρῶσιν / brosin] against the ordinary food [τροφὰς / trophas] which the disciples have purchased in the city (John 4:8). His food is not literal bread, but rather it is “to do the will of him who sent me and to complete his work.” This use of allegory parallels Jesus’ characterisation earlier in the same chapter (with the woman at the well) of his living water [ζῶν / ὕδωρ] over against the ordinary water she is asked to give him to drink. This sort of dialogue occurs in several other places in John as well, and as Morris observes, “the disciples misunderstand Jesus by taking his words in a literal and material fashion.”

I bring attention to this allegorical use of “bread” and “water” by Jesus in order to emphasise how the purpose here in John 4 is not to offer a Platonic exaltation of spiritual over against ordinary materiality,

---

50 For a helpful elaboration on the meaning of this passage, see Douglas K. Stuart, Hosea-Jonah, WBC (Dallas: 1989), 398-99.

but rather to use allegory to draw attention to an eschatological reality. Jesus’ logic, expressed here by allegory, is perhaps best explained by Deut 8:3 which is likely behind His “you do not know about” statements about work and food (John 4:32).\textsuperscript{52} The Deuteronomy passage opens with a reminder of the wilderness economy: “He humbled you by letting you hunger, then by feeding you with manna, with which neither you nor your ancestors were acquainted, in order to make you understand that one does not live by bread alone, but by every word that comes from the mouth of the LORD.” An eschatological reading of this allegory which grapples with the reality of Deut 8 and Amos 9 enables the reader to avoid what Haenchen rightly describes as a docetic reading.\textsuperscript{53} Instead one finds Jesus’ discourse on harvest in John to emphasise not the work-free “leisure” of the new life, but rather the proper role of divine initiation (sowing) and joy-filled participation by the disciples as part of a long line of discipling labourers.

3.3. **Discipleship and Ancient Near-Eastern Homebuilding in Luke 6**

Another example of labour offered by metaphor as a model for obedience to God can be found in Jesus’ Parable of the Builders in Luke 6. In this case, Jesus makes use of an explicit description of building to refer, at least obliquely, to the discipling task. Jesus opens this parable by setting exactly this connection to labour: “I will show you what someone is like who comes to me, hears my words, and acts on them. That one is like a man building a house.”\textsuperscript{54} As is often the case with the parables, Jesus’ introduction is compact and terse. With the advent of modern labour-saving machinery and the dichotomisation of the homebuilding enterprise into design (i.e., by architects) and construction (i.e., by skilled labourers) some of the force of the metaphor being employed may be obscured for the contemporary reader. Bailey cites a source which provides helpful illumination of the context:

The enormous effort required to build a house in the ancient world was more perfectly understood by Ibn al-Tayyib who began his reflections on this parable by saying, “Every Christian knows that building a house is not an easy endeavor. Rather it involves exhausting and frightening efforts,

\textsuperscript{52} Deut 8:3 is mentioned directly in both Matt 4:4 and Luke 4:4 (see also 12:29-30).

strenuous hardships, along with continuous and life threatening struggles.”

Vindicating Ibn al-Tayyib’s suggestion, this parable quickly turns to crisis, “when a flood arose” (v. 48) and as Bailey’s analysis demonstrates, this was a regular and geologically determined reality for Palestinian homebuilders. A home had to be completed in the “dry, warm days suitable for building houses” in the summer. This is because during the excessively rainy winter, “the ground begins to turn into the consistency of chocolate pudding” and consequently if a house is not built “on the underlying rock, it will last only as long as the ground under it remains dry and prevents settling.” This provides a thicker context for reading the parable, as Bailey relates:

It is easy to imagine a builder in summer, with little imagination or wisdom thinking that he can build an adequate one-level house on hard clay. With his pick he tries digging and finds the ground is indeed “like bronze.” The walls will not be more than seven feet high. It is hot. The idea of long days of backbreaking work under a hot, cloudless sky does not appeal to him. He opts to build his simple one-or two-room home on the hardened clay. The underlying rock is down there somewhere—it will all work out! He constructs a roof with a reasonable overhand and is pleased that he has managed to finish before the onset of the rains.

As this analysis, and indeed a plain reading of the parable reveals, this parable is about foundations. However tempting it may be for an interpreter to immediately turn to the theological referent which Jesus intends the parable to describe, remaining on the literal level reveals that this parable is also about the determined effort which is wrought by a builder who is a true artisan. Reaching deep bedrock can be a backbreaking task and consequently there can be a temptation to cut corners. The target here is likely not just about a foolish decision, or lack of forethought by the person who built their house “on the ground without a foundation,” but about the deliberate avoidance of hard labour. This offers a rather stringent rejoinder to the Classical disdain towards labour outlined above. An interesting rhetorical inversion

56 Ibid., 323.

57 Ibid., 323-24

58 Ibid., 323.

59 This interpretation is reaffirmed with similar use of building as a metaphor for ministry in Matt 21:28 and 25:16.
of this passage is the mention of workers of lawlessness in Matt 7:23. The disciples’ work is depicted as building which notably involves striving, and their hard work is not set in opposition to their adversaries, but rather is called for in light of the hard work being done on behalf of evil. In similar ways to the harvest metaphor described above, the “building” work of Jesus’ followers is described with explicit reference to craftsmanship. While contemporary conceptions of craft often emphasise design, the work of labourers and craftspeople on which Jesus draws are physically implicated in their work, and consequently the reference to labour in these cases implies work which is not only carefully conceived, but also physically strenuous and occupies their attention for an extended period of time.

4. Labour in Paul’s Epistles

The following study of construction metaphors in Paul’s writing is not merely a parallel study to the preceding one, but a complementary one. I will argue that the ideas that are largely implicit in the words of Jesus are developed in similar ways by Paul as he also explicates a relation between Christian worship and work. The Pauline material which I will go on to analyse—seen in light of my argument that the Temple is reconstituted in the person of Christ and his disciples—consolidates this new account of Temple construction.

One can hardly overstate the impact of Paul’s reference to his work as a σκηνοποιός [skēnopoioi = literally “tent-maker,” also translated “leather-worker”] for early Christians. Also in some contrast to gospel studies, the relationship of Paul’s labour to his ministry has been the subject of much discussion among modern Pauline scholars. While there remains disagreement among scholars about some of the particulars, Still is able to observe with some confidence, “Contemporary interpreters of Paul concur that the apostle worked as an artisan in conjunction with his mission. They are also agreed that his toil as a tentmaker marked not only his

60 The literal Greek phrase “ἐργαζόμενοι τὴν ἀνομίαν” [ergazomenoi tēn anomian], is translated opaque as “evildoers” in the NRSV. See also Matt 13:27 and the “two masters” which are served in Luke 16:13.

missionary activity but also his apostolic self-understanding."  

Paul does not actually mention explicitly in his own writings that he is a tentmaker, only generically that he does manual labour for the purpose of supporting himself. However, one finds specific mention of his trade in Acts 18:1–3 which, presuming one trusts the account presented there, introduces Paul’s move to Corinth and describes the logistics of his stay there: “Paul went to see them [Priscilla and Aquila], and, because he was of the same trade, he stayed with them, and they worked together—by trade they were tentmakers.” This detail, as Thiselton puts it, “coheres with the greeting in [1 Cor] 16:19, namely, that Paul stayed for 18 months in Corinth in the home of Aquila and Prisca.” There is no textual uncertainty or historical reason to doubt these details, and it seems right to assume that Paul was a tentmaker by trade and that he practiced it particularly during his stay in Corinth as suggested in 1 Cor 4:12, “we toil, working with our own hands.”

Paul’s statements in 1–2 Thessalonians also indicate that he prides himself on the practice of this trade as a means of self-support. This pride in self-support is echoed in his speech as preserved in Acts 20:32–35, and this further seems to suggest that this bi-vocational life may have been Paul’s preferred pattern throughout much of his ministry. Studies of 1 Corinthians have also illuminated how this choice of tent-making work was deliberate and not because Paul was without other options. As

64 Thiselton, The First Epistle to the Corinthians, 23.

65 1 Thess 4:10-12, 2 Thess 3:7-12, also suggested in 1 Cor 9:15-18 and indirectly in Eph 4:28. See also the mention of Barnabas engaging in the same practice in 1 Cor 9:6.
Thiselton relates, “many at Corinth who became Christian believers would have liked Paul to turn ‘professional’; to be like ‘the sophists, those ‘visiting professional preachers’ who relied upon… admirers, all expert talkers…’ (like the chat-show hosts or media figures of the present day).”66 Thiselton notes further:

In a city where social climbing was a major preoccupation, Paul’s deliberate stepping down in apparent status would have been seen by many as disturbing, disgusting, and even provocative. This comes to a head partly in definitions of “apostle” but more especially in Paul’s “foregoing his right” to receive maintenance (and hence patronage and reciprocal obligations) as a genuine professional in the sphere of religion and rhetoric.67

Given the degree to which the problems of the Corinthian church may have been intertwined with a “high-status culture,” choosing to continue in his work as a tentmaker may have been a deliberate choice for the purpose of enabling a ministry to the Corinthians which targeted those issues of “boasting” that were intrinsic to the problems with their church.68

This integration of work and ministry may also have been expressed in the location of Paul’s ministry. Hock suggests that Paul’s various workshops functioned as a social setting for Paul’s missionary preaching, alongside synagogues (Acts 9:20, 9:29, etc.), homes (Acts 16:15, 18:7, etc.), and the occasional public stoa (Acts 17).69

Along similar lines, Wood conjectures that Paul may have preached in the “meeting hall of a trade association.”70 Hock reconstructs this workshop ministry as follows:

During the long hours at his workbench cutting and sewing leather to make tents, Paul would not only have been supporting himself, but he would also have had opportunities to carry on missionary activity (see 1 Thess 2:9).

Sitting in the workshop would have been his fellow-workers and perhaps one or more visitors, perhaps customers or perhaps someone who has heard of this tentmaker-“philosopher” newly arrived in the city. In any case, they would have been listening to, or debating with, Paul, who had raised the topic of the gods and was exhorting them to turn from idols and to serve the living God (1:9-10). Some of those who listened—a fellow-worker, a customer, an

66 Ibid., 24.

67 Ibid., 13.

68 This theme of status inconsistency is developed at some length by Thiselton in his commentary on 1 Corinthians. See Ibid., 40. Dale B. Martin, “Tongues of Angels and Other Status Indicators,” Journal of the American Academy of Religion 59, no. 3 (1991): 547-89.

aristocratic youth, or even a Cynic philosopher—would want to know more about Paul, about his churches, about his Lord and would return for individual exhortation (2:11-12). From these workshop conversations some would eventually accept Paul’s word as the word of God (2:13).71

As Hock suggests, it seems reasonable to take Paul’s comments in 1 Thess 2:9 seriously, that “we worked night and day.”72 Consequently, it seems reasonable to suggest that in addition to his preaching after-hours in various locations Paul may well have had less formal conversations about his faith with interested customers in the context of his workshop. Studies of similar workshops in the GR context elaborate the likely physical circumstances of Paul’s workshop. Hock affirms that his workshop was likely quiet enough—with only the noise of stitching—to allow for conversation.73 Further, Hock affirms that the work of tent-making was itself physically demanding, contrary to suggestions that Paul’s might have been a “soft” trade.74

As this brief introduction has indicated, Paul’s ministry was intertwined with his practice of manual labour. This led him to commend self-support (to the Thessalonian church especially) and likely also to use his workplace as a site for preaching and ministry. I would affirm that Paul considered his manual work to be important and that he conceived of it as being related to his apostolic ministry. In defending this suggestion, it is helpful to note the extensive degree to which Paul’s statements on work and ministry and their interrelation are treated normatively in Patristic and later monastic theology.

4.1. Ministry and Craft in Paul’s Epistles

In §3 above I focused particular attention on Jesus’ use of harvest metaphors and the parable of the builders as examples of a deployment of the vernacular and wisdom of manual labour in describing the Christian life. It is noteworthy that Paul echoes both these metaphors in his description of ministry in 1 Cor 3. It is to this passage that I will first direct my attention before turning to Eph 5 in order to

72 Ibid., 32.

73 Ibid.

74 Ibid.
explicate another use of the language and logic of work in ways that are in continuity with the gospel descriptions examined above.

In 1 Cor 3:5-4:21, Paul offers an application of the principles he has outlined earlier in the letter. In the preceding materials, Paul deploys, as Thiselton puts it, a “corrective redefinition of ‘spirituality’ at Corinth” such that spiritual maturity and wisdom are to be understood by “Christological criteria.” The behaviour of the Corinthian Christians has been “as infants in Christ” (3:1) and “merely human” (3:4) and after a call for a new wisdom which finds the cross as its paradigm (1 Cor 1:17, 19–22, 24–25, 30; 2:1, 4–7, 13) Paul offers an application to ministers and their ministry by way of three “explanatory images”: God’s field [θεοῦ γεώργιον / theou geōrgion], God’s Building [θεοῦ οἰκοδομή / theou oikodomē], and God’s Holy Shrine [ναὸς θεοῦ / naos theou]. With the first image, “God’s Field,” Paul casts the agricultural metaphor in a slightly different form than is the case in Luke 10 and John 4, examined above. Paul’s primary purpose is to emphasise God’s role in the successful growth of a church over against any human leadership. So he suggests, “I planted, Apollos watered, but God gave the growth. So neither the one who plants nor the one who waters is anything, but only God who gives the growth” (4:6-7). Having firmly established the priority of divine agency in this process, Paul goes on to relativise the significance of individual human contributions, “It is all one who does the planting and who does the watering” (4:8a, NJB). One result of this relativisation by Paul is to undermine social hierarchy in which leaders in his audience may be manoeuvring for position. However, this relativisation does not subsume their contributions, as Paul suggests “each will receive wages according to the labor of each” (4:8b). This commendation about wages echoes Jesus’ statement in Luke 10:7 examined above and infers similarly that the work described is not fundamentally insignificant.

75 Cf. Thiselton, The First Epistle to the Corinthians, 296.
76 Ibid., 252.
77 These images are explicitly referenced in vv. 9 and 16 respectively. Ibid., 295, 147ff.
78 Italics mine.
79 I have purposefully chosen the opaque use of pronouns in the NJB as this seems a helpful rendering of the ambiguity in Paul’s Greek here.
80 Ibid., 303. Cf. Paul’s recapitulation of this relativising theme in the well-known body metaphor in 1 Cor 12.
81 See also the parable in Matt 20:1-16, though it is worth noting that wages are relativised in a different way in this passage.
Attempting to identify a concrete referent for Paul’s use of µισθός [mīthos = usually translated “pay,” “reward,” or “wages”] is complex, as demonstrated by the diversity in commentators’ conclusions. However one can make several affirmations with confidence. The mention of µισθός is deployed in order to affirm that their pay is from God and in this way, as Thiselton suggests, “the image of pay or reward serves primarily to intensify the point that Paul and Apollos are responsible to God, their employer, for judgments about their success or failure, not the community… Stipends accorded by the church do not indicate this worth, against the assumptions of a consumer-driven world.” There is also likely an indication here of the reward and punishment due ministers, which is (again) bestowed by God alone. The REB rendering of v. 9, “We are fellow-workers in God’s service,” captures the sense in the wider passage that what is at stake for the Corinthians is peer-comparison and thus that ministers carry an equal status in their participation. Nonetheless, Paul’s closing comment in v. 9 emphasises the nature of ministry as labour, “After all, we do share in God’s work; you are God’s farm, God’s building” (NJB). There is good reason for the more generic use of “field” or “farm” here rather than “vineyard,” as “the imagery carries with it the themes of (i) belonging to God; (ii) inviting growth and fruitfulness; (iii) needing the nurture and care of those who have been assigned to this task by the owner. The metaphor excludes self-sufficiency, mechanistic routinization, and stasis.” The Corinthian church is identified here by Paul as both the focal point of God’s labours and a field from which some are called to be labourers.

These themes are recapitulated and intensified in the next image: God’s building. Paul’s content in this second image is more similar than the previous to its gospel parallel. As in Jesus’ parable of the builders Paul is principally speaking about the endurance of Christian ministry. Accordingly, Paul analogises his ministry in the language of craftsmanship: “By the grace of God which was given to me, I laid the foundations like a trained master-builder [σοφὸς ἀρχιτέκτων / sophos architektōn].” Though Paul may have laid the foundation (Christ), he is not the only builder working and so even when the work is handed on to an apprentice or a co-worker (“someone else is building on them”) “each one must be careful how he does the

82 Ibid., 304.

84 Thiselton, *The First Epistle to the Corinthians: A Commentary on the Greek Text*, 306.
building” (v. 1 Cor 3:10, NJB).85 One important element in this process of ministerial building is, according to Paul, the importance of a properly identified foundation. He points to the bedrock of “Jesus Christ” (3:11) upon which all, master-builders and lesser ones, must build. Shanor’s analysis of Paul’s self-identifying language of ἀρχιτέκτων alongside other ANE literary parallels offers some illuminating context.86 He confirms my suggestion that the material circumstances of the labour of building are relevant to understanding this passage by Paul, observing, “the building or repair of a temple involved a number of individual builders, each under separate contract to complete a defined portion of the total project… the general supervision of day-to-day work fell to the architektōn.”87 Regarding the suitability of temple construction contracts as suitable for understanding Paul’s language here, Shanor suggests, “To those who lived constantly in the shadow of both ancient and recently completed (or yet uncompleted) temples, the reference to a recognised class of temple-builders would have been absolutely clear.”88

At 1 Cor 3:12, Paul’s language takes on a decidedly eschatological tone, and as I have demonstrated above with Jesus’ language, it is important to observe here how an eschatological meaning need not exclude a domestic one. The two can be, as is the case here, mutually informative. Thiselton argues that Paul’s language in v. 12 is “apocalyptic epiphany: a universal disclosure in which all hitherto protective veils of ambiguity and hoping-for-the-best (or, equally, fearing-for-the-worst) are removed in a definitive, cosmic act in the public domain.”89 In this way, Paul’s ambiguity about the outcome of hard work in ministry is not due to some intrinsic deficit within work itself, but rather:

The “testing by fire” connected with the last judgment simply underlines the subsidiary but important point which Paul elaborates in 4:4 and 5, that such is the opaqueness and duplicity of the human heart that even the builders of authentic work will not know definitively “how they build” until God’s own definitive verdict declares this and it becomes publicly visible at the last judgment. Still more to the point, one cannot judge the quality of the work of

---

85 Wood provides some reflection on the possible range of meanings associated with Paul’s use of companion language indigenous to the crafts and trades of his day, including “synergos” in “The Social World of the Ancient Craftsmen,” 165-70.

87 Ibid., 465.

88 Ibid., 466.

89 Thiselton, The First Epistle to the Corinthians, 312.
another builder: others are “either doing that which will last or that which will perish,” and only time and the day of judgment will determine this.⁹⁰

The process of discerning building quality is, in both the eschatological and realistic senses, opaque and for similar reasons. Of further note for the task of this dissertation is the fact that this eschatological fire [πῦρ / pyr] does not obliterate the work of the artisan but rather serves to reveal in an apocalyptic sense [ἀποκαλύπτω / apokalyptō] the purity of work. In this way, Paul’s imagery of burning in this passage does not undermine but rather intensifies the force of his metaphor as drawn from labour. Inferior work, signified by “wood, hay, straw” (1 Cor 3:12) will perish at the last judgement, while superior work, signified by “gold, silver, precious stones” will μένω [meno =“abide” or “survive”].⁹¹ Again, Shanor affirms this reading in parallel literature:

The strength of his [Paul’s] appeal for quality rests upon his certainty that both the manner of approach to the work (pos) and the durability of the materials will be subjected to final examination. This again closely parallels the secular tradition, since final payment for nearly all public, private and sacred construction was withheld pending final inspection, i.e., until the commissioners and their approved inspector were satisfied that the work had been done according to the terms stated in the contract.⁹²

Paul is specifically urging the Corinthians here to forego attempts to discern superior ministerial craftsmanship (gold) from inferior work (hay) as this process of discernment can only be coherent at the completion of the building process (the last judgement) and consequently only open to judgement by God. What one finds in Paul’s argument here is an account of craft that is strikingly resonant with the aesthetic by Rowan Williams which I have summarised above in chapter 3 §3. Paul’s desire is to refocus the energy of the Corinthians such that they participate as co-workers (and not audience members or mere critics) striving to produce superior work for which one can expect wages [misthon in 1 Cor 3:14] and by which the builder will “be saved” (1 Cor 3:15).

The third image, “God’s Holy Shrine,” is deployed by Paul in continuity with the preceding two images. As Thiselton relates, “ναός [naos] denotes the temple building itself. Hence it carries forward the previous image, but in a specific way

---

⁹⁰ Ibid., 312.

⁹² Shanor, “Paul As Master Builder,” 468.
which narrows its focus to the issue of holiness and to God’s sanctifying indwelling.”93 While it may be tempting to think of the introduction of language of “holiness” at this juncture as discontinuous with the more mundane circumstances and work of building from which Paul is drawing the metaphor in all three images, I would suggest that if one follows the trajectory of Paul’s usage the conclusion is precisely the opposite. Here Paul’s description of excellence in building as a metaphor for Christian community implicates the normal act of building in the Christian life. The very act of using manual work as material for a metaphor implicates it on a literal level in the same economy which Paul describes here. Paul confirms this in the wider contour of the epistle by using his suggestion, “For God’s temple is holy, and you are that temple” (1 Cor 3:17) as a launchpad for the more specific later discussion of the ethics and conduct of the Corinthian church. In a sense continuous with the Hebrew materials surveyed above, the work which is the activity of a holy people is deployed by Paul in verses 16-17 as a driving force in the Christian ethical life. Because the Corinthian church community (and by extension the individual members) are consecrated as God’s ναός “sinning against ‘consecrated persons’ who are corporately God’s temple… defiles the joint sharing in the Spirit who consecrates the temple (κοινωνία).”94

With this examination of Paul’s use of construction analogies in 1 Corinthians 3, I have drawn out the resonance between the presentations which have been examined here of priesthood, discipleship, and apostleship as shaped by the concept of craftsmanship. Though one finds both continuity and change with regards to the relationship between work and priesthood in the Hebrew and Christian conception, there is a theologically construed agreement across the canonical text that worship and work exist in a mutually informing relationship. I have drawn attention to the ways in which both the call to ministry and subsequent worship by believers, draws in and implicates a moral account of work. Just as YHWH’s call to the people of Israel to be his holy people implicates work and its products, so too Jesus’ call to his disciples and Paul’s epistles use work as a metaphor for the task of ministry to which they are called.

There is an emphasis in 1 Corinthians on human participation in work which ultimately has divine agency, yet one finds a continued affirmation of the importance and coherence of individual human contributions set amidst what is a communal

93 Thiselton, The First Epistle to the Corinthians, 314.
94 Ibid., 315.
effort. As Lanci argues, “Paul encourages the Corinthians to understand themselves as people... coming together with many different skills to construct a building which will serve as a Temple of God.” This cooperative vision of church building work is described paradigmatically in Paul’s statement: “I planted, Apollos watered, but God gave the growth. So neither the one who plants nor the one who waters is anything, but only God who gives the growth” (1 Cor 3:16-17). This relativisation of individual contributions is accompanied by a relativisation of expectations with regards to outcomes. The process of discerning building quality is opaque and thus the ultimate act of judgement is reserved by Paul for God. Yet, as Paul suggests, one may still expect that the Corinthian community might be expected to—guided by the spirit—derive their judgements of this work. Discernment of craftmanship in building is not discarded, but rather it is now seen through an eschatological lens and granted an intergenerational duration. Given all this emphasis on the building work of Jesus’ disciples who join in his ministry, it makes sense to find Paul’s argument in 1 Cor 3 situated within explicit Temple theology.

A survey of additional Pauline Temple texts shows a recapitulation of a number of themes which I have treated above, and also makes clear that for Paul, the Christian task of Temple construction is an ecclesial task. Even the personal tone granted by the “body” language in 1 Cor 3:16-17 and 6:19, is attended by exclusively plural second person pronouns: “Do you not know that you are God’s Temple and that God’s Spirit dwells in you? If anyone destroys God’s Temple, God will destroy him. For God’s Temple is holy, and you are that Temple.” (1 Cor 3:16–17). A similar appropriation of ecclesial Temple building can be found in Eph 2:19–22:

So then you are no longer strangers and aliens, but you are fellow citizens with the saints and members of the household of God, built on the foundation of the apostles and prophets, Christ Jesus himself being the cornerstone, in whom the whole structure, being joined together, grows into a holy Temple in the Lord. In him you also are being built together into a dwelling place for God by the Spirit. (ESV)

Here also one finds a Temple which is not static but constantly growing. As Beale

---

96 Italicmine.

97 This conclusion is defended at length with regards to the Corinthian correspondence in Ibid.

98 This theme is developed extensively across Scripture by Beale in The Temple and the Church's Mission.
describes it, this Temple is made for expansion, meant to concentrically expand to include the whole cosmos. The Greek term used to describe growth here (αὔξει \[auxeι\] in v. 21) carries a number of senses, as Günther relates, “The thought here is not solely of numerical increase, but also of maturity and the consolidation of the community in Christ from which good works naturally grow.” This multilayered notion of growth is described using an agricultural analogy later in 2 Corinthians: “whoever sows sparingly will also reap sparingly, and whoever sows bountifully will also reap bountifully…. He who supplies seed to the sower and bread for food will supply and multiply your seed for sowing and increase the harvest of your righteousness. You will be enriched in every way to be generous in every way, which through us will produce thanksgiving to God.” (2 Cor 9:6–11). Further, given this democratisation of worship and the ingrafting of Gentiles into Israel’s new Temple, in some sense, the task of Temple construction no longer has a readily perceptible terminus. Temple construction, at least on this side of the eschaton, is now indefinitely ongoing. Both the corporate and ecclesial aspects of this task of construction which I am describing here have clear resonances with my argument above that the work of Temple construction is an inherently social and democratic task. Further, church building in Paul’s account is intertwined with moral theology. Here, particularly in Ephesians, we find an explicit defence of the idea that the act of constructing the “place for worship” is meant to be a morally formative task, tied to the increasing adornment of holiness as “the whole structure… grows into a holy Temple” (2:21) which is pneumatically sustained.

It is instructive to make a study of the stones which constitute this building. The building stones and foundations, as described in Ephesians, connote that this new structure is a hybrid, drawing in both Jew and Gentile, prophets and apostles. The wider context behind the Temple text in Eph 2:19-22 also affirms this point, as the text is rich with the language of mutuality and reconciliation. Jew and Gentile are alike in being “dead in our trespasses” and in being “made… alive together with Christ” (verse 5). In verse 16, Paul goes on to suggest that Christ’s redeeming work “might reconcile us both to God in one body through the cross.” The consequence of this, as Peterson puts it, is that “new Temple imagery implies the renewal of worship for Israel as well as the inclusion of Gentiles in God’s house.”

\[99\] NIDNTT, “αὔξει” 2:129.

avoid being unduly distracted from this basic premise by the much contested
description by Paul in verse 15 of the way in which Christ’s work of peace abolishes
τὸν νόμον τῶν ἐντολῶν ἐν δόγμαιν [τὸν νόμον τῶν ἐντολῶν ἐν δόγμαιν =“the law
with its commands and dogmas”]. What one finds here is an abolition of whatever
ordinances [Gk: δόγμα / dogma] served to create hostility and undermine Christ’s
reconciling work of peace between Jew and Gentile.101 It is important to understand
how Paul’s description of abolition is subordinate to the broader purpose he is
describing here, as one could construe (wrongly, I think) Paul’s ethic here as being
accommodationist. Keeping in mind the Temple imagery here, it seems more
appropriate to focus not on the pursuit of the experience of peace, but rather the
conditions for reconciliation, which are—in the sense of Temple theology—
eschatological. To this end, Peterson argues that the church as described in Ephesians
is to be viewed eschatologically, “as already existing in Christ but moving towards
the final revelation and enjoyment of what is now true through faith in him.”102 In this
way:

every Christian gathering may be regarded as an earthly expression of the
heavenly church…. But this is only an anticipation of the ultimate reality, the
fellowship of the heavenly city or “the new Jerusalem”, which will one day
come down “of heaven from God” (Rev. 21:1-4). In that city the ideal of the
Temple is fulfilled and God’s people live in his presence forever,

experiencing the blessings of “a new heaven and a new earth” (Rev.
21:22-22:5). In the new creation, the Old Testament hope of the nations being
united in the worship of God is realized (cf. Isa. 56:6-7; Rev. 7). The task of
the church is to keep on looking “up” or “forward”, rather than merely
looking inward at itself or even outward at the world and its needs (cf. Col.
3:1-4).103

What one finds here, then, is an account of communal ecclesiality which is
constituted by an eschatological vision. As I have argued above, the purpose of
eschatology is not to provide a context for inclusion which can function as a
therapeutic balm.104 Indeed, the purpose is far richer. Human work can be motivated
and shaped by a vision for the future, but this vision for the future is not unmediated.

101 For an extended survey of the various options for “fence” and “ordinances” see Ernest Best, A
Critical and Exegetical Commentary on Ephesians (Edinburgh: T&T Clark International, 1998),
250-69. See also Markus Barth, Ephesians, AYB 34 (New York: Doubleday, 1974), 283-91. The
argument here also resonates with Paul’s argument in Rom 3:31.

103 Ibid., 172.

104 See Chapter 3 §1, “Is Eschatology the appropriate site for a theology of work?”

156
Instead, it is the very act of becoming “fellow citizens with the saints and members of the household of God” (as Paul suggests in Eph 2:19) who worship together “addressing one another in psalms and hymns and spiritual songs, singing and making melody to the Lord with your heart” (Eph 5:19) that we can deploy this future vision and find it comprehensible. 105 This moral vision which I have explicated with regards to its purchase on the work of the people, is sustained through this hybrid ecclesial community. In this way my argument—that Temple and church “construction” portray a form of work which is inherently a social and democratic task, invoking the work of the Spirit and remaining contingent upon the agency of the Creator God—is not a freestanding moral account, rather it is embedded and sustained in an ecclesial space. There is, then, a particular and essential relationship between the moral vision of work portrayed in Christian Scripture and the act of worship. The next logical step in my inquiry, to which I now turn in part two of this study, is to examine the specific content of the practices of worship in seeking a doxological point of synthesis for this moral vision.

---

105 It is, as Bernd Wannenwetsch suggests, in worship that “the congregation experiences the reconciliation of antitheses which had hitherto been deemed irreconcilable.” Bernd Wannenwetsch, *Political Worship: Ethics for Christian Citizens* (Oxford: Oxford University Press, 2004), 146.
Part 2
Moral Maintenance: Sustaining Work Ethics in Christian Worship
Introduction to Part 2

In her recent volume on the theology of work, Esther Reed argues that “the meaning and ethics of work is learned, at least in part, from the Church’s practice of worship.”1 In her account, she goes on to suggest (with reference to liturgical reasoning) that “the meaning of work as learned abductively in worship expands our perceptions of work from what we do day by day as individuals to the multiple interconnections that our various activities entail.”2 I am highly sympathetic to Reed’s argument, and in the chapters that follow, I take up a line of inquiry which I hope might complement her account. Indeed, one may hope that authentic contemporary practice and the exegesis of Scriptural instruction regarding worship might both be brought to bear on our moral life. Such an enhanced account may be particularly valuable for those situations in which contemporary worship practice is perfunctory rather than vital, and habit-led rather than habit-shaping. With this in mind, I will seek to illuminate the moral account which lies latently in contemporary eucharistic practice, by turning to a specific aspect of those practices—the offertory rite—in light of the rich (and often neglected) account of worship narrated in Christian Scripture. Among the various aspects of contemporary eucharistic practice, it may well be that offertory is the most diminished aspect of the rite. A brief example will serve to demonstrate my point. In my own weekly worship, drawn from the Scottish Episcopal prayerbook, the congregation speaks the words, “we bring

---

1 Reed, Good Work: Christian Ethics in the Workplace, 35.
2 Ibid., 50.
these gifts.” Yet an attentive outsider observing might find this claim to be somewhat incongruous. What exactly have those gathered in the place of worship brought? In practice, the offertory overlaps with the presentation of the table (where the bread and wine are prepared for serving) in many liturgies and so this reference to what “we bring” may be taken to refer to the monetary offerings made by the congregants or the presentation of bread and wine. Yet there is a problem with either of these instances. In the first, many parishes now encourage those few members who do bring tithes to do so electronically by direct debit in order to ease the tasks of bookkeeping and administration. The offering plate passes along empty while banks facilitate an electronic transfer of digitally recorded currency at a precise and regular interval. Practised in this way, the “bringing” of money seems to widen the distance in the liturgy between what is spoken and what is happening materially. Can one really be said to “bring” such a thing? One problem raised by contemporary economists, particularly those following the economic historian Karl Polanyi, relates to the way in which the monetization of value and wealth serve to cut human transactions loose from material or bioregional contexts in which they might otherwise be embedded. Further, such a mode of bringing (i.e., the electronic transaction) involves so little phenomenally perceptible personal investment, that it stretches the limits of the meaning of the word “gift.” One might say that they have brought some things, or some money, but certainly not a gift. In the latter case, where “gifts” might be taken as a reference to bread and wine, the experience stretches reality still further. Except in rare circumstances, no one will have brought bread or wine which they themselves have made, and even if a parish might be so lucky as to have a dedicated baker and vintner, it is unlikely (indeed almost ecologically impossible in the case of grapes) that these people would have grown the grain or grapes themselves. This incongruity between the language of “gift” and the things being presented is exasperbated with the intensified material sensibility carried by the 1975 and 2000 Roman Catholic liturgies and the Anglican Common Worship (which follows the former closely on offertory language). At the presentation of the gifts, the priest says, “Through your goodness we have this bread to offer, which earth has

---

3 In the Anglican rite (2000), the “Prayers at the Preparation of the Table” are a mixture of references to eucharistic elements (prayers 4-7; some of which make explicit reference to “good” agriculture) and monetary offerings (prayers 2-3). Invitation to communion includes the blessing of the elements with, “God’s holy gifts for God’s holy people.” The 1669 Book of Common Prayer offertory and preparation have little verbal acknowledgement of the bread and wine, a number of biblical texts are recited while a basin is passed and then the priest says, “We humbly beseech thee most mercifully to accept our alms and oblations”
given and human hands have made. It will become for us the bread of life…. Through your goodness we have this wine to offer, fruit of the vine and work of human hands. It will become our spiritual drink.” Yet, once one becomes acquainted with the practices by which the bread and wine have been manufactured, it may be more difficult to proclaim them “good.” As Michael Northcott notes, the modern loaf of bread stands as a profound example of “industrial food’s fossil-fuel dependence” because it is enmeshed in a system of production that produces massive pollution and waste and expends an extraordinary amount of fossil fuels. Extending this critique, in his work-manifesto Shaping Things, Bruce Sterling notes how the modern bottle of wine has been technologically rendered such that it is a “gizmo”:

Socrates (who was a Hunter-Farmer from a world of Artifacts) was drinking local wine from a Greek vineyard in a handmade clay krater…. I am drinking from a machine-labeled, mass-produced bottle of industrial glass, with a barcode and legalistic health warnings, which exists in many hundreds of identical copies, and was shipped from Italy to California and offered for sale in a vast supermarket. And yes, this bottle of wine has a Webpage. The collusion of these two once-basic foodstuffs in industrial and technological forms of making can hardly be overstated. Yet, contemporary liturgical practice carries little formal recognition of the quandaries that they participate in. It is difficult to know whether “the good of all his Church” is served by the processes by which wine and bread are now made.

A final possibility is that the gift which has been brought is the body of those worshipping: congregants bring their bodies and make a spiritual sacrifice following the pattern of Christ’s self-sacrifice on behalf of the whole creation. The Scottish prayerbook to which I referred at the outset actually suggests this very scenario explicitly in some of the Eucharistic prayers (I and V), including the corporate statement, “we bring ourselves.” In contrast to those options which I have outlined

4 The Anglican rite (2000) has a very similar phrasing: “Blessed are you, Lord God of all creation: through your goodness we have this bread to set before you, which earth has given and human hands have made. It will become for us the bread of life.” The 2010 Roman Catholic Rite has been modified slightly from “we have received the bread we offer you: fruit of the earth and work of human hands, it will become for us the bread of life.”

5 Northcott, Moral Climate: The Ethics of Global Warming, 245-46.

7 The same meaning comes through in the Roman rite. Benedict XVI emphasises this point in Sacramentum Caritatis: “This humble and simple gesture is actually very significant: in the bread and wine that we bring to the altar, all creation is taken up by Christ the Redeemer to be transformed and presented to the Father.” (47, 2007)
above, this final suggestion seems at least plausible in the midst of contemporary practice, as the worshopper has perhaps greater hold over the collusion of their own bodies in acts of pollution and extrication. Yet I have saved this most obvious possibility for last as, seen in light of these other denied possibilities of meaning, the affirmation of an exclusively spiritual offering relies upon a troubling dichotomisation of personal and material investment in the liturgy and a sad reduction of the liturgy to a mere monetary collection. In contrast, as I will go on to argue in this chapter, Christian Scripture narrates a dynamic complex of offertory liturgies. In the chapters that follow, I will revisit the themes I have developed in the previous chapters in terms of the practices of the church. The question which hovers over this study regards the way in which the work of the people is drawn in by their worship and given moral coherence and as I will argue, Scripture provides a narrative of a rich tradition which is taken up in creative and compelling ways by the early Christian church.

Yet before I begin the task of close study of offertory instructions in the Hebrew Scriptures, one may ask why this Jewish account of offertory has not had a more substantial influence on contemporary worship practice. In seeking to explain the possible cause of this dramatic attenuation of ‘Jewish’ offertory towards the more materially thin practices in contemporary worship and theology, a number of contemporary scholars, including John Milbank, argue that the continued influence of modern structuralist models of sacrifice have had a narrowing influence on the modern study of religion and biblical critical study. Along these lines, Detienne and Vernant offer a forceful critique of the naive structuralism driving contemporary models of ‘sacrifice’:

Today… it seems important to say that the notion of sacrifice is indeed a category of the thought of yesterday, conceived of as arbitrarily as totemism—decried earlier by Levi-Strauss—both because it gathers into one artificial type elements taken from here and there in the symbolic fabric of societies and because it reveals the surprising power of annexation that Christianity still subtly exercises on the thought of these historians and sociologists who were convinced they were inventing a new science. As Milbank argues, there are also reasons for theologians—in seeking a way to best

---

8 This has been undertaken, for example, in recent work by Esther Reed. In Reed, *Good Work: Christian Ethics in the Workplace*, Chapter 3, “Resurrection and Liturgical Moral Reasoning,” Reed traces the moral inflection of specific eucharistic acts.

explain the theological coherence of the rituals described in the Hebrew Scriptures—to distance themselves from this popular trope of “sacrifice.” If we dispel the social scientific fog, Milbank suggests, sacrifice no longer seems the most fitting metaphor to describe what one finds in a specific reading of Christian Scripture. Instead, the structural accounts offered by sacrifice theorists such as René Girard and Georges Bataille abandon the “radical specificity of a Jewish/Christian construal of sacrifice.”

Milbank enumerates seven different ways in which these accounts are disharmonious with a Hebrew or Christian one:

First of all, there is the attempt to posit a decisive emergence of religion from a pre religious and yet human past; second is the idea of an ambiguous character of ‘the sacred’ prior to and independent of divinity; third, the notion of a univocal ‘essence’ of all sacrifice; fourth, the idea that sacrifice precedes religion rather than being inscribed within it; fifth, the claim that animal sacrifice substitutes for human; sixth, the idea that sacrifice is a perfectly rational although inadequate response to a pre-religious predicament. Finally, there is, even in Girard, a certain reworking of the idea that the true ‘end’ of sacrifice (both termination and conclusion) is pure individual self renunciation…. Shadows of fetishistic worship, of the brutally given, and of Hubert and Mauss’s brahmanic colouring of Christology still hover over this post-sacrificial scene.

At their core, Milbank argues, these accounts of sacrifice convey an ironically limited asceticism rather than “a genuine religious sacrifice of everything for the sake of its return (repetition, mimesis) as same but different.” In response, Milbank argues that a more appropriate conceptual frame for this discussion is that of gift. In my exegesis below, I will follow this helpful re-focusing around “gift,” though I will make use of the term “offering” in seeking a way out of the modern Marcionism that too often pits Old Testament “sacrifice” against NT “freedom”. Instead, what I argue for in this chapter is a reading of the offerings detailed in the first three chapters of Leviticus which are theologically generative and harmonious with the rest of the Scripture. I will commend Levitical descriptions of offering as a system which can nurture a more comprehensive notion of offertory and in turn sustain a more robust

---

11 Ibid., 40-41.

liturgical politics.

Having noted my suspicion of modern positivism, there is a second and perhaps deeper problem to be addressed here. This is, as I have already noted at the outset, the disassociation of sign from reality, or—to borrow a title from John Milbank—a liturgical “Theology without substance.” In one account, media theorist Jean Baudrillard, argues that communication which lives on in spite of being severed from its material referent is not merely benignly confusing but profoundly destructive. In The Mirror of Production, Baudrillard argues that signs, detached from any real material referent, may take on their own political economy wherein this “age of signs” resembles the monetised abstraction which is a consequence of capitalism. In introducing the content of this chapter, I want to ask whether contemporary offertory liturgies exist in a similar “age of signs,” such that they collude with contemporary capitalist narratives. It may be that contemporary offertory and tithing practice is so theologically thin that the practice reifies the contemporary denial of the non-human material world which goes on outside cathedrals and churches by abstracting value, meaning, and agency from its embedding in the world. In this case, tithing in its present form is not Christian, but rather has assimilated the logic and practices of the competing liturgy of market capitalism. What little vestiges might have remained of ancient practices in tithing have been traded for an invisible transaction with no material content or referent. A closer look at the theological descriptions of offerings in Hebrew and Christian scripture shall offer a theologically thick affirmation of good work and true value in the material order.

I do not think that the moral account of work which I have elucidated in the chapters above can function in a free-standing way. As I have already hinted above, Christian Scripture seems to command an account of “holy work” which is mediated through theologically peculiar and ecclesially structured worship. It is my contention that the most morally robust appreciation of the holiness of things and the work which produces them is enabled not (at least primarily) by an unmediated personal contemplation of beauty or the goodness of “ideas in things” (to quote American poet William Carlos Williams) but rather by their entanglement in a very concrete act of

worship. This entanglement of the ordinary in the exceptional moments and acts of worship grants one’s apprehension a particular moral shape and a template which affords moral coherence to work within this activity of worship. If this is the case, then the theological robustness of worship practice is an essential component of the maintenance of a coherent Christian ethic. With this in mind, I turn in part two of this dissertation to a discussion of “moral maintenance.”

Before I proceed, however, some comments are in order regarding the way in which I intend to construe the relationship between worship practice and Christian Scripture. After all, a problem faces any scholar who hopes to find an uninterrupted narrative of practice in Christian Scripture, since in contrast to the richly detailed liturgies presented in the Hebrew Scriptures the NT references to practices are terse, lacking the same detailed level of ritual instruction. This problem was highlighted with a particular intensity when early Protestant scholastic theologians attempted to constrain worship practice to explicit biblical instruction, a practice which was formalised as the so-called “regulative principle.” Yet, centuries after the altars had been “stripped” (to quote Eamon Duffy’s famous study of Protestant iconoclasm), the regulative principle shows signs of abandonment by all but the most determined Protestant theologians. I would argue that what is called for is a more dynamic account of the relationship between worship and the reading of Scripture than a reductive expression such as the “regulative principle.” One such dynamic attempt has been offered in Bernd Wannenwetsch’s account of Political Worship where he suggests that, “canon is to worship as a grammar is to a form of life. In both cases the telos of the first is at home in the second.” In his account, the moral life emerges out of an “interaction” between the two: “ethics has its foundation neither in worship nor in the canon, but it begins in the relation between canon and worship perceived in the interaction of the two: in political worship.” In Part One of this dissertation, I have illuminated the telos that Christian Scripture narrates for moral work. It remains now to demonstrate how this telos is taken up in Christian worship. To this end, I will seek to account for some of the interaction that has occurred between Scripture and practice in the history of the Church. Against the tragically limited expression that one finds in contemporary tithes and offerings, both Christian Scripture and the

---

16 Wannenwetsch, Political Worship: Ethics for Christian Citizens, 35.

17 Ibid., 36.
Tradition of the Church offer a rich tapestry in which work is woven into worship in specific ways. In the three chapters that follow, I will explore how Christian Scripture preserves a rich account of offertory practice and how those various strands have been taken up in Christian worship over the ages. Keeping in mind that the living tradition of Christian worship carries the same precious fragility as the craft wisdom that Bernard Leach worried over, I offer these examples as a limited exhibition of possibilities through which contemporary Christians may begin the work of drawing work back into worship, mending this moral tapestry.

I will take up the three offerings described in Leviticus 1-3 as a trope to organise my analysis of offertory practice narrated in Christian Scripture. My study will not be limited to analysis of these three chapters of Leviticus and I do not mean to falsely reify the offertory categories described there. Instead, as this survey will reveal, the various offerings described in the Hebrew bible overlap and combine in a diverse variety of ways. I will rely upon the description of the three offerings described there, specifically the “burnt offering,” the “cereal offering” and the “peace offering,” as a trope which may draw out more specific details which emerge from the dynamic which I am arguing for here in which work is “drawn into” worship. Thus these three offerings each prove suggestive in a different way for contemporary offertory practice. The burnt offering draws in work and relativises its economic measurement (or productivity); the firstfruits offering (a specific example of the cereal offering which I will highlight) provides a way of affirming excellence and quality in drawing in a specific portion of the work of the people; and finally, the peace offering draws the work of the people into an unavoidably social and festal context. All three offerings also highlight the various aspects of “good work” which I have developed above, including agency, sociality, and wisdom and I will engage with NT texts and practices in the pre-modern church which resonate with this liturgical “drawing in” of the work of Israel, finding resonance between Hebrew Scripture and Christian practice. What this investigation reveals, I hope, is that taken as a whole one finds a form of worship expressed (or in some cases prepared for) in Christian Scripture that can challenge the pragmatism of contemporary offertory practice and which can in turn offer a theologically rich mechanism for the implication of the work of the people of God in their worship.
1. Setting the Stage: Offerings in Christian Scripture

It is important to begin with the observation that the formal expressions of offerings that one finds in Leviticus and later in the Hebrew Scriptures are preceded by a rich (though less formal) narrative of offertory practice. The first account of human offering to God appears in Gen 4:4, where “Cain brought some of the produce of the soil as an offering for Yahweh, while Abel brought the first-born [בכרות / bKrwt] and fattest of his flock.” Interpreters are divided in trying to parse out how to read the action in the text subsequent to the two offerings. The Hebrew text of Gen 4:4-5 is terse, with a literal rendering being something like the following: “YHWH had regard towards [ישע / yš’] Abel and his offering, and did not have regard towards Cain and his offering.” There is no direct indication in the text as to why regard is offered and this opaque beginning provides an important cue for reading later accounts of offerings in Christian Scripture. Von Rad and Westermann suggest that this text is the first in a line of many that demonstrate how “God’s motives are inscrutable.” However, Wenham suggests that one should be cautious about rendering God’s activity opaque in an absolute way, “this type of explanation should only be resorted to if the text gives no other motives for divine action.” Other more theologically motivated interpreters follow the lead of the Epistle to the Heb 11:4,

---

2 Ibid., 104.
which locates God’s response in God’s assessment of Cain and Abel’s inner motives, judging the latter to have “by faith offered to God a more acceptable sacrifice than Cain’s.” A third possible reading draws attention to the notable textual difference between the two offerings: the emphasis on Abel’s bringing the first and fattest. Most interpreters agree that God’s dissatisfaction does not stem from a preference for horticulture, but rather because he demands proper deference which is satisfied by Abel’s bringing the first and best. The impact of this is doubled by the irony (represented by chiasm in the text) that Eve’s firstborn does not bring his first-fruits. Given this diversity of readings, it is fair to say that this interpretive ambiguity is not one which can be easily settled here. With this in mind, I would suggest that these need not be mutually exclusive options. Genesis highlights several features which are intrinsic to the dynamic of human offerings: the response of God, the notion of faith, and some attention to the material significance of an offering. This first account of offerings also serves to highlight the way in which offertory themes overlap, as I shall note below at greater length.

It is important to note that intertextual study on the topic of sacrifice is made more complex by the way the varied and technical Hebrew vocabulary of sacrifice is rendered generically in Greek, with fewer terms, which results in a blurring of categories in contrast to the varied technical vocabulary used in Hebrew description. While the details in the Hebrew Scriptures involve an extensive vocabulary of terms and more discrete (though overlapping) categories, the LXX and NT often refer merely to προσφορά [prophora =“offerings”] or θυσία [thysia =“sacrifice”]. This is also the case where, as I shall note below, the various Hebrew terms for firstfruits offerings are flattened under a single Greek term ἄπαρχη [aparche]. Yet, it would also be a mistake to assume that the presence of specific instructions and named offerings in the Hebrew Scriptures indicate that the various genres of offerings are discrete in an absolute sense. As I shall go on to suggest, the attributes of Hebrew categories such as “burnt offering,” “tithes,” “firstfruits,” and “eaten offerings” overlap and blend together, leaving it difficult to set a strict typology. Also of preliminary interest is the genre of Leviticus. As I have suggested above in the case of the Tabernacle, a closer look at the first several chapters of Leviticus forces one to

---

3 NRSV.
4 Ibid., 103.
5 This is also the case with economic terms, such that the LXX and GNT use dōron to render a variety of Hebrew terms
reconsider the nature of the text. Though it seems to be a stripped-down version of instructions for Israelite ritual, in fact a number of crucial details are missing were this intended to be used for reconstruction.  

Also of interest is the accreting nature of details provided in the text. Leviticus I provides a terse account of the burnt offering, but procedural details pertinent to this ritual are added at various points in the first several chapters (take for example, the description of priestly procedure in Lev 6 and of the prebend in Lev 7). This is not, in my reading, a matter of disagreement, but rather of a text in which the author has chosen to allow details to accumulate along the way. One reaches the fullest understanding of the ritual details only after reading the entire Pentateuch, and this drives the intertextual approach I take in this chapter to offertory ritual. Keeping this in mind, I will hold to ritual categories lightly, placing emphasis on the overall tradition-complex of offerings and I will seek to abstract the attributes of rightly practiced offerings from the Pentateuch, whilst maintaining a sense of the narrative place of these offerings.

The description of offerings in Genesis and Exodus are terse, with oblique references without procedural detail to “burnt offerings,” “peace offerings,” and the very terse instructions regarding “hewn stones,” and “steps.” One must turn to Leviticus for fuller explication of the practice of worship. While this study will not focus exclusively on Leviticus—indeed in examining the various iterations of offerings below I will range both canonically backwards and forwards—I rest upon the categories which Leviticus initiates to frame my presentation. Specifically, I will make use of those offerings presented in the first three chapters of Leviticus which are not exclusively expiatory. Here one finds several different forms of offering outlined in which each has a separate (though often overlapping and repeated) set of instructions and at least partially unique purposes. These are, as Milgrom translates them, (1) the עלת [לh =“burnt” or “whole offering”] (2) the מנהה [mnhḥ =“cereal offering”] and (3) the מנהה שלם [zhḥ ṣlmym =“well-being offering(s)”). In explaining my emphasis on the non-expiatory offertory liturgies, I should also note that contemporary research by Christian theologians drawing upon Leviticus has tended to focus primarily upon the expiatory aspect of the cultus described in Leviticus.

Writing in the NT and contemporary systematic descriptions of atonement theory

---

7 While I will not do this here, one could also choose to organise this type of presentation based on the slightly different (but complementary) categories in Deut 12:6.
have, in particular, provided a narrow filter for those seeking to explore the
theological meaning of Leviticus. In a similar way, research in Temple theology has
tended to focus on the “Holy of Holies” to the exclusion of the outer court.\(^8\) I do not
mean to deny the important and substantial place atonement related metaphors and
texts in the Hebrew Scriptures carry, instead I hope to expand the current picture to
include some further details which have been unnoticed amidst this theological focus
which carry substantial promise for reinvigorating Christian worship. Similarly, I do
not mean to deny the phenomenal significance of those rituals which took place with
respect to the holy of holies, but again, I mean to draw attention to the implications
for the moral life of Israel of the considerably more regular activity which took place
in the court outside. As I have suggested with the Tabernacle text in Exodus analysed
above, the offertory rituals in Leviticus present another text of the bible which has
been significantly neglected by modern biblical scholarship. This bears out in moral
use of the bible as Christian ethicists only occasionally refer to Lev 19 or 22.\(^9\) No
contemporary study on work in biblical ethics (or indeed, perhaps, within the whole
genre of biblical ethics) offers a substantial treatment of the material presented in the
first half of Leviticus. This neglect of the start of Leviticus is lamentable, as like
overly-enthusiastic readers of a novel skipping to the final chapter, contemporary
readers seek to understand only the material which comes at the latter portion of the
book. Keeping this in mind, I proceed with the more specific details of this
investigation, seeking to recover something of the political and economic
significance of the patterns of worship expressed in offertory rituals as they have
been appropriated in both Hebrew and Christian practice.

2. לֵוֶל: A Social Offering

Burnt offerings provide a fitting place to start this inquiry, in part because
they are the first to be presented in the offertory instructions in Leviticus. The לֵוֶל
\([lh]\) is introduced in Lev 1:3 and is, as Hartley suggests, “the main sacrifice of the
Israelite cult.”\(^10\) In attesting to this primacy, Milgrom suggests “The fact that the

---

\(^8\) One example of this is the insightful study by Greg Beale, who nevertheless presents a thesis
where “the Old Testament Tabernacle and Temples were symbolically designed to point to the cosmic
eschatological reality that God’s tabernacling presence, formerly limited to the holy of holies, was to
be extended throughout the whole earth.” *The Temple and the Church’s Mission: A Biblical Theology
of the Dwelling Place of God,* 25.

\(^9\) Cf. Witherington, *Work: A Kingdom Perspective on Labor,* 93; Reed, *Good Work: Christian
Ethics in the Workplace,* 12, 16, 47, 65, 107.

burnt offering answers every conceivable emotional and psychological need leads to the inference that it may originally have been the only sacrifice offered except šēlāmin, which provided meat for the table.”

It is also important to note that by the time the reader arrives at Lev 1, burnt offerings have already been described variously including formal practice at solitary altars, as Averbeck notes, “long after the Tabernacle (and even the Temple) had been built, whether approved (e.g., Judg 6:26; 1 Sam 7:9-10, 17; 2 Sam 24:22-25; 1 Kgs 18:38-39; with peace offerings, Josh 8:31 [cf. Exod 20:24; Deut 27:5-7]; Judg 21:3-4, etc.) or unapproved (e.g., Judg 11:31; 1 Sam 13:8-14; 1 Kgs 18:25-29).” One also finds surprising references to the reinstitution of burnt offerings, as in Ps 51. Here the Psalmist opens in a way that seems to dismiss sacrifice, “O LORD, open my lips, and let my mouth declare Your praise. You do not want me to bring sacrifices; You do not desire burnt offerings; True sacrifice to God is a contrite spirit; God, You will not despise a contrite and crushed heart” (Ps 51:17–19 JPS). Yet the verses which follow do not continue the repudiation of burnt offerings, but rather imagine its reinstitution as a worship practice in more righteous times: “May it please You to make Zion prosper; rebuild the walls of Jerusalem. Then You will want sacrifices offered in righteousness, burnt and whole offerings; then bulls will be offered on Your altar” (Ps 51:20–21 JPS). As I shall go on to suggest further below, burnt offerings also persist in Christian practice, though with some reconceptualisation.

In accounting for the ethical implications of this ritual, one must first contend with the influence on modern exegetes of the Romantic conception of the heroic individual who faces his sin before God with an expiatory offering. Such a reconsideration is commended in the first case because a close reading of Leviticus reveals that the function of the burnt offering is not strictly expiatory. This claim requires some nuance and justification, as Lev 1:4 does suggest, “He shall lay his hand upon the head of the burnt offering, that it may be acceptable in his behalf, in expiation for him” (Lev 1:4 JPS). Milgrom is helpful here, as he notes—after an extensive survey of the explanations accompanying expiatory burnt offerings in other ANE ritual systems, Rabbinic literature, and other liturgical systems in the Hebrew Bible—that the primary purpose of the burnt offering is explained most clearly in 1 Sam 13:12 as entreaty:

---

12 "ר"פ", NIDOTTE, Averbeck, 3:406.
But entreaty covers a wide range of motives: homage, thanksgiving, appeasement, expiation (Thompson 1963). Appeasement was certainly the goal of Samuel’s sacrifice at Mizpah, for the text dutifully records, “And the Lord answered him” (1 Sam 7:9); whereas Israel’s entreaties during Jeremiah’s time were rejected: “When they sacrifice burnt offering and cereal offering, I will not accept them” (Jer 14:12). Other examples are as follows: David offers up anʿōlâ to stop the plague (2 Sam 24:21–25); the Israelites offer up anʿōlâ after their defeat at the hands of Benjamin at the end of a day-long fast (Judg 20:26). “The Tanna, R. Simeon, asks: why does the purification offering precede the burnt offering (in the sacrificial order)? It is comparable to an attorney who comes to appease. Having made his (plea of) appeasement, the gift (of appeasement) follows” (t. Para 1:1; b. Zebah. 7b [Bar.]). The burnt offering then is a gift, with any number of goals in mind, one of which—the one singled out in this chapter—is expiation.13

Keeping this in mind, one can outline the logic of the expiatory aspect of the burnt offering in the following way: it is expiatory because expiation functions as a subset of a broader dynamic. The expiatory function of this offering exists inasmuch as the ṣelim functions as part of a holistic ritual system wherein ritual acts are rarely discrete, instead they often overlap and exist in composite expression.14 As Gordon Wenham suggests, “the burnt offering does not remove sin or change man’s sinful nature, but it makes fellowship between sinful man and a holy God possible.”15 This suggestion is affirmed when we look outside the spare prose of Leviticus and note, as Milgrom does, “when the cultic texts (outside of P) actually specify a motive for the burnt offering, it is an occasion of joy, such as the fulfilment of a vow or a freewill offering (22:17–19; Num 15:3).”16

In contrast, in an influential reading by Wellhausen, the so-called “Priestly” texts (such as Lev 1) are read as purely expiatory and this underwrites a dichotomy between the rituals described in P and the more “dynamic” and primitive festival practices in non-Priestly sources. As Knohl argues, in Wellhausen’s prolegomena, “The Priestly Code… is a ‘late’ development that has lost this natural and agricultural character and replaced it with detailed specific ritual prescriptions of public sacrifices that were to be offered at fixed times during the year. The awareness of nature was exchanged for historical discussions that explained the festivals as

13 Ibid., 175-76.

16 Milgrom, Leviticus 1-16, 175.
reflecting events of national history.”17 Though Knohl does not suggest this, it is clear from his distillation that Wellhausen’s interpretive matrix has been set by the agenda of late-modern German Romanticism where the institutional expression of worship is juxtaposed against spontaneous (and free or “liberal”) expression.18 Aside from offering a radically anti-canonical approach to the text of Leviticus, Wellhausen’s approach is unwarranted, as Knohl suggests, based on both archaeological and textual grounds.19 As Milbank notes, the strategy shared by a number of Romantic writers:

was to link sacrifice with the universal spontaneity of feeling, not reason, and to assert the ‘naturalness’ for primitive peoples, of a notion of ‘giving’ to the gods, or even of sharing a meal with them… Both aspects are stressed by Wellhausen as representing the primitive character of sacrifice, which he associates with a time of closeness to nature, spontaneous joy, individual freedom from political rule and diversity of freely chosen sacred sites.20

This is not neutral “scientific” analysis, as there are modern political presuppositions which infuse this “interpretation” of sacrifice:

For Wellhausen the more dreadful sacrificial edifice is raised strictly upon the basis of the centralizing state which ruptured the Rousseauian idyll by regulating an oral anarchy of practice, including sacrificial practice, with written laws. The same new focus reinscribed cyclical nature festivals upon historical linearity with its sense of purpose and expectations and supremely prevented cultic irregularity and idolatry by restricting all sacrificial practice to the Temple in Jerusalem. As a consequence, Israelite cooking and feasting was secularized, therefore joy itself was secularized, and religion henceforth became something separate, serious and in excess of cyclic completion.21

I have already noted above the consequences that these projections of “nature” and

---

18 To this effect, see Wellhausen, Prolegomena 11.2.2.

19 Knohl, 40.

“freedom” carry for an ethics of work, particularly in undermining the basis for human action which engages with the natural world. At this juncture, I note also the ways in which the anti-institutional Romantic construals of apolitical moral agency may estrange ritual practice from its social setting.\textsuperscript{22} By resisting this reductive approach, it becomes possible to to expand one’s conception of biblical sacrifice and the dynamic represented in Leviticus and allow the text to provide its own conception of liturgical sociality.\textsuperscript{23}

A close look at the dynamics of the burnt offering also reveal that this broader psychological spectrum is matched by a more complexly interrelated social dynamic than Wellhausen and his intellectual progeny have expected from these texts. It may help to begin by sketching out the basic procedural details described in Lev 1 regarding the burnt offering. The description of the ceremony, which was likely practiced on a daily basis, begins with Lev 1:3, where one reads that the offerer is meant to bring a male animal without blemish [זַרְעָן תְּמִים / zkr tynm]. The animal is to be brought before the entrance of the Tent of Meeting, in the courtyard of the Tabernacle complex (1:4) where, in cooperation with the sons of Aaron, the animal is slaughtered. Milgrom provides a helpful summary of the procedure:

After the offerer has performed the hand-leaning rite and slaughtered his animal, the officiating priest dashes the animal’s blood—collected by his fellow priest(s)—upon all the sides of the altar, while the offerer skins and quarters the animal and washes its entrails and skins. Once the priests have stoked the altar fire, laid new wood upon it, and then laid the animal parts, the officiating priest supervises the incineration of the sacrifice.\textsuperscript{24}

I think Milgrom is right to suggest, “behind the seemingly arcane rituals lies a system of meaning that we can draw into our own modern lives.”\textsuperscript{25} I will take up this assertion later in this chapter. In preparing the way for a consideration of the modern

\textsuperscript{22} See above, p. 16 and 31.

\textsuperscript{23} It bears mention that a number of modern biblical scholars have also argued, from a similar basis, that Israelite rituals were not constructed for faith in YHWH, but rather in a struggle to resist other ANE ritual systems. See, for example, Gerhard von Rad, \textit{Old Testament Theology}, I, 1962, 252. While I do not think this needs to be a zero-sum argument, i.e., that Israel’s cultus is wholly original, one need not assume that Hebrew worship was merely a passive receptacle for other ANE ritual. It is hard to decisively refute a reconstruction, but what we have in Leviticus, it seems to me, is far too robust and interesting for this to be the case. That the cultus lacks straight-forward “rationalistically” conceived coherence, seems grounds for a critique of Enlightenment bias in biblical-critical scholarship rather than dismissal of their content. For more along these lines, see Colin Brown, \textit{NIDNTT}, 3:418ff.

\textsuperscript{25} Ibid., 18.
implications of this ritual practice, I turn to synthetic analysis of several specific details of the ceremony.

First, it is important to note the personnel involved. This is not priestly action which excludes the worshipper, but a ritual drama which is performed together by celebrant and officiant, and one which emphasises the relationship between these two persons and the animal involved as well. This is a socially inclusive act which rather than merely commodify the animal involved, emphasises the relation between all three persons.\(^\text{28}\) Wenham puts this in particularly vivid (if slightly conjectural) terms:

The ancient worshipper did not just listen to the minister and sing a few hymns. He was actively involved in the worship. He had to choose an unblemished animal from his own flock, bring it to the sanctuary, kill it and dismember it with his own hands, then watch it go up in smoke before his very eyes. He was convinced that something very significant was achieved through these acts and knew that his relationship with God was profoundly affected by this sacrifice.\(^\text{27}\)

In addition to the personal participation of the worshipper, the liturgy as described in Leviticus is deliberately told from both the perspective of the worshipper (1:1-17) and the priest (6:8-13). Further, the actual choreography emphasises this closeness. This is the case with the instruction in verse 4 that “He shall lean his hand [סָמַך / \(\text{smk ydecc}a\)] upon the head of the burnt offering.” As Milgrom notes, “sâmak implies pressure.”\(^\text{28}\) Just as the selection process connotes intimate relationship (as the animal is drawn from one’s own flock), so too the ritual itself emphasises the shared space between the worshipper and the sacrificial animal being offered. This intimacy is underlined by the act of prayer which is implied with the laying on of hands. As Wenham suggests, “it was at this point that the worshipper said his prayer. The laying on of hands is associated with praying in Lev. 16:21 (cf. Deut. 21:6–9) as well as in later Jewish tradition.”\(^\text{29}\) This liturgical practice is preserved in the Psalter where a number of Psalms set their prayers in relation to the burnt offering.\(^\text{30}\)

\(^{26}\) This ecological reading of Leviticus is developed at length in Jonathan D. Morgan, “Land, Rest & Sacrifice: Ecological Reflections on the Book of Leviticus” (PhD Diss., Exeter University, 2010).

3. More than Money

In addition to functioning in a robustly social way, there are important ethical implications of the fact that the offering is “incinerated”. This is a straightforward translation of the Hebrew verb קטר [qrt], which in the hifil suggests, “make go up in smoke” inasmuch as this verb refers to ritual incineration. The scope of incineration is emphasised in verse 9 with ל כל [l = “all of it”]. As Milgrom notes, “The unique distinction of the burnt offering in the sacrificial system is that all of it, except for the skin, is consumed on the altar.”31 It is worth noting that the writer of Leviticus makes use of a different Hebrew verb to connote non-sacrificial incineration: תשרף [srp].32 The contrast here seems to be that this incineration is not meant to be simply destructive. Instead, with בתשיר [hqtyr] “the offering is not destroyed but transformed, sublimated, etherealized, so that it can ascend in smoke to the heaven above, the dwelling-place of God.”33 This represents what is the most direct material transference of the offering to YHWH at the front end of a series of other offerings which involve different appropriations of economic value. The burnt offering stands in distinct contrast to those later offerings, such as tithes, which are deployed into practical contexts such that the offering served to provide for the sustenance or salaries of priestly personnel and Temple maintenance or to provide for a meal for the worshippers. While I will go on to discuss the second two categories of economic appropriation, it is important to note the relativisation of wealth which occurs with this first and perhaps most frequent of the offerings. Underlining the centrality of this offertory act, Levine suggests that meaning behind the laying of hands was not “the transference of impurity or guilt to the victim” but rather to provide assurance that “sacrifices intended for specific rites would be used solely for that purpose. Once assigned in this way, the offering was sacred and belonged to God.”34 Put another way, “The burnt offering then is a gift, with any number of goals in mind.”35

31 Milgrom, Leviticus 1-16, 161. This act of complete incineration is also emphasised in the priestly instructions later in lev. 6:2: “The burnt offering itself shall remain where it is burned upon the altar all night until morning, while the fire on the altar is kept going on it.” (JPS). Lev 7:8 describes a priestly prebend of the animal’s hide, which is the one exception to this practice. For more on the meaning of this term see Baruch A Levine, Leviticus, JPS Torah Commentary (Philadelphia: Jewish Publication Society, 1989), 5-6 and Milgrom, Leviticus 1-16, 172ff.

32 Cf. Lev 4:12, 21; 10:16; 16:27-28. See also Num 19:5, 6, 8).

34 Levine, Leviticus, 6.

35 Milgrom, Leviticus 1-16, 176.
Though the burnt offering is not driven by monetary value, this does not prevent the ceremony from including an accommodation of means. There are three different variations provided on this offering, the first a bull (1:3-9), the second a male sheep or goat (1:10-13) and third, a turtledove or pigeon (1:14-17). While the ritual procedure for all three is relatively similar, the obvious difference is the contrast in the value of offerings. Milgrom draws on Rabbinical sources in seeking to understand the purpose behind this three-tiered ritual procedure, particularly Midr. Lev. Rab. 3:5. The Midrash bears repeating:

King Agrippa [probably Agrippa I, 41–44 c.e.] wished to offer up a thousand burnt offerings in one day. He sent to tell the high priest, “Let no man other than myself offer sacrifices today!” There came a poor man with two turtledoves in his hand, and he said to the high priest, “Sacrifice these.” Said he: “The king commanded me, saying, ‘Let no man other than myself offer sacrifices this day.’ ” Said he: “My Lord the high priest, I catch four [doves] every day: two I offer up, and with the other two I sustain myself. If you do not offer them up, you cut off my means of sustenance.” The priest took them and offered them up. In a dream it was revealed to Agrippa: “The sacrifice of a poor man preceded yours.” So he went to the high priest saying: “Did I not command you thus: ‘Let no one but me offer sacrifices this day’?” Said [the high priest] to him: “Your Majesty, a poor man came with two turtledoves in his hand, and said to me: ‘I catch four birds every day; I sacrifice two, and from the other two I support myself. If you will not offer them up you will cut off my means of sustenance.’ Should I not have offered them up?” Said [King Agrippa] to him: “You were right in doing as you did.”

Particularly given the regular occasion for burnt offerings, the purpose of this tiering (as this parable suggests) is to provide different modes of this offering which are economically accessible to those of less means. Keil and Delitzsch corroborate this suggestion: “There are also turtle-doves and wild pigeons in Palestine in such abundance, that they could easily furnish the ordinary animal food of the poorer classes, and serve as sacrifices in the place of the larger animals.”37 This attempt to make the ritual participation accessible to people of all economic strata also carries forward into other rituals described later in Leviticus.38 Taken in combination with my suggestion that this offering marks an incineration of wealth, like the tithe, this is

---

38 Milgrom notes a similar “explicit purpose of special allowances for birds in other sacrifices: the scaled purification offering (5:7-10) and the offerings of the parturient (12:8) and the healed mēšōrā (14:21-22). The same motivation applies to the cereal offering (chap. 2; cf. esp. 5:11-13)” Milgrom, Leviticus 1-16, 167.
meant to be a scaled offering which relativises personal wealth. It would be shameful for a rich man to bring a bird, whereas it would also be unnecessary for a poor man to bring a goat. The effect is a levelling of the economic impact for those whose work provides extravagant or modest means. The rhythm of this offering does not make for a grand periodic act, but rather a regularly recurring devotion of personal income exclusively to YHWH. Thus Samuel, as described in 1 Sam 7:9, brings a lamb and not a bull.

The contemporary reader can only imagine the psychological experience of specific participants, but a modern experience of the burnt offering would not likely be categorically different with regards to the economic and work implications of this rite. A reconstruction of the rite might go as follows: Depending on their ability, some spontaneous occurrence prompted the worshipper to bring an offering to the outer court where the altar fires were kept continually burning to meet the needs of occasion. Along with the priest, they would have helped to hold and butcher the sacrifice (and in the case of a bull, likely with the help of others given the weight of the carcass), they would have watched the life-blood—God’s absolute possession—be drained from the animal and scattered. Then, they would have watched as the offering was incinerated, with choice (and expensive) cuts of meat being burned down to ashes, consumed by no person. In some cases, though definitely not all, this animal would have represented a prolonged investment of time and nurture, and in the case of the first two categories, a choice unblemished male animal. This represented a significant expense, publicly offered, for no purpose other than to offer praise and entreaty to YHWH.

4. Burnt Offerings in New Testament Perspective

As I have suggested in the previous chapter, I am strongly against a supercessionist reading of these liturgical texts and the dismissal of their moral vision which follows from such an approach. The attentive reader will find that the relativisation of sacrifice as “spiritual” in the NT parallels the reforms already prescribed in the exilic and post-exilic literature in the Hebrew Bible. Further, these reforms are not a straight-forward dismissal or condemnation of sacrificial practice. Instead, as Jacob Milgrom notes:

The thesis that the preexilic prophets repudiated the cult, espoused by the previous generation… has been unanimously and convincingly rejected by its

39 See Wenham, NICOT 3, 54.
successor…. The latter have conclusively demonstrated that the prophets did not object to the cult per se but only to its abuse: those who leaned their hand on their sacrificial animals or raised their hands in prayer had blood on their hands (cf. Isa 1:15). To the contrary, the prophets uniformly affirmed the indispensability of the Temple… they only remonstrated against the blind belief in its efficacy without affecting the moral behavior of its adherents (forcefully: Jer 7:1–15; 26:1–15).

The point here is that right sacrifice cements reconciliation between God and humans and one finds this logic consistently portrayed across the Prophetic literature. Keeping this more nuanced portrait of HB prophetic critique of sacrificial practice in mind, it becomes clear that NT critique of Hebrew ritual is also, as Averbeck suggests, “in continuity with the OT prophetic critique of the cult.” The instruction by Jesus in the Sermon on the Mount that one must be reconciled with one’s brother (Matt 5:23–24) before bringing an offering underlines this case. Further, it is interesting to observe that both Jesus and Paul provided burnt offerings (among others) and as practicing Jews they would have had an intimate knowledge of first-century Jewish ritual practice. It is undeniable that a significant procedural transformation occurs in the NT, but adjectives fail us in seeking to provide an exhaustive description of this transformation. It is my argument that the freight of meaning conveyed by the sacrificial system is brought forward metaphorically into human practice but this metaphor is a complex composite which requires careful reading of the Hebrew Scriptures. Any metaphorical appropriation which is not founded upon a thorough understanding of Hebrew worship practice risks incoherence. This reading is supported by several key NT texts which draw upon the Israelite cultus to provide a metaphorical bridge for the content I have developed here into Christian doctrine and practice.

I have already noted at length in the previous chapter how the concept of the Temple is, in the NT, cast in an eschatological light, which in turn provides a crucial part of the NT narration of the shape of the Christian moral life. This appropriation of “Temple” also involves appropriation of the ritual action which goes on at the Temple. There are a number of NT texts which can serve as examples of this

---

40 Milgrom, Leviticus 1-16, 482.
42 Cf. Averbeck, NIDOTTE, 3:1015-16
dynamic. Christians are described in Rom 12:1 as 

θυσίαν ζῶσαν [thysian zosan =“living sacrifice”] (Rom 12:1). In a similar way in Eph 5:1, Paul exhorts the church to “be imitators of God” and in the subsequent verse he makes use of these two sacrificial terms προσφόραν καὶ θυσίαν τῷ θεῷ [prophorán kai thysian to theō =“an offering and sacrifice to God”] and appends to that the modifying phrase εἰς ὧν εὐωδίας [eis ois euōdias =“as a smell of fragrance” or “fragrant burnt offering”]. Here, Paul uses the burnt offering in an explicit way as a metaphor for the “sacrifice” of oneself. Elsewhere the actions of Christians which are said to constitute the offering, as is the case in Phil 4:18 where Paul makes reference to literal (and not “spiritualised”) gift received from Epaphroditus as “ὁσίμην εὐωδίας, θυσίαν δεκτήν, εὐάρεστον τῷ θεῷ [oismen euōdias, thysian dektēn, euareston to theō = “a sacrifice acceptable and pleasing to God”].”

In a similar way, the writer of Hebrews provides an extended account of this spiritual redefinition of sacrifice in chapter 10, and then concludes the letter by saying, “Through him then let us continually offer up a sacrifice of praise to God, that is, the fruit of lips that acknowledge his name. Do not neglect to do good and to share what you have, for such sacrifices are pleasing to God” (Heb 13:15–16 ESV). Finally, one finds in 1 Pet 2:5 perhaps the most explicit layering of temple images to describe the Christian moral life. In this text, the author describes his audience as λίθοι ζώντες [lithoi zōntes =“living stones”] οἰκοδομεῖσθε ὁλοκαυτών [oikodomeisto oikos pneumatikos =“built up as a spiritual house”] ἱεράτευμα ἡγίον [hierateuma hagion =“to be a holy priesthood”] for the purpose of offering πνευματικὰς θυσίας [pneumatikas thysias =“spiritual sacrifices”]. All of these appropriations affirm the ethical dimensions of offerings which I have explicated from the Hebrew Scriptures above: this sacrifice is freely given and serves to emphasise the relatedness of both human creatures and their Creator.

Romans 12 offers several opportunities for closer study as Paul’s use of the participle ζῶσαν [zōsan =“living”] might seem to undermine the suggestion that this is drawn in relation to the burnt offering (which is certainly not living after the ceremony). Further, this is not said to be merely worship, but λογικὴν λατρείαν [logikēn latreian], which a number of contemporary translators render as “spiritual worship.” That Paul is trying to underline a point of departure for Christian worship from the Jewish cultus is unmistakable. However, the precise nature of this difference is somewhat more complex, I think, than many commentators have suggested. As might be expected, this text often serves as a popular location for

44 “a fragrant offering, a sacrifice acceptable and pleasing to God” (ESV).
antinomian speculation. To this end, James Dunn argues, “[Paul] takes up cultic terms in order to redefine them too…. The boundary of cultic ritual is transposed from actual cultic practices to the life of every day and transformed into nonritual expression, into the much more demanding work of human relationships in an everyday world.” While I agree with Dunn’s broader argument that Paul is trying to displace the National aspect of Jewish self-understanding in redefining ritual action, his juxtapositions here are striking: “actual cultic practices” are set in opposition to “the life of everyday” and the “much more demanding work of human relationships.” Dunn goes on to argue:

The emphasis on a spiritual sacrifice was of course not new, but in Paul’s case and that of the early Christian congregations, it was not a matter of “both . . . and” (observe the sacrificial system, but recognize that God wants something more), but rather of encouraging the idea of a different kind of community, marked by self-giving without an accompanying sacrificial cult. At the same time Paul’s insistence that such sacrifice must take concrete bodily expression prevents his thought degenerating into a mere unworldly pietism or enthusiastic dualism.

In contrast to Dunn’s reading, as I will continue to argue in this chapter, the original set of rituals to which Paul is obliquely referring was itself marked by self-giving, infused with hospitality (as I will argue in a later section) and does not neglect human relationship. Rather than argue that Paul’s only options are radical redefinition or “both . . . and” it seems reasonable to modify Dunn’s approach to suggest that Paul’s redefinition draws upon the moral coherence which is already present in Hebrew ritual.

Translation of the term Paul uses to specify the form of worship, λογικὴν [logikën], as “spiritual” may be misleading if one is not aware of the link between spirit and reason in the classical meaning of the term. Λόγος [logos] is popular with Stoic thinkers, as an adjectival form of λόγος, which connotes, “the ordered and teleologically oriented nature of the cosmos.” Λογικὴν implies “rational”, inasmuch as rationality is not mere thought, but a grasping at the intelligibility and coherence of things. Keeping this in mind, a more accurate translation might be “a thoughtful service (in a dedicated spiritual sense).” It cannot be denied that what Paul is

46 Ibid., 717.

47 TDNT 4:85.

48 BDAG, 598.
referring to here is sacrifice which occurs outside the Temple and also excludes the external creature. This is internalised, yet while the person lives on, something is surely relinquished: one’s autonomy and agency are the “burnt offering” here offered in grateful thanksgiving to God. This Christian modification is not unique, as Jewish writers provide a similar modification, which Paul alludes to earlier in Rom 2:29. Literature, such as the Testament of Levi and Philo, offer similar modification “in echo of the prophetic demand of Ps. 51:16.”\(^{49}\) The unique feature of Paul’s approach is not his “spiritualising” but rather his emphasis on the mediation of the moral norms of λογικὴν λατρείαν through the spirit of Jesus Christ.

5. Early Christian Charity as a Burnt Offering

One must be careful in seeking to find direct corollaries to Scriptural prescription in early Christian practices as early Christian literature tends to omit the procedural details or “lived” dimensions of Christian worship. As Margaret Barker relates, a wide array of early Christian writers refer to a “secret tradition” (cf. John 16:12) which, she argues, concerns Christian liturgy.\(^ {50}\) This tradition is noted by Clement, Ignatius, Irenaeus, Origen, and Basil with the latter leaving the intriguing suggestion that there were certain practices “handed down to us in a mystery from the tradition of the apostles” which concerned “liturgical customs, prayers and rites of the sacraments and other Christian universal customs… [and] the theological doctrines implied in the liturgical rites and prayers.”\(^ {51}\) Nonetheless, there are suggestions that the ethical features of burnt offerings which I have highlighted throughout in the study above persisted in Christian worship with very practical effects.

One of the best places to find validation of this claim is in Ancient Church Order documents, which sought to provide a manual of right Christian practice, and this genre of Christian literature is functionally similar to Leviticus. In these documents, one finds that early Christian practice took seriously the transition which had occurred in the meaning of temple which I have explored above such that they thought of themselves following Rom 12, as θυσίαν ζῶσαν [thysian zōsan =“living sacrifice”], or as a δσμὴν εὐωδίας [osmēn euōdias =“fragrant burnt offering”] as Paul

---

\(^ {51}\) Translation from Ibid., 11.
puts it in Eph 5:2. One can find this suggestion in chapter 14 of the Didache, where the author describes Christian worship: “On the Lord’s own day gather together and break bread and give thanks, having first confessed your sins so that your sacrifice may be pure [ἡ δὲ ἱεροσύνη ἤκολον θυσίας ὑμῶν / hopōs kathara ἡ thysia ὑμῶν].” This sacrifice is worked out in very practical, if radical, terms earlier in Didache 4:5-8:

Do not be one who stretches out the hands to receive but withdraws them when it comes to giving. If you earn something by working with your hands, you shall give a ransom for your sins. You shall not hesitate to give, nor shall you grumble when giving, for you will know who is the good paymaster of the reward. You shall not turn away from someone in need, but shall share everything with your brother or sister, and do not claim that anything is your own. For if you are sharers in what is imperishable, how much more so in perishable things!\footnote{Cf. also Didache §13, which I discuss further below. Translation from The Apostolic Fathers: Greek Texts and English Translations of Their Writings, 2d ed. Edited and translated by J. B. Lightfoot and J. R. Harmer, edited and revised by Michael W. Holmes.}

The outworking of this spiritual sacrifice described in §14 is the argument for charity norms provided in Didache §4. In this way, the language in the Didache resonates with various NT texts (also pertaining to charity norms), particularly Matt 19:21; Luke 14:33; Acts 2:44. 4:32; Gal 6:6; and Rom 15:27.\footnote{Some datings of the Didache make this problematic, for more on NT citations, see Christopher M. Tuckett, “Synoptic Tradition in the Didache,” in The New Testament in Early Christianity. La Réception Des Écrits Neotestamentaires Dans Le Christianisme Primitif, ed. Sevrin, BETHL (Leuven: University Press). For a rigorous survey of New Testament charity norms in Luke, see Christopher M Hays, Luke’s Wealth Ethics: A Study in Their Coherence and Character (Tübingen: Mohr Siebeck, 2010). Hays also provides an erudite survey of 2-3c. wealth ethics in Christopher M Hays, “Resumptions of Radicalism. Christian Wealth Ethics in the Second and Third Centuries,” Zeitschrift für die Neuestamentliche Wissenschaft und Kunde der Alteren Kirche 102, no. 2 (2011): 261-82. Of note is his suggestion that divestiture and sharing, whilst rigorously commended by Clement, Cyprian, and several other contemporary traditions, is meant to be voluntary and for the good of the Christian community.} It is also significant to note that, as Del Verme argues, these charity norms resonate in significant ways with first-century Jewish practice.\footnote{Marcello Del Verme, Didache and Judaism: Jewish Roots of An Ancient Christian-Jewish Work (New York: T & T Clark International, 2004), Chapter 2.} There is more to be said about the charity commended in the Didache and other Ancient Church Order documents, but I will attend to this further below. Suffice it to say for now, this metaphor of self-sacrifice and relinquishment persists such that the practice of burnt offerings is not discarded by Christians but intensified, such that two centuries later Gregory Nazianzus can
suggest, quoting Rom 12:1: “let us become reason endowed whole burnt offerings.”

A number of scholars have noted the implications for work that arise from the call to charity and radical divestiture that these early Christian writers commend. Spiritual sacrifice entails a relinquishment of the income that arises from one’s productive occupation, and a commitment to continue work as a means of self-support and charity. Yet it should also be noted that in early Christian social ethics, this instruction to become burnt offerings also works out in other ways with regards to work. First, the relinquishment of control over one’s vocation may be represented not merely in giving away possessions, but also in framing one’s vocation. In a sense, here is a clear parallel to the account of a “workmanship of risk” given by Pye which I have noted above. Pye argues that craft cannot be purely oriented towards utility and function, but must also attend to what he polemically terms “wasteful beauty.” In a similar way, as I have also noted above, Rowan Williams and Benedict XVI argue that one’s posture towards design ought not be autonomous and egocentric, but rather operate with a recognition that all human designs are derivative, as they are based on the divine work of design. Human originality is not to be discarded, but it cannot be described as absolute.

A second way in which spiritual sacrifice is worked out with with respect to work is with regards to one’s choice of vocation. Here one find a Christian account which seeks to balance the dialectic of work agency between individual and corporate work. The writer of the later church order document, the Apostolic Constitutions (likely written in the fourth-century), makes this point at length describing extensively those vocations which persons must renounce if they are to be baptised. In §16.1, the confessor is charged with the task of inquiring with the person who wishes to be baptised “about the crafts and work of those who will be brought in to be catechised as to what they are.” Collusion with paganism is not to be tolerated (i.e., the idol maker, priests of idols, etc.), nor are occupations which engage in violence (the brothel keeper, gladiators, charioteers, soldiers, etc.). Similar arguments are offered by Augustine who is critical of those trades which are inherently oriented towards vice. In his letters he advises against participation in moneylending or the mercantile trade, given their propensity towards the distortion of value. He also expands on this list of unacceptable occupations elsewhere in his commentaries on

55 Oration 40.40, Translation from Harrison, Festal Orations, 136.

the Psalms. Thieving, prostitution, pimping and sorcery cannot be justified even if income from such activity staves off financial hardship or provides a basis for charitable giving. In this way, fundraising for charity cannot be an absolute good, but is kept subordinate to other goods in preserving these dialectics which I have noted at the end of chapter 1 and encouraging the just treatment of workers and the preservation of material value.

Another example of vocational relinquishment as an outworking of charity can be found in John Chrysostom’s account of “intellectual property.” It is important to situate this account within Chrysostom’s broader ethic with regards to wealth and possessions. As is well known among Patristic scholars, Chrysostom presents a sustained argument against personal wealth, which we find in clearest expression in his Homilies on 1 Timothy. Oliver O’Donovan presents a helpful frame for understanding Chrysostom’s seemingly radical objection and the nature of the ascetic discipline he is prescribing:

It would be a misunderstanding to read it as an attack on material goods as such, nor do we ever find in John the suspicion that ownership by communities could be as greedy as ownership by individuals. Separating resources from the common stock and keeping them in private hands is the root offense; anything that perpetuates the result of that offense perpetuates its guild. The moral worth of charitable giving is to reverse it; in passing to others the resources that they need, the giver reasserts the original community of Goods.

This approach to the community of goods also shapes Chrysostom’s approach to intellectual property. Just as material goods are owned by God, so too is skill and knowledge. Chrysostom suggests this in a sermon on spiritual gifts, inspired by 1 Cor 14:3. He notes that Paul’s underlying point in 1 Cor 14 is to “[give] the higher honor to that which tends to the profit of the many.” In his homily on 1 Cor 3:18-19, Chrysostom lays out his perspective on property. The trouble lies, he suggests, not in the possession of wealth, but in the spending of it:

the things which are not thine own become thine, if thou spend them upon others: but if thou spend on thyself unsparingly, thine own things become no

57 Cf. Augustine en. Ps. 128.6; cf. en Ps. 36.6.c. This and subsequent translations of Augustine’s works are from Works of Saint Augustine (Brooklyn, NY: New City Press).

58 Joan Lockwood O’Donovan and Oliver O’Donovan, From Irenaeus to Grotius: A Sourcebook in Christian Political Thought 100-1625 (Grand Rapids: Eerdmans, 1999), 91.

longer thine. For since thou usest them cruelly, and sayest, “That my own things should be altogether spent on my own enjoyment is fair:” therefore I call them not thine own. For they are common to thee and thy fellow-servants; just as the sun is common, the air, the earth, and all the rest…. So also in regard of wealth. If you enjoy it alone, you too have lost it: for you will not reap its reward. But if you possess it jointly with the rest, then will it be more your own, and then will you reap the benefit of it.60

Among Chrysostom’s many comments across his sermons there is an abundance of comments on wealth. I have chosen this homily in particular as here Chrysostom extends this notion of common property to a form of intellectual property: one’s cultivated skill. After describing a biological analogy, he moves on to the trades:

For the smith also, if he chose to impart of his craft to no one, ruins both himself and all other crafts. Likewise the cordwainer, the husbandman, the baker, and everyone of those who pursue any necessary calling; if he chose not to communicate to anyone of the results of his art, will ruin not the others only but himself also with them.61

As expected, Chrysostom inflects this lesson with some sense of class consciousness, but the crucial difference is that the ordinary working classes must share their skill by the very nature of those professions. If the gardner chooses to hoard his seeds without planting them, he will bring famine, just as, if the tiller of the soil refuses to share the “labour of his hands” he will starve. It is a unique privilege of “white-collar” workers that they may, by benefit of accumulated (or inherited) income, choose to withhold their skill. But this is, according to Chrysostom, a grave mistake: “For in every thing to give and receive is the principle of numerous blessings: in seeds, in scholars, in arts. For if any one desire to keep his art to himself, he subverts both himself and the whole course of things.”62 Here one finds a convergence of Chrysostom’s attitude towards property and sloth. What we do not find is an explicit parsing out of the logistics of how this might function. Did Chrysostom expect doctors and lawyers to provide free services? Exclusively? We aren’t given a specific rule, rather the litmus by which such charity should be practiced is an evangelistic principle and this lack of rule is itself instructive:

Therefore as teachers, however many scholars they have, impart some of their lore unto each; so let thy possession be, many to whom thou hast done good. And let all say, such an one he freed from poverty, such an one from dangers.

60 Hom. in I Cor., 10.7.
61 Hom. in I Cor., 10.7.
62 Hom. in I Cor., 10.7.
Such an one would have perished, had he not, next to the grace of God, enjoyed thy patronage. This man’s disease thou didst cure, another thou didst rid of false accusation, another being a stranger you took in, another being naked you clothed. Wealth inexhaustible and many treasures are not so good as such sayings. They draw all men’s gaze more powerfully than your golden vestments, and horses, and slaves. Rather than provide a procedurally specific account of charity, these Patristic accounts provide contemporary workers with a challenging application of this notion of one’s self and work as a spiritual sacrifice, given as a burnt offering. This analogical use of the burnt offering extends the analogical appropriation of burnt offerings which, as I have argued above, one also finds in the NT and latter HB. Such a sacrifice is offered to the glory of God, freely, and with a joyful heart. Work which brings wealth is not ruled out in practice, but rather the crucial concern for these early Christian writers concerns the disposition of a worker towards their craft, and the way in which they appropriate the goods which result from their diligence in work.

63 Hom. in I Cor., 10.8.
Chapter 6
Firstfruits and the Consecrating Relation

“Honour the Lord with all your wealth, and with the firstfruits of all your harvest—your income—and your barns will be filled with grain, your vats will burst with new wine.” (Prov 3:9–10)

1. Firstfruits in the Hebrew Scriptures

In some contrast to the burnt offering which offered a relevatising of work and a strong subordination of one’s work to divinely reckoned purposes, the offering described in Leviticus chapter 2—the מנחה [mnhh], or cereal offering—provides the setting for a liturgical consideration of work quality and excellence. It does, of course, remain intimately related to the burnt offering. On a basic level, a cereal offering is prescribed after each עלה [ʿlh].

Also paralleling the עלה, a pleasing aroma [ריח נחת] is a crucial aspect of the offering (cf. Lev 1:9, 13, 17; with 2:2, 9, 12) and it is meant to be brought willingly. However, it also differs procedurally in several respects and these differences provide the basis for the consecratory experience that I will explore primarily in this chapter. First, only a representative portion, literally a “handful” is meant to be incinerated. The rest of the offering provides the basis for a consecrated meal to be eaten by priests on the Tabernacle grounds. Regarding this limited portion, the first half of verse two instructs the priest to “scoop out of it a handful of its choice flour and oil” (JPS). In the second half of the verse, we read that he is to take this incinerated handful and “turn [it] into smoke

2 On “willing” participation, see section 3.1, in Chapter 1 on 45.
on the altar, as an offering by fire, of pleasing odour to the LORD” (JPS). This portion is described using a term unique to Leviticus: מֵאָכָלָה [’zkrh], which is often translated as “token” portion. However, many lexicographers tend to rely upon a definition by derivation, arguing that it likely derives from the root זך (“to remember”). This provides the basis for the suggestion that the offering is a “memorial portion” (cf. ESV, NJB contra NRSV “token”). Another feature of the מֵאָכָלָה which sets it apart from the burnt offering is its designation as קדש קדשים [qdš qdšym / “most holy”] in Lev 2:3, 10 and 6:10–11, 18. As with the next offering, the מֵאָכָלָה, this designation is applied to the portion that is eaten. This need not imply, as Milgrom suggests, that the category does not apply to the incinerated portion, but for my purposes here, it is important to underline the importance of Levitical assignment of holiness to the non-memorial portion. Related to this is a third and final noteworthy difference from the previous offering, with מֵאָכָלָה, there is a connotation that the aspect of this offering was to be joyful. In slight contrast to the previous offering, which carried aspects of expiation and entreaty, the מֵאָכָלָה is meant to be propitiatory. Milgrom follows Driver in suggesting that “The most likely definition for biblical מֵאָכָלָה is “a present made to secure or retain good will.”

Though quality is not a consideration that is exclusive to the מֵאָכָלָה (as the instructions for the burnt offering emphasise the unblemished state of the animal) the cereal offering does provide a particularly intense emphasis on the freshness and excellence of the offering in question. The materials for the cereal offering are repeatedly described in Lev 2 (vv. 1–2, 4–5, 7; and in 5:11; 6:8, 13; 7:12; 14:10, 21; 23:13, 16–17; 24:5) as using “choice flour” [סָלָל / sɔl], which was, as Wegner observes, “significantly more expensive than barley (2 Kgs 7:1, 16, 18) and was used in fine cuisine (Ezek 16:13), proper for entertaining guests (Gen 18:6).” The specific elevation offering described in Lev 23:17 is a festal variation on this cereal offering.

---

3 Cf. HALOT 1:269-70, TDOT 4:79-80. Milgrom follows G. R. Driver: “No definitive answer can be given. Provisionally, it is best to understand ḥazkārā as related to zēker ‘remembrance’, referring to the fact that the entire cereal offering should really go up in smoke and that the portion that does is pars pro toto: it stands for the remainder; in other words, it is a “token portion.” Ibid., 182.

4 Cf. Ibid., 183.

7 Paul D. Wegner, “סָלָל,” NIDOTTE.
In this case, the first-ness is even more underlined: it is to be a new grain offering [literally “offering of the new” Heb.: מנה חדש / mnḥh ḥdšh] brought in the form of two loaves baked with leaven (Lev 23:16). As in Lev 23:17, the end of Lev 2 (vv. 14-16) details a specific instance of the cereal offering: the מחרים [bkwrym] or firstfruits offering. In seeking to unpack the emphasis on quality found in the cereal offering instructions, I turn to a survey of these “firstfruits” in order to fill out this account of the cereal offerings.

Firstfruits in the Hebrew bible, or מחרים [bkwrym], is a relatively narrow liturgical term, referring to an offering which is often in close association in the Pentateuch with the second of the three great pilgrimage harvest festivals (alternately given the name Feast of harvest [ Feast of Weeks / ḥg qṣyr] found in Exod 23:16, Feast of Weeks [ Feast of Weeks / ḥg šh’r] found in Exod 34:22, Deut 16:10, 16; Ezek 45:21; 2 Chr 8:13), and the most obvious “day of firstfruits” [ Feast of Firstfruits / ywm bkwrym] found in Num 28:26. As in numerous cases above, my reading here is deliberately agrarian, attempting to take account of the perspective of the Hebrew labourer, with sensitivity to a possible relation between the form of their harvest work and the worship offering designated as “firstfruits”. As with burnt offerings, firstfruits offerings do not begin or end with Leviticus, rather there are a number of consecratory offerings in the Pentateuch which surround firstfruits and the feasts which parallel them. Some contemporary readers take the designation of firstfruits as a ‘token offering’ and go on to presume that the use of a representative portion might permit a detachment of the meaning of firstfruits from an agricultural context. Given my overarching argument here that the complex of offerings “draw in” the work of Israel, I will question whether this accurately represents the full force of the term and conversely whether ‘firstfruits’ may have—as with the “unblemished” status of the burnt offering—invoked ancient notions of productive excellence. Given the brevity of the accounts which concern firstfruits, I will also make references to some semantic relationships which can help illuminate a reading of firstfruits.

The emphasis on the importance of offerings to YHWH in the form of firstfruits surfaces with explicit force in the Mosaic law in Exodus. Notable here is the inversion of context. While the language of firsts occurs frequently in the first thirteen chapters of Exodus, 16 out of 18 of these early occurrences concern the infanticide perpetrated by Pharaoh and the final reciprocal plague against the oppressive and hard-hearted monarchy of Egypt with the death of all first-born

---

Egyptians (Exod 11:5, 12:29). This appreciation of “firstfruits” also highlights the faithfulness of the two midwives, Shiprah and Puah, in defying the Pharonic orders to commit genocide in Exod 1:17. In the first text using this language in the context of worship (shortly following the report of the final plague and preceding the capitulation of Pharaoh) the Israelites are instructed to “Consecrate all the first-born to me, the first birth from every womb, among the Israelites” (13:2 NJB). The Exod 13 text codifies the requirement of offerings which are first-fruits or first-born. The text also offers a further clarification to their status; they are to be consecrated. This instruction to consecrate or make holy, a rendering of the Hebrew קדש served back to God’s work in Gen 2:3, where “God blessed the seventh day and made it holy.” With regards to the children implicated in Exodus I would suggest that this consecration may be read as an etiological remembrance of the Exodus deliverance of the Israelite first-born, and thus a sort of dedication for service. This association between firstfruits and offerings is explicated and reaffirmed in the formal covenant law at Sinai (Exod 22:28-30, 23:16, 19) and stressed further in the reiteration of instructions given after Israelite idolatry (34:19-20, 22, 26) alongside passover and sabbath observance. The importance of these first-fruit instructions are underlined by their location within those laws that, as Durham notes, “set Israel apart from all other peoples as Yahweh’s own unique and loyal people.” As I will explore further below, the specific act of consecration as associated with the first-fruits offering is also formalised in the later Pentateuchal texts. It is important to re-iterate, as I have observed above that one may best understand these offerings not as pure categories, but rather formal liturgical acts which exist within a tradition-complex of other offerings, in this case a tradition-complex of “first-offerings,” which is initiated in Genesis. Keeping this in mind, I will note some of the differences between the various accounts of firstfruits but also probe these these texts for points of convergence with regards to this concept of firstfruits.

2. Selection: Quality or Chronology?

10 Structurally both texts are set in the midst of a feast-observance command, a theologically important point which I will address in the next section.

11 Ibid., 461.

The firstfruits offering expands the dedication (or consecration) of first-born children into the domain of horticulture and agriculture. This feature comes into sharpest relief when one turns to the aspect of selection which precedes the bringing of this offering. As regards the question of quality, one may prefer not to say that the firstborn (male) child was the most valuable or best in an absolute sense, but they surely provided a function within Israelite society which was of particular importance. Further, to simply state the obvious, when the firstborn was dedicated, they were often a family’s only child. As we will see, the notion of first-ness in agricultural offerings is to a certain extent bi-furcated in the Hebrew bible. Milgrom, in particular, suggests that there is a priestly status distinction to be drawn between two different Hebrew liturgical terms which are both often translated into English and Greek as firstfruits: [םִּבְכָּרָיָם] תֹּטֶרֶם and רָאָשָׁת [םִּשְּׂフィ] תֹּטֶרֶם based on former being “raw” and the latter “processed.” In his words, “Bikkurim refers to ‘the first ripe,’ and re’sheet to ‘the first processed’.”13 After some wrestling with his approach, I have accepted Milgrom’s proposition with some reservations. This reading is well-supported by Rabbinic materials, particularly Mishna Bikkurim and Mishna Terumah, and is affirmed by similar usage in the Qumran materials as well.14 [םִּבְכָּרָיָם] תֹּטֶרֶם are, whenever a distinction is made, specifically taken from newly ripened produce (Exod 23:16, 19; 34:22; Num 13:20; Neh 10:37).15 There is a direct correlation here between the first-born and the first-grown such that plucking the first head of ripe grain and dedicating it to God matches the consecration of the promise that the first-born child represents. Yet it should be noted that this unity of distinction relies on a strong separation of priestly and non-priestly literature, and there are is little internal warrant in the texts of Exodus for such a specific reading. Finally, while Milgrom’s distinction is absolute with regards to רָאָשָׁת תֹּטֶרֶם, he is less sure with רָאָשָׁת [םִּשְּׂフィ]. “Outside of P, re’sheet has two other meanings: Either it is equivalent to רָאָשָׁת, ‘first ripe’ (e.g., Deut. 26:2, 10; Jer. 2:3), or it means ‘the best’ (e.g., 1 Sam. 2:29b; 15:21; possibly Exod. 23:19; 34:26).”16

Though a full treatment of רָאָשָׁת תֹּטֶרֶם lies outside the scope of this study, some comments are in order regarding the relation between these two offerings, lest the reader come away with a dichotomy rather than a differentiation between the two

13 Ibid., 427.

14 For more on later Jewish adaptation of these offerings, see Encyclopedia Judaica, 19:651-54.

15 Ibid., 428.

16 Ibid., 428.
offerings. Both offerings function within what I have termed earlier a tradition-complex of “first-offerings,” and it is important to note that they serve the a purpose which is closely related to the burnt offering, namely to subordinate the economic activity of Israel to worship of YHWH. This convergence of first-offerings is actualised in the LXX, where different Hebrew terms are flattened in their translation into the Greek ἀπαρχή ['aparchē]. The Greek rendering, while blurring interesting distinctions, does not distort the more fundamental purpose of these liturgical acts. In this way, the consecratory activities of the two offerings can be seen as complementary. With בכורים [bkwrym] one offers up the first moment of promise in the harvest. With ראשית [r ṣyl] and the other first-fruit offerings, this act of dedication evolves into one of selection, where discernment is engaged in a particular way.

In the context of the feast of harvest/weeks, the firstfruits offering is specifically one of wheat or baked loaves of wheat-bread (generic in Exod 23:16, wheat in Exod 34:22, grits in Lev 2:14, oil, wine, and grain in Num 18:12), but later developments indicate that firstfruits come to involve all of the seven rabbi-approved agricultural products.¹⁷ As “first” can indicate a spectrum of produce, it should be noted that this is nonetheless first-ripe such that all of the products though unprocessed, were edible. Further, the first-ripening of these products can extend from April-May for barley and wheat and into September-November for olives. The use of wheat for the firstfruits offering in the context of the festival of weeks is a perfectly sensible one, as this is the chronologically first of the first-ripe.¹⁸ The inclusion of other products indicates that firstfruit offerings extended well beyond the liturgical confines of the feast of weeks, and this fact should prevent one from assigning too narrow a provenance to the practice. The dual-practices of בכורים [bkwrym] and ראשית [r ṣyl] offer a double-weaving of Israel’s worship through their work. First, as anyone who has planted a garden can attest, the discovery of the first piece of ripe produce is a moment of discovery ripe with excitement. As an Israelite farmer first beheld a bit of ripe grain their practice would have been to cut it off to save for a נבורה הבכורים offering. Work was woven into work a second time at harvest, after one had, most likely in cooperation with one’s wider community, gathered, picked, harvested, threshed, and ground the various “fruits” into their final products. As a

¹⁷ “Wheat, barley, grapes, figs, pomegranates, olives used for oil, and dates for honey (Dt. 8:8)” described in Mishna Bikurim 1:3.

¹⁸ Borowski, Agriculture in Iron Age Israel, 34-37.
group of labourers beheld the final harvest, whether bounteous or sparse, there would be a moment in which the אֶשֶׁר־רָאָשִׁית offering was set aside by from among the various products for the most excellent product. For oil, it was the first skimming of the first pressing (labeled as “first cold press” on our olive oil bottles now); with wheat it was the finest of the grain.

This relationship between the two firstfruit offerings is reinforced in several texts by proximity, when one finds a dedicatory חִבֹּרֶים offering, another involving selection is almost certainly nearby. This is the case with Exod 22:29 and 23:16. While 23:16 provides the more terse instruction concerning the liturgical calendar, 22:28 involves refined produce. Regrettably, English translations do not always render the possible force of the vocabulary in 22:28 regarding the quality of the offering requested. The NAB offers the flat rendering, “the offering of your harvest and your press,” while the REB offers, “first of your harvest, whether grain or wine,” which still leaves the force of “first” ambivalent. Durham recommends a more vivid rendering, based on the LXX, “You are not to hold back your bumper crop and your vintage wine and richest oil.”

Even though he relies on the more elaborate LXX text of 22:28, Durham’s more vivid rendering does also seem to capture the uniquely agrarian aspect of the text in the MT. This first-skimming belongs to the ‘first-processed’ category, and some more vivid language is certainly called for.

This relation between firstfruits and quality is also represented in Numbers by a resonance between רָאָשִׁית חִבֹּרֶים [ḥbrwym] and רֵאָשִׁית [rʾšyf]. The context of chapter 18 is a working out of the priestly prebend taken from this offering, as described tersely in Lev 2:3, 9 and 6:7-23. To this end, Num 18:12 offers a string of nouns in construct which the JPS aptly translates as: “All the best of the new oil, wine, and grain — the choice parts that they present to the LORD — I give to you.” Verse thirteen uses יִקְטֹּב in a way parallel to רָאָשִׁית in the former: “The first fruits of everything in their

19 Durham, Exodus, 309. See also Ibid., 329-30. This reading of 22:28b as a qualitative rather than chronological designation is also affirmed by Houtman, who notes, “In light of 22:28b, 29 it is likely that 22:28a is about the yield of cultivated fields and in particular about the first and best part of it.” Cornelis Houtman, Exodus, Chapters 20-40, ed. Cornelis Houtman, Gert T.M. Prinsloo, Wilfred G.E. Watson and Al Wolters, trans. Sierd Woudstra, Historical Commentary on the Old Testament (Leuven: Peeters, 2000), 233. He suggests, along with Alter that the two terms מַלֶּאתך וְדָמַעך may also represent a hendiadys, i.e., “the very best of the harvest.” This is also suggested by the LXX, “ἀπαρχὰς ἀραβῶν καὶ λειψῶν” in which first-fruits is more explicit.

20 Behind Durham’s translation lies a decision with regard to a critical textual issue, namely the difference between the MT which is more exclusively occupied with liquid produce, as the JPS translates it “the first yield of your vats” and the LXX, which expands the text to refer to “ἀπαρχὰς ἀραβῶν καὶ λειψῶν” [“First fruits of your threshing floor and press”] (Exod 22:28 [22:29] NETS).
land, that they bring to the LORD, shall be yours” (Num 18:13 JPS). In a less obvious way, Num 15:20–21 seems to make this sort of association: “as the first yield of your baking, you shall set aside a loaf as a gift; you shall set it aside as a gift like the gift from the threshing floor. You shall make a gift to the LORD from the first yield of your baking, throughout the ages” (Num 15:20–21 JPS). This suggestion becomes all the more important when one notes how, in the text of Deuteronomy, mention of bàné-mé is completely absent. Here the first-fruits ceremony is not absent, but is described, as in Exodus, without detail (Deut 16:10, 16). There is more elaborate description of ṣa’asâr offerings, particularly in their social dimension to be found in Deut 26. Tigay, in his JPS commentary suggests that the instructions here merely elaborate on the firstfruits Temple offerings (Exod. 23:19; 34:26; Num. 18:12–13; Deut. 12:6; 14:28–29; 18:4). This concurrence in Deuteronomy between firstfruits and a liturgical feast leads me to my next point of emphasis regarding the social aspect of these offerings.

3. Distinguishing Wafers from Handfuls: “Token” and “Representative”

One can find reference to the persistence of the firstfruits feast in the life of Israel in several apocryphal and NT texts, under a new name: Pentecost. In Tobit 2, Pentecost is described as the occasion for a great meal at home, and the occasion for hospitality. The instructions in Deuteronomy regarding the festival note that the Israelites are literally to offer their firstfruits as a gesture of deference to God, but this occurs in the context of a great feast, as the instruction in Deut 16:11 to “party” implies (described as a “holy convocation” מַקְרָא קָדָשׁ in Lev 23:21 and Num 28:26). “Party” is my (admittedly casual) rendering of שִׁמְחָה which is often rendered with the now stale-sounding “rejoice” (TNIV, ESV, JPS, NRSV), but the writers of the NAB, perhaps actually having attended a party once or twice themselves opt for “make merry.” Given my contention above that all the produce

---

22 Cf. Tob 2:1; 2 Macc 12:32, Acts 2:1; 20:16; 1 Cor 16:8; 2 Chr 8:13.

23 “Then during the reign of Esar-haddon I returned home, and my wife Anna and my son Tobias were restored to me. At our festival of Pentecost, which is the sacred festival of weeks, a good dinner was prepared for me and I reclined to eat. When the table was set for me and an abundance of food placed before me,” (Tobit 2:1-2 NRSV).

24 See esp. NIDOTTE, 3:249 and also TWOT 2:879.
was likely meant to be of the highest quality, this may have been quite a significant event. It is also significant to note how, in Deuteronomy, 26:1-11, the firstfruits festival is placed as one of the two liturgies (the other being tithes, described in 26:12-15) to be practiced in the newly inhabited promised land. By this measure, this is a liturgy of renewal and crucial formation.

This “holy convocation” was likely also a glad day for priests who were entitled, given the Levitical instructions assigning it as a prebend, to consume the bread made with this fine flour and the two sheep brought by the congregant (“they shall be holy to the LORD, for the priest,” Lev 23:20 JPS). Similar, but more terse instructions for the same feast are found in Num 28:26-31 and Deut 16:9-12. It is important to note that the specific instructions provided might seem to affirm the fact that this offering is to be a token offering, as it is only one loaf and two sheep. But, as Durham notes, in commenting on the occurrence of firstfruits in Exodus, the command regarding firstfruits is intended to underline how “an appropriate respect for YHWH also requires priority for him in the matter of offerings.”

As I have suggested above with regards to the נְחָלָת [mnḥḥ], this deference need not be austere as the prohibition provided in Exod 22:28-30, sets the tone: this prohibition “is against a token offering from a bounteous crop, a legalistic expression of the obligation as opposed to a joyous offering in thanksgiving.” In this way, the offering is to be not a token offering with no resemblance to the material of the harvest and one’s hard work, as in the case of the tasteless machine-made communion wafers that are so often used in contemporary liturgies around the world. This is a representative portion which is drawn into worship in a materially coherent sense.

This case for firstfruits is not of purely technical interest, but actually serves as a way of properly deploying the moral force of these worship instructions. Consecration as a theological category is associated in a crucial way with excellence in the work which is brought. For an age in which workers are increasingly alienated from their work, such a link commends the importance of affirming the goodness of the ordinary agricultural work of Israel and provides some ritual context for the further affirmation of excellence. Seen in this way, the offering of first-fruits also has a certain unity, providing Israel with an opportunity to affirm their holiness as a people by consecrating their best to YHWH. In this way the first born child and the

---

25 Durham, Exodus, 329.

26 Ibid., 330.
pinnacle of Israelite agriculture and horticulture are set apart for a similar purpose and “consecrated to Me” (Exod 22:31, NRSV). Just as the people of Israel are set-apart from the nations with a special status as God’s first-born son (Exod 4:22) and consecrated by their worship, so too the inner-pattern of this worship involves the consecration of first-things back to YHWH. This consecration of the agricultural and horticultural first-fruits of Israel’s work also parallels the contribution of artisans to the consecrated place, the Tabernacle, as described above. Indeed, the Hebrew verb for consecration, קדָשׁ [qds], in nominal form translates as sanctuary.

I have established that the bringing of firstfruits implicated the work of Israel in a direct way in their worship and provided a reminder in practical form that one’s daily work was to be inextricably involved in one’s worship. Notably, this involvement was not blind, but rather carried a qualificatory aspect such that excellence in agricultural craft was observed and celebrated in the process of selection. Bringing the first and best portion to God concurrently celebrated craftsmanship and relativised the place of wealth (even the product of one’s own labour). This relativisation also works itself out in the communal aspect, as the firstfruits festival is wrapped closely in humanitarian service. The ingathering which led to the firstfruits marked the beginning of the gleaning season in Israel. Any person who had observed or participated in the feast would have known that there was an aspect of justice which accompanied the offering of the most excellent portion of the harvest. There is further strong warrant to believe that marginalised persons were meant to be invited to the feast to enjoy the freewill (and gourmet!) offering. Along these lines, Carl Armerding observes:

For the well off to rejoice without considering the widow, the orphan and the alien would have been unthinkable and a denial of all that covenant blessing involved. In Deuteronomy 16 (cf. Deut 26:1–15) the emphasis on giving back is even stronger. The worshiper brought a freewill offering (literally, “the sufficiency of what your hand can afford”) according to the measure of God’s blessing. He rejoiced before YHWH, together with all his extended family, sons and daughters, male servants and female servants, the Levite (to whom no inheritance of land had been given), the resident alien, the orphan and the widow.\(^\text{27}\)

In particular, in the context of what Von Rad suggests may be one of the earliest recognisable creeds of Israel, at the climax of Deuteronomy in 26:11 we find a stipulation that this feast is to be enjoyed “together with the Levite and the stranger

in your midst” (JPS). I will extend this discussion of the social aspect of these offerings with my analysis in the next section of the זבח שלמים [zbh šlmym] offerings. First, however, I turn to the NT in order to provide a closer look at the appropriation of this consecratory logic and liturgical celebration of excellence.

4. **Firstfruits in New Testament Perspective**

Cereal offerings are not mentioned explicitly in the NT. The LXX renders the Hebrew nouns presented in construct, קרבן מנה [qrbn mnḥḥ] =literally: “offering of [a] gift” as δῶρον θυσίαν [dōron thyśiān] =“gift sacrifice”]. Among the various mentions of θυσίαν in the NT, some addressed in the previous section, none of these refer explicitly to cereal offerings. As Averbeck notes, “the NT recognized the distinction between the religious and secular usages of the Heb. Term… more readily than the distinction between any offering, and specifically a grain offering.”

In consequence, while there are a number of instances of either δῶρον or θυσίαν in the NT, the meaning is almost always intended generically, i.e., regarding “sacrifice”. The Hebrew בָּהָרֹד [bhwrwm] is translated in the LXX in two ways, first as ἀρχὴν θερισμοῦ [archēn therismou =literally “first of the harvest,” as in Exod 34:22]. These two words do not occur together in the NT. The second rendering, which Paul favours, is a modification of ἀρχή [archē]: ἀπαρχή [aparchē]. In the LXX ἀπαρχή is used in almost exclusively liturgical contexts (the one exception is in 2 Sam 1:21 in Samuel’s reference to “bounteous fields”). The explicit liturgical nature of the term here should not be surprising, given the extensive GR usage also in a ritual context. It also bears mention, as I have already noted in the previous section that ἀπαρχή is utilised more broadly in the LXX than merely in translation of the Hebrew בָּהָרֹד, referring in some cases to other offerings which also occur within a ritual context. Given the apparent absence of any reference to cereal offerings in the NT, one can find a more robust basis for comparison in seeking to demonstrate the canonical persistence (albeit in a metaphorical context) of ἀπαρχή. For this comparison, I will maintain an awareness of the meaning and use of this concept as I have detailed

---

28 Averbeck, “Minhâ, Gift, Present, Grain Offering, Sacrifice,” in NIDOTTE, 1:978
29 Cf. Ibid., 978-80.
30 cf. Hdt. 4.71, Plat. Prot. 343b
31 I base my choice to limit this study to Pauline instances, mostly because he is the only New Testament writer to deploy the concept in a sustained way. There are two non-Pauline instances of ἀπαρχή in the NT, James 1:18 and Rev 14:4, but neither of these is substantially different from the usage by Paul that I detail here.
above as a backdrop for an analysis of Paul’s use of “firstfruits.” In biblical studies, Paul’s use of liturgical metaphors has been recently highlighted in several exceptional studies and it is my hope that this study can further highlight both the scholarly neglect of Pauline liturgical metaphor, and the “fruits” that can come from close scrutiny of them.  

It is important to note a few caveats at the outset of this treatment of firstfruits in Paul’s epistles. The scope of this chapter (or indeed, perhaps even an encyclopaedia) does not permit treatment of the vast and growing literature concerning Paul’s knowledge of and relationship to GR culture and/or Hebrew culture or this relationship to a reconstructed audience for each epistle. However, a few observations along these lines are in order. (1) First, it is important to note that there is a well-attested GR ἄπαρχή festival and liturgy. There in no contemporary study of the firstfruits festival in GR context, or more particularly Paul’s relation to it, and this would be a valuable line of inquiry one may hope will be taken up in NT scholarship. One need not presume, though, that the GR firstfruits festival was at odds with the Hebrew one. The most important point of distinction for my analysis of Paul’s theology here is with respect to the person being worshipped and along these lines, it may be fair to consider Paul as thinking in greater continuity with Hebrew than with GR religion. (2) Along similar lines, I will bracket out considerations in my discussion of Pauline audience. These considerations are no doubt of value, but reconstructions of Pauline audience are sufficiently complex that space does not permit critical interrogation of these reconstructions in parallel to my more conceptually focused analysis and the broader purposes of this study would be only tenuously edified by such an undertaking. My purpose with regards to these Pauline references to “firstfruits” is relatively constrained: to explore the ways in which Paul’s use of the liturgical language of firstfruits might be conceptually coherent across his epistles and test the hypothesis that he may be operating with a thick understanding of Hebrew liturgy which maintains an awareness of the aspect of quality and excellence which I have noted above. Though one cannot deny that Paul’s usage may be deployed with reference to Hebrew or GR liturgical context, I will assume that it is a mistake to attempt to dichotomise Paul’s Jewish context and the thought-world which nourished it and his experience of the GR world and that

32 For more on the scholarly literature regarding Paul’s use of non-atonement cultic metaphors, see Nijay K Gupta, Worship That Makes Sense to Paul: A New Approach to the Theology and Ethics of Paul’s Cultic Metaphors (Berlin; New York: De Gruyter, 2010), 9-26.
the audience for his epistles may well have had experience of both as well.³³ As I have argued above, it may be best to situate the Hebrew concept of firstfruits in a tradition-complex of “first-offerings.” This wider liturgical perspective, extends beyond exclusively Temple-focused liturgy, and allows for the possibility that Ancient Near-Eastern persons with more moderate exposure to Jewish practice would still have had some exposure to the unique inflections of Hebrew firstfruits liturgy. Neither of these assumptions are radical, but as I hope to demonstrate, considering Hebrew liturgy does provide interesting illuminations of Paul’s often thickly metaphorical and terse prose. Paul’s use of metaphor does not simplistically deploy merely the form of this liturgical concept, but rather his use betrays an awareness of the meaning embodied by the full ritual practice of the firstfruits offering.

5. Firstfruits in Paul’s Epistles

With the stage set, I proceed now to analysis of three different Pauline epistles where the concept of firstfruits is deployed in order to better understand Paul’s metaphorical use of these liturgical concepts: 2 Thessalonians (2:13), 1 Corinthians (15:20, 23; 16:15), and Romans (8:23; 11:16; 16:5). The first Pauline usage of this term comes in 2 Thess 2:13 near the end of his exhortation to the Thessalonian church where Paul resumes his thanksgiving offered in his introduction (1:3) and just before his prayer in 2:16-17. Paul suggests: “But we ought always to give thanks to God for you, brothers beloved by the Lord, because God chose you as the firstfruits to be saved, through sanctification by the Spirit and belief in the truth” (2 Thess 2:13 ESV). One may wonder why Paul did not simply use the more generic non-liturgical term ἀρχὴ [archē =“first”].³⁴ Given Paul’s use of the liturgically oriented term, some comments are in order as to what sort of meaning might be added by this choice. First, one should note that 2:13 has a theological context that is soteriological, namely God’s choice of the Thessalonian brothers to be saved. In this sense, Paul reverses the expected doxological context: God brings a firstfruits offering to the broader church and it is constituted by the faithful Thessalonians. Perhaps further undermining a more generic meaning, the sense here cannot logically

³³ For recent examples of this argument see Martin Vahrenhorst, Kultische Sprache in Den Paulusbriefen (Tübingen: Mohr Siebeck, 2008). Gupta, Worship That Makes Sense to Paul: A New Approach to the Theology and Ethics of Paul’s Cultic Metaphors.

³⁴ A minority of manuscripts actually revise to ap arches demonstrating the valid temptation towards this option.
be chronological either, as (FF Bruce suggests) “the Thessalonian believers could not be called the firstfruits of Macedonia, for the Philippian church was established before theirs.”

Paul’s second usage of ἀπαρχὴ [aparchē] occurs in a Christological context in 1 Cor 15:20 and 23: “Christ has been raised from the dead, as the first-fruits of all who have fallen asleep” and “but all of them in their proper order: Christ the first-fruits, and next, at his coming, those who belong to him” (NJB). These texts occur in the midst of Paul’s larger argument for the significance of Christ’s bodily resurrection. One might think the usage here to be substantially different from 2 Thessalonians, except that Paul reverts to a similar example later in 16:15: “You know how Stephanas’ have been the first-fruits of Achaia and have devoted themselves to the service of God’s holy people” (1 Cor 16:15 NJB). In this sense, the house of Stephanas has made of themselves a first-fruits offering, again to serve the broader community. There is a tension with an exclusively chronological reading of firstfruits here, as with 2 Thessalonians above, as Acts 17:34 seems to indicate that the Athenians were converted before Paul had been to Corinth. A final similar usage of the term can be found in Rom 16:5 where Paul makes more straight-forward reference to another firstfruit Christian: Epaenetus, the first Christian convert of the Asian province with Ephesus as its capital. While nearly all of Paul’s use of firstfruits are in reference to particular persons, there are two remaining instances of ἀπαρχὴ in Romans which implicate a more complex group of agents to which I turn next.

The occurrence in Rom 8:23 brings firstfruits into a third pneumatological domain (in addition to the human and specifically Christological dimensions described above). In this instance, it is not the persons who are the firstfruits of God’s work, but rather Paul notes that “we… have the firstfruits of the spirit” [τὴν ἀπαρχὴν τοῦ πνεύματος / tēn aparchēn tou pneumatos]. So what is it that possession represents? It is important to first note that possessing here is incomplete, realised fully only in eschatological perspective. Paul has already suggested at this point that both the creation (v. 22) and “we ourselves” (v. 23) are groaning [στενάζω / stenazomen] under the weight of suffering as all anticipate their final redemption where by the prototypical firstborn Christ, we will be firstborn [πρωτότοκος / prōtōtokos] among many brothers (v. 29). With this limit in mind, one can read

35 F. F. Bruce, 1 & 2 Thessalonians, WBC (Waco, Tex.: Word Books, 1982), 190.

Paul’s reference to πρωτότοκος in v. 29 as referring to the ministerial work of his audience. The same language is employed in the LXX description of Abel’s offering, which was “the firstborn of his flock” (Gen 4:4) and in the dedication of firstborn sons (Exod 22:29; 34:19, Num 3:12–13). This NT usage is similar to that in the Hebrew Scriptures, inasmuch as there is an aspect of dedication, but the NT usage also adds a newly eschatological dimension. Those Christians who have the firstfruits of the spirit are to endure the sufferings which come from being a committed minority in lieu of the larger brotherhood which is to follow in the newly constituted Kingdom of God.37

This brings me to the final instance of the firstfruits in Paul’s writing which can be found in Rom 11. This instance draws clearly on a more explicitly agricultural dimension of firstfruits and it is this usage that I find to have the most unexplored theological consequences. Here, I would argue, Paul deploys logic which is intrinsic to the practice of the Jewish pilgrimage feast and firstfruits offerings. In Rom 11:16 Paul makes a rhetorical suggestion which functions as part of a much larger argument in Rom 11. Paul suggests: “If the dough offered as firstfruits is holy, so is the whole lump, and if the root is holy, so are the branches” (ESV). By way of this rapid procession of metaphors in Rom 11, Paul offers an argument for the place of Israel (and by extension the cultus) in God’s salvific work now displayed with fullness in the resurrection of Christ and the meaning of (at least some of) Israel’s rejection of that good news.38 But for my purposes here, it is important to note that these metaphors are meant to provide some clarification as to the nature of inclusion in God’s salvific work (cf. Rom 11:13-15).39 In verse 16 one finds Paul’s very brief use of firstfruits followed by another metaphor (using roots and branches) in rapid succession which further affirms his point regarding holiness and inclusion (11:16). Paul elaborates on the meaning of his second metaphor in vv. 17-24, but does not return to explicit mention of ἀπαρχή [aparchē] here. The usage here is what I would describe as a more specific sense of the dedicatory consecration described above.

37 The liturgical reading I have noted above may also be complemented by related research into Paul’s reliance on GR role-ethics. See especially Reidar Aasgaard. My Beloved Brothers and Sisters!: Christian Siblingship in Paul (London: T&T Clark, 2004), 137ff and especially 144-45. Thanks go to Ben Edsall for bringing my attention to Aasgaard’s work. In this way, Paul can be referring concurrently to GR backgrounds and a specific Hebrew liturgical context as regards the dedication of the firstborn which is one thread among the tradition-complex of firstfruits offerings.

One need not assume that Paul’s brevity with regards to the firstfruits analogy is because the details behind the metaphor are insignificant, as it is just as plausible that the rich ritual context already provides a narrow meaning for his statement: here Paul situates the notion of firstfruits within a broader consecratory logic. In this way of thinking, we bring firstfruits to God as an act of offering or dedication and this act consecrates the remainder which has not been brought. In the logic of Paul’s argument the offering of firstfruits does not grant it a separate and unique status from the rest of the economy which produced it. To the contrary, it draws the entire batch into an act of consecration, marking it all holy. Along these lines, Cranfield argues:

The OT nowhere says that this offering hallows the rest of the dough: its purpose seems rather to have been to free the rest of the dough for general consumption (cf. Lev 23:14). But a comparison of Lev 19:23–25, according to which the fruits of the trees are to be regarded as ‘uncircumcised’ until an offering has been made to God from them, suggests that it would be quite natural for the Jew to think of the offering of the first-fruit cake as purifying the rest of his dough.40

Paul’s relatively straight-forward use of the firstfruits offering concept by way of metaphor establishes a point of logical continuity between the Jewish and early Christian understanding of firstfruits and offerings. A consequence of this reading might be to temper a reading of Paul’s exhortation in Gal 4:10 regarding feast days, with the observation that his overall intention is more subtle than to merely dismiss the liturgical function of feasts wholesale. In a similar eschatological sense, in Col 2:16, these days are described as “a shadow of the things to come,” (v. 17) and indeed though the calendar is practiced by pretentious persons and commended by Judaisers for righteousness (both postures which Paul resists, cf. Gal 4:10) they have a glorious function in the age to come. While Paul may dismiss practice for the sake of a rhetorically laden theological argument, I would argue here that the moral logic which undergirds the notion of firstfruits has a persistent place in Pauline theology.

This is also emphasised in the text of Galatians by the turn to a metaphor regarding dough. Many commentators treat this as a reference to a generic and as of yet undiscovered GR proverb and yet the imagery of φύραμα [phyrama] is parallel in many ways to that used in Rom 11. Here Paul omits the obvious reference to ἀπαρχὴ [aparchē] and the context is inverted (namely that unholiness can corrupt an entire batch). In his study of yeast or leaven [ζύμη / zyme] in the TDNT, Windisch

---

considers whether Paul’s usage in 1 Cor 5:6 / Gal 5:9 might be resonant with a Jewish festival, but his inquiry is with exclusive regard to the feast of unleavened bread. He concludes that Paul “goes rather beyond the thought and usage of the Jewish festival.” Yet Windisch’s primary reason for assigning the source of this saying by Paul to a GR context is the negative aspect of the statement: “In spite of all the various analogies, the parable bears the stamp of originality. In contrast to the Plutarch tradition Jesus views the process of leavening as something healthy.” As I have suggested above, there seems to be reasonable warrant to ask whether there may also be a Jewish liturgical context for understanding Paul’s statement in Galatians.

This survey of Pauline use of firstfruits reveals that, though it may have been treated as perfunctory or empty by celebrants, the practice of the festival of harvest offered a yearly celebration which could be theologically and morally laden with meaningful ritual actions, which provided a practical elaboration of Israel’s convictions regarding the interrelation of good work, proper worship, and justice. I have attempted to demonstrate in this study that one may also consider a Hebrew understanding of firstfruits as compatible with Paul’s usage. Further, one may attempt a provisional synthesis of Paul’s use of this term presuming a Jewish context. Put briefly, here is how I think Paul’s use of the metaphor might overlay onto a summary of the literal details of the ritual practice: As in the Hebrew Scriptures, where the first-fruits offering consists of the people of God bringing a token representation of the first and/or very best results of their labour for worship, Paul suggests that Christians may offer ourselves in an even more direct way. The connotation, particularly in 2 Thessalonians is that these human-firstfruits, particularly the protological and superlative firstfruit, the person of Christ, are the products of a labouring creator God. These persons are not merely chronologically first, but their first-ness betrays an aspect of quality: they are the best produce among the early harvest of God’s cultivation among the gentiles, preeminent, in the case of Christ. Finally, these firstfruit-persons are brought not exclusively before God, but in a striking (and I daresay Christological) inversion they are brought before the unholy people. As with the Hebrew festival, these firstfruits are offered benevolently not just for gleaning, but for a great feast of the people which foreshadows the great and intimate banquet which is to come. In his recent book, Nijay Gupta vindicates the

---

41 TDNT, 2:905.
42 TDNT, 2:905-6.
argument I am making here, in providing a more general basis for such a reading. In
surveying Paul’s use of holiness language, more generally, he argues that “language
of holiness suggests a cultic interpretation at the most general level.” Looking
specifically at the “wish prayer” in 1 Thess 5:23 (and 3:13), Gupta argues that Paul’s
imagery “is further enhanced by the similar adjectives of ‘complete’ or ‘perfect’ — a
descriptive category prominent in the Jewish conceptions of purity.” Thus, “It is
possible that Paul’s thinking is similar—just as the regulatory sacrifices are required
to be holy and impeccable, so the offerer—even the person-as-offering—must surely
meet that same standard in regard to character.” This account makes clear, I submit,
the theological continuity between Lev 2 (and the other firstfruits texts in the Hebrew
Scriptures) and their metaphorical deployment in the NT. To further affirm the
relevance of firstfruits to Christian worship, I turn now to some analysis of the
appearance of this term and the ethical values which it implies in Early Christian
practice.

6. “Firstfruits” in Christian Practice

An indication of the importance of “firstfruits” in-offertory practice for
Christians may be found in the Italian Basilica di Aquileia. The current Cathedral
was built in the 11th century, on top of a much more ancient basilica, preserving a
mosaic floor beneath which was likely built between 313 and 333 AD, just after the
conversion of Constantine. What we find in these mosaic tiles is an astonishing
testimony to offertory practice in the late antique church. Peter Brown aptly
summarises the scene:

The mosaics in the middle of the nave made plain what the inscription meant.
Wealth had flowed into the church. Octagonal panels of mosaic showed
chubby servants in late Roman dress as they gathered the good things of the
earth. Their busy activity evoked the many scenes of bucolic, innocent
prosperity that were places on the mosaics of contemporary villas. At the
center, a winged Victory, with a laurel crown on her head and a palm in her
hand, stood above two full baskets. These were the “first fruits” offered by
the laity to the church.⁴⁶

⁴³ Gupta, Worship That Makes Sense to Paul: A New Approach to the Theology and Ethics of
Paul’s Cultic Metaphors, 57.

⁴⁴ Ibid., 57.

⁴⁵ Ibid., 58.

⁴⁶ Peter Brown, Through the Eye of a Needle: Wealth, the Fall of Rome, and the Making of
One of the patrons of basilica construction explains the warrant behind his endowment to the church in another part of the mosaic which suggests that:

He did so de Dei done: ‘from the gift of God.’ This succinct phrase echoed the solemn prayer of King David, when he endowed the first Temple of Jerusalem: For all things come from Thee, and of Thine own have we given Thee (1 Chron. 29:14). This was a votive formula shared by Jews and Christians. It also occurred in Jewish synagogues… As in the synagogue, wealthy Christian donors claimed that by contributing to the church, they were giving back to God a little of the wealth He had showered upon them.”

While Brown emphasises the element of generosity which lay behind this early Christian practice, I wish to probe for the possibility that it may also have included a qualitative aspect, notably that those who brought firstfruits also brought their best.

This practice of bringing firstfruits offerings, alongside tithes and charitable free-will offerings finds explicit mention in almost all Ancient Church Order documents, starting with the Didache, and this is an appropriate place to begin in seeking to clarify early Christian “firstfruits” practice. It is important to note that Jews continued in the practice of bringing firstfruits into the first century and this charitable giving continued to evolve as early Christian practice developed. Yet Jewish practice retained the recognition of quality in firstfruits offerings, as in first-century Jewish practice “First fruits of doubtful origin were not accepted as offerings” and were liable to be refused. In his extended study on the Didache, Del Verme argues that particularly those passages which refer to firstfruits offering in the Didache “seem to reflect an ongoing process of interaction with Judaism and Jewish institutions, pointing to the existence of a Jewish Christianity which existed within the bounds of the ‘Great Church’, and which had not yet manifested any of those traits of belief or practice which subsequently led to its marginalisation.” This suggestion seems appropriate given the points of resonance between the Hebrew offertory I have explicated above and the standard for bringing firstfruits which is presented in Didache §13, where the author proposes a mode of support for itinerant preachers who have become sedentary:

Take, therefore, all the first fruits [πᾶσαν οὖν ἀπαρχῆν / pasan oun aparchên] of the produce of the wine press and threshing floor [γεννημάτων ἄρνου καὶ

47 Ibid., 40.

49 Del Verme, Didache and Judaism: Jewish Roots of An Ancient Christian-Jewish Work, 189.

ἀλώνος / gennēmaton lēnou kai halōnos], and of the cattle and sheep, and give these first fruits to the prophets, for they are your high priests. But if you have no prophet, give them to the poor. If you make bread, take the first fruit and give in accordance with the commandment. Similarly, when you open a jar of wine or oil, take the first fruit and give it to the prophets. As for money and clothes and any other possessions [παντὸς κτήματος / pantos kēmatos], take the first fruit that seems right to you and give in accordance with the commandment [ἐντολὴν / entolēn].

The language of this Didache passage is notably resonant with Hebrew offertory instruction, made most obvious by the two references to ἐντολή [=“commandment”] (Didache 13:5, 7) but also by the mention of “threshing floor” and “winepress” which together resonate with the firstfruits texts in Num 15:20; 18:27, 30 which use the same nouns: ἀλώς [halōs] and ληνός [lēnos]. Further, the Didache refers to these firstfruits as priestly prebends, resonating with the firstfruits instructions in Lev 23:20. Yet in spite of these similarities, the author of the Didache intensifies the offering, extending both the scope of generosity—not merely to priests, but also to the poor—and extending the pool of goods which are eligible as such firstfruits to include any κτήμα [ktēma =“possessions”]. It is also important to note that the second “command” is not actually provided in the Hebrew Scriptures, i.e., giving from among one’s possessions more generally. It may be more likely that the writer of the Didache is making reference to the complex of charitable giving which had arisen in both Christian and contemporary Jewish practice.

While this intensification takes place with regards to the generosity of the offering, there is simply not enough detail to decisively affirm that the qualitative aspect of the offering persists in early Christian practice. Del Verme argues, as I have above, that the Greek usage of these Hebrew terms betrays a merging of categories: “The fact that the same term ἀπαρχῆ… can represent two separate terms in Hebrew, is itself an indication that the terms ἁρμόμενα ἀρσενικά and τρόποι were not always strictly differentiated in Hebrew or at least in the way the Hebrew was understood by the translators.” This “semantic bi-valency” parallels the LXX usage and consequently he argues that it is better to read the use of firstfruits as operating in a

50 Didache, 13:3-7.

51 Cf. Ibid., 192.

52 First century Jewish charity is strongly commended by the Tannaitic and Amoraic rabbinic traditions, cf. Ibid., 195-96 See also Robert M Grant, Early Christianity and Society: Seven Studies (San Francisco: Harper & Row, 1977), 125-26

“comprehensive sense,” including the whole variety of possible emphases that I have outlined above in my study of firstfruits. Based on this conclusion, Del Verme proposes an English translation of Didache 13:3 in a way which preserves an emphasis on quality: “Therefore take all the best of the products from the winepress and threshing floor, from the cattle and sheep, and give them to the prophets, because they constitute your high priests.”

It is also interesting to note that later church order documents which make use of the Didache as a primary source preserve reference to a specific firstfruits offering. The Didascalia Apostolorum expands on the Didache instructions in §2.25.7 and §2.25.9: “set apart special offerings and tithes and first fruits for Christ the true high-priest, and for his ministers, as tithes of salvation.” Further, the Apostolic Tradition of Pseudo-Hippolytus provides an extended prayer for firstfruits offerings in §31 which indicates that they are still offered in kind. In fact, some of the Latin renderings of this section can be even more explicit in their designation, as they make use of the more explicit phrase: “primitias fructuum prima gamina - which can be translated ‘the best of the fruits’ or simply ‘the firstfruits of the growth.'” In Del Verme’s reading, in the Apostolic Constitutions, reference to firstfruits (§7.29.1-3) continues to operate with a comprehensive sense of possible meanings, including qualitative understandings of the offering, and its designation for sacerdotal and charitable purposes: “the ἀπαρχή of Did. 13 in the end provided the model and influence for any form of social welfare system which included the offerings necessary for the maintenance of the clergy and the poor in general: the term ἀπαρχή, therefore, was not used only to indicate sacerdotal offerings.” Yet, in spite of this semantic openness, he notes that the sacerdotal offering (i.e., for priests) was the most frequent implication in these later church order documents. The variety of tithe barns scattered across Europe demonstrate how offertry practice continued to be brought in kind until very recently, in some cases only the past hundred years. Even in late modern practice, agricultural workers often brought their tithes in the form of produce and such qualitative concern would have been unavoidable. These

54 Ibid., 208, 197.
56 Del Verme, Didache and Judaism: Jewish Roots of An Ancient Christian-Jewish Work, 208.
57 Ibid., 208.
58 Ibid., 203.
ancient references to firstfruits offerings in both Christian Scripture and early Christian practice preserve a legacy of material engagement which has recently been picked back up, particularly in Roman Catholic liturgical reform which has sought to place the sacerdotal function of offertory back in a wider context.

In affirming the suggestion that I have made in this chapter, Scirghi argues that contemporary offertory practice ought to re-engage with the material quality of offerings. In a way that resonates with Northcott’s critique of eucharistic practice, Scirghi wonders if the experience of “industrial eating” has led to a utilitarian expression with regards to the material used in the Eucharistic feast: “just by the fact that most parishes use hosts—little round wafers of wheat, rather than real bread—contributes to an attitude of convenience and efficiency. The advantage to using hosts rather than bread is that they avoid the messiness of crumbs, and they are easier to store and preserve in the tabernacle. Here again we can ask, has the value of purity (efficiency) prevailed over that of unity, that is, the one bread broken for the community?”

In examining the “theory of art that the book of Exodus develops in connection with the construction of the sacred tabernacle” Benedict XVI argues that human participation in God’s design or דָּבָר [dabar] implies that “Humans can only correspond to God’s greatness if they also give to their response, according to the extent of their ability, the complete dignity of the beautiful, the height of true “art.”

This is taken up in a very practical way in the General Instruction of the Roman Missal (2010), the authorised guide for priests seeking procedural instruction in administering the Eucharist. In §320, the instruction suggests: “The bread for celebrating the Eucharist must be made only from wheat, must be recently made, and, according to the ancient tradition of the Latin Church, must be unleavened.” Perhaps even more sharply, the document proceeds to argue in §321 that: “By reason of the sign, it is required that the material for the Eucharistic Celebration truly have the appearance of food.” These are promising points of engagement with the rich Hebrew and Christian legacy of offertery practice. Yet, in practice much contemporary worship conveys little awareness of this rich intertextual legacy and

---

material consciousness, interrupting the process in which worship might draw in the work of worshipers and leaving them potentially captive to prevailing secular economic conceptions of work. I would argue that there is much to be re-gained by a liturgical practice which draws upon the Hebrew account and places renewed emphasis on the materials which are offered for worship. In this way, work is not drawn into worship indiscriminately, but rather worshippers are encouraged to bring their best to the offering. This in turn sustains a dynamic in which workers are not merely given therapeutic affirmation, but the real content of their work provides a backdrop for the celebration. In the chapter which follows, I take up this aspect of celebration with a closer look at the peace offering and the ethics that flows from this practice.
Chapter 7
“Eaten” Offerings and Liturgical Sociality

1. Eaten Offerings in the Hebrew Scriptures

As I have suggested in the preceding two chapters, the features of the various offering ritual instructions overlap and complement one another. Consequently, in arriving at the third offering to be considered in this study, the שלם זבח [zbh šlmym =“eaten offerings” or “well being offerings”], it is appropriate to note that I have already illuminated aspects of sociality in the previous two offerings as well. This being the case, my treatment here will be more brief than the previous two chapters, as the task which remains is to note how this third offering consolidates and emphasises the social aspect of offertory ritual. Yet even though sociality is not a new theme, it is crucial to pause and note how the שלם זבח brings the aspect of the meal—which has been present in the discussion above—front and centre.¹

I begin by noting that as Lev 7:11-16 details, the שלם זבח is “the joyous sacrifice par excellence.”² In each of the three different categories pertaining to the occasion under which the שלם זבח might be brought, this arises in a different way. These categories include: (1) נדבה [ndbh=“freewill”] which is a “spontaneous byproduct of one’s happiness, whatsoever its cause” (2) following a נדר [ndr=“vow”] as described in Gen 28:20-22, and (3) תודה [twdh=“thanksgiving”].³

¹ For more on the various translations that have been pursued for שלם זבח and some appraisal of their viability, see Milgrom, Leviticus 1-16, 220-21 and Levine, Leviticus, 15. See also section 3, in chapter 6 on page 198 above.

² Milgrom, Leviticus: A Book of Ritual and Ethics, 29 contra Wenham, to a certain degree, see pp. 78-80.

³ Milgrom, Leviticus 1-16, 218-19.
The joyous aspect of this offering, if somewhat muted in Lev 3 is emphasised elsewhere in the Pentateuch. For example, in Deut 27:6-7, the ritual to celebrate the entry of the people of Israel into the promised land involves an offering of well-being, “You shall offer on it burnt offerings to the LORD your God, and you shall sacrifice there offerings of well-being and eat them, rejoicing before the LORD your God” (JPS). Similarly, Num 10 describes how “your joyous occasions” involve burnt offerings and sacrifices of well-being.

The הבזה שלמים [zḥ šlmym] shares several features with the offerings discussed in the previous two chapters. The offering is to be of highest quality (“without blemish” in 3:1), the process is an intimate one as the celebrant is to lay their hand upon the animal and assist in the slaughtering process. Blood, that life-force which is reserved only for YHWH, is reserved and dispersed (v. 2b) and this offering is offered upon the fire to bring a “pleasing odor to the Lord.” Particularly, one reads in verses 3-4 that certain portions of the slaughtered animal, primarily fat and kidneys, are to be incinerated. One learns more about what is to be done with the remainder of the carcass from the parallel details provided in Lev 7:15: “the flesh of his thanksgiving sacrifice of well-being shall be eaten on the day that it is offered; none of it shall be set aside until morning” (JPS). In continuity with the firstfruits festival I have highlighted above, this is to provide the basis for a great feast, particularly given the amount of meat involved. As Milgrom suggests: “Except for kings and aristocrats, meat was eaten only on rare occasions, usually surrounding a celebration. Because a whole animal was probably too much for the nuclear family, it had to be a household or clan celebration.”

The stipulation that it must be consumed on the same day as the sacrifice intensifies this feast and also provides occasion for a large act of hospitality. Across the Hebrew Scriptures, one can find instances of this sacrifice providing the basis for a shared meal and hospitality. This includes Jacob’s celebration with his kinsmen described in Gen 31:54 and the blasphemous meal shared by Israel in Exod 32:6 (to which I will turn more fully below). Of particular note is the way that this meal offering accompanies the dedication of the place of worship: the Tabernacle altar dedication ceremony described at length in Num 7 involved, as v. 88 summarises, a meal that resulted from 24 bulls, 60 rams, 60 goats, and 60 lambs. 1 Kgs 8:62–64 describes an even more opulent meal hosted by Solomon at the Temple dedication ceremony.4 In Isa 56:7, the prophet’s description

---

5 See also 2 Chr 5:12-13 and my analysis above on Kings and Chronicles.
of the celebration on the new Temple on God’s holy mountain involves יְהֹוָה [‘lh =“burnt offerings”] and זְבָח [zḥ =“sacrifices”] and Ezekiel also describes the rededication of the altar in Ezek 43:27 as involving a meal offering.

Particularly with the sacrifice described in Lev 3 this was meant to be a holy meal with YHWH as a guest. This is underlined in vv. 3-5 which suggest that the priests were to incinerate the reserved organs and animal fat, “as an offering by fire, of pleasing odour to the LORD.” It is noteworthy that, in contrast to other ANE rituals, the deity is considered present at the meal with those worshipping. Along these lines, Milgrom notes, “in Mesopotamia, the gods did not even participate in a shared meal; a king might serve a banquet and invite the gods to it, but he would prepare a separate banquet for himself and his nobles.” However, in affirming divine presence, it is important to avoid a crass reading of supposedly “primitive” sacrifice in this text. Indeed, the purpose described in Leviticus and elsewhere is explicitly not to provide food for YHWH, nor is it to achieve mystic union. Rather, one finds here an act of encompassing hospitality where priest, worshipper, and creator share in a joyful celebration. As Levine suggests, this offered the “experience of joining together with the priests in a sacred meal at which God Himself was perceived to be the honored guest.” This is emphasised by the tendency by some translators to render זְבָח as “peace offering.” As one Rabbinic source suggests, this is because the offering “effects peace among the altar, the priests, and the offerer” (t. Zebah. 11:1), for “the suet is for the altar, the thigh and breast for the priest (see 7:30–35), and the skin and meat for the offerer” (Sipra, Nedaba 16:2). The moral force of this offering, then, is to redirect the profits of one’s work into an act of reconciling hospitality. For those Israelites whose work may have been solitary, this festal aspect brought the fruits of work into an explicitly social context. Against narrow construals of worship which only consider a single celebrant standing before the divine person, here one finds a scene where attention to God is part of a social experience of worship involving priests, the bringer of the offering, and their meal-party. I will

---

6 Though note Milgrom’s suggestion: “According to the Priestly texts, the meat of the well-being offering could be eaten anywhere and by anyone as long as the place and person were in a state of purity (7:19–21).” Milgrom, Leviticus 1-16, 223.

note further below the parallels to eucharistic notions of work here, and other scholars have drawn attention to the usefulness of the Eucharist in revealing a moral order and forming worshippers for moral interaction. 11 First however, it is important to note the prominence of the shared meal offering in the NT.

2. **Shared Sustenance in the New Testament and Early Christianity**

As Luke 22 suggests, Jesus’ last supper may have been a passover meal, such that the Eucharist is instituted over a זבח שלם [zḥ h šlmym]. 12 Shared meals are featured regularly in the subsequent witness to early Christian practice as with the meal described in Acts 2:46–47a which shares a number of the features I have described above as elements of the זבח שלם. Here the joy of those participating is foregrounded in this shared reconciling meal: “And day by day, attending the temple together and breaking bread in their homes, they received their food with glad and generous hearts, praising God and having favor with all the people” (Acts 2:46–47).

In a similar way, Paul emphasises the aspect of reconciliation in his eucharistic instructions in 1 Cor 11 which describes the eucharist as a shared meal. In contrast to those who eat ἀναξίως [anaxios=“unworthily”] (1 Cor 11:27) Paul commends both equal distribution of food (so that none may come hungry to the meal, cf. 1 Cor 11:21) 13 and shared presence (so that none may eat as if alone), “when you come together to eat, wait for one another” (1 Cor 11:33).

Several practices in early Christian eucharistic practice further corroborate a relation to the sociality of the זבח שלם [zḥ h šlmym]. First, a number of early Christian writers make reference to the sending of bread, via deacons, to be given to those who are unable to attend the eucharist. 14 This practice echoes the instruction in Didache §13 which I analysed above (cf. p. 209) in which offerings resulted in a charitable enterprise. Bradshaw affirms this relation:

> The earliest Christian eucharistic meal… did not merely express symbolically the love that the believers had for one another but was itself a practical expression of that love, as those who had means fed those in the community who were hungry, sending them home with leftovers to sustain them during

---

11 Examples of work as Eucharistic can be found in Jensen, Responsive Labor: A Theology of Work; Northcott, Moral Climate: The Ethics of Global Warming; Reed, Good Work: Christian Ethics in the Workplace.

12 For a summary of the literature in biblical studies on this assertion, see Thiselton, The First Epistle to the Corinthians: A Commentary on the Greek Text, 871-78.

14 Cf. Justin Martyr, Ad uxorem 2.5, De oratione 19.
the week and distributing portions to those unable to be present. It was no wonder then that one of the names used to designate that meal in some Christian communities was *agape* — the Greek word for ‘love’.\(^\text{15}\)

Counterbalancing this emphasis on the gathered body across the city is a provision that arises in the fourth century which attempts to limit or even prohibit outright the celebration of the eucharist in private houses. For example, in his shorter monastic rule (§310) Basil of Caesarea strictly “forbids celebrations in houses except in cases of extreme necessity.”\(^\text{16}\) In similar ways, several later councils, including the Council of Laodicea and the Second Council of Carthage sought to limit this practice. The eucharistic meal provided a context for shared sustenance and shared joy whilst remaining tethered, as much as possible, to the act of corporate worship.

A second practice which demonstrates the sociality of the offering, though in a slightly different way, is the practice of offertory processions. Though a number of contemporary liturgical reformers have focused on the procession as a context for the affirmation of the mutuality and reciprocity among those gathered, so far as I have found, no one has noted the significance for contemporary practice of the way in which the products of work were drawn into worship. As Cabié suggests, in the early form of the eucharist (post 2c.), “the faithful brought to the church the foods they had on their own tables at home.”\(^\text{17}\) This practice is well attested, finding affirmative reference by Cyprian and Augustine.\(^\text{18}\) In both North Africa and Rome, this become formalised in a double-procession with offerers bringing “gifts” in a way that paralleled the communion procession.\(^\text{19}\) With the singing of a Psalm, worshippers would file in and deposit their contribution for the elements of the eucharist on the table. The theological implications of this act were not lost on the early theologians, as Cabié notes, Augustine affirms this procession as an example “of the ‘marvelous exchange’ represented by the incarnation: Christ takes our humanity in order to bestow on us his divinity.”\(^\text{20}\) Though practice varied slightly among regions, the

---

\(^\text{16}\) Cited in Ibid., 28.

\(^\text{19}\) Ibid., 78.

\(^\text{20}\) Ibid., 78.
consecrated bread, which often exceeded the need for ritual use was distributed afterwards among the clergy and poor, in the practice I have noted in the previous chapter.

As Morrill notes, contemporary liturgical reformers have sought to revive this ancient practice as a way of emphasising “the full engagement of all in the liturgy, as enactors of the ritual symbolism, the source and summit of the people’s ongoing lives as the ethical, social, interpersonal work of human sanctification, of salvation.” He narrates an experience of this practice which is helpful in setting the promise of this practice for re-vitalising contemporary offertory practice:

I… joined the almost entirely African-American congregation [at St. Augustine’s in New Orleans] for what proved an exuberant two-hour liturgy combining the Mass of Paul VI with the music, bodily and vocal prayer styles, and preaching patterns of African-American Christianity. Most arresting and memorable for me were the two processions of the entire assembly framing the liturgy of the eucharist, which began with every member—old and young, women, men and children—coming up the main aisle to deposit their donations in a large basket at the foot of the altar, singing and dancing with the choir’s anthem. Bringing up the rear were elders and children bearing bread and wine. I was witnessing the type of procession about which I had read in Cabié’s historical study, and I was deeply affected, especially as I experienced the impact on the second procession for communion, how much more communal and consecratory and empowering it felt because of its mirroring the first corporate movement.

While Morrill focuses on the socially inclusive aspect of this practice, what strikes me is that such a practice provides an extraordinary example of the threading of worship and work together, weaving in a social aspect and tying the congregants to their very tangible offering. Though in the modern urban church this may not be possible, in an agrarian context, this practice would have also included the bringing of bread which someone had themselves baked and perhaps also grown. Work was drawn into worship in a tangible and indelible way.

3. Tithes and Moral Work

In much contemporary practice, offertory practice has been collapsed into the eucharistic “presentation of gifts” with a silent passing of plates while the liturgy is spoken and music played. While it is unlikely that worshippers have brought bread

Ibid., 39-40.
and wine, it is likely that at least some will have brought tithes. Yet, as I have noted at the outset, often the contemporary practice of tithing is liturgically thin, stripped down to a pragmatic weekly fundraising exercise. In closing this chapter, I turn to the end of Leviticus to re-examine one final offertory practice, of tithing, particularly because it has endured so persistently into modern practice. As I will argue, in addition to the diverse yet intertwined complex of offertory practices detailed above, the details of tithing practice narrated in Christian Scripture also invoke many of the practical elements which I have highlighted above and so for churches which only intermittently celebrate the eucharist, tithes provide an alternate site for a similar rehabilitation. While my treatment of Lev 1-3 above provided a somewhat compartmentalised look at these various aspects of the work-worship relationship, a more exhaustive look at the specific contours of tithing practice, set against a backdrop of broader Hebrew offertory practice, offers a striking critique of the superficial nature of modern tithing practice and an opportunity to recapitulate the various dimensions of work sociality, quality, and value I have treated above.

It is important to observe at the outset that tithing was not a practice exclusive to the Hebrew people. Thompson observes, “the practice of tithing, the custom of setting aside for the upkeep of the national Temples and the maintenance of the priests a portion of the annual increment of the land, was almost universal among ancient civilizations.” The antiquity of Hebrew tithing is affirmed by early mentions in Genesis. After Abram’s military success, we read that he “gave… one tenth of everything” to the priest-king “Melchizedek of Salem” (Gen 14:18, 20). Similar mention is found in Jacob’s vow “If God will be with me, and will keep me in this way that I go… then the LORD shall be my God, and this stone, which I have set up for a pillar, shall be God’s house; and of all that you give me I will surely give one tenth to you” (Gen 28:20-22). While these two texts provide little direction as to the importance of tithing in the life of Israel or its formal practice, the remainder of the Pentateuch provides more formal mention of the practice of “the tenth.” This is found particularly in the Mosaic laws where three parallel texts in Leviticus, Numbers, and Deuteronomy outline the procedural details regarding tithing. I begin with several points regarding the formal regulation of tithing in Leviticus as the terse

instructions in Leviticus gain further clarity in the tithe texts in Numbers and Deuteronomy.

The Lev 27 instructions note first that—as with the מנהה [mnḥḥ] and firstfruits offerings (with which tithing instructions overlap)—tithing involves an act of consecration. This involves a wide range of products, as tithes are to be drawn from much of the Israelite economy, either from the land or from herd and flock. The specific instances of seed, fruit, herd, and flock in Lev 27:30-31 need not be seen as exclusive designations, as Milgrom suggests, “the property that was subject to the tithe in Israel was grain, new wine, and new oil (Deut 14:23, etc.), as well as cattle and sheep (Lev 27:32). In a general context, however, the tithe appears to have embraced all kinds of property…. It seems, therefore, that the specification in the priestly and deuteronomic codes refers to only the most common objects of tithing in Israel.” Both offerings are consistently described as “holy to the Lord.” The Hebrew term שָׁם [qdwš] translated as “holy” is the adjectival form of the verb קדשׁ [qdš] =“consecrate”]. This emphasis on holiness more generally is established early in Leviticus and also in chapter 19. Ellen Davis builds on this suggestion, noting “Elsewhere in Leviticus, holiness is the special characteristic of the sanctuary and the priests who attend it, but here in the Holiness Code (chapters 17-26), that notion is democratized and vastly extended.” I would suggest that the language of holiness, closing every verse in Lev 27, pervades here also in a similar vein though this need not be seen as contrasting with other procedures detailed in Leviticus.

Another important element of tithe law is that tithes are to be produced in kind, representing a tenth of the flock or harvest given directly. This practice is verified by the variety of tithe barns adjacent to churches whose ruins are scattered across Europe. The remainder of this brief text in Leviticus is taken up by some specific instructions attending to the complicated logistics of such an in kind offering. Tithes can be “redeemed,” which implies that “offerings dedicated to God may be may be bought back… by the original offerer by paying the original price plus twenty percent. This principle applies to offered animals (v. 13), houses (v. 15), land (vv. 19–20), or tithes (v. 31).” The implication is that redemption offers a mechanism by which one can “buy back into one’s own possession something whose

---

24 Milgrom, Leviticus 23-27, 2422.
25 Davis, Scripture, Culture, and Agriculture: An Agrarian Reading of the Bible, 85.
26 Robert L. Hubbard Jr., NIDOTTE 1:776.
ownership had been in effect transferred to God.”27 One peripheral consequence of this stipulation is that tithes can in certain circumstances, essentially be paid in cash, with a “handling fee” of twenty percent. Interpreters have engaged in some conjecture regarding the implications of this stipulation in context. Of special relevance is the actual form of the ancient money economy and the degree to which it resembled the present day capitalist market-economies.28 Much has been written about the negative social impacts of money in contrast to gift-exchange or barter in kind on social relationships, but far less examination has been offered on the impact of a transition from in kind to cash tithes on worship.29 Further in kind stipulations are also made for the logistics of counting the tenth of a flock, such that “every tenth one that passes under the shepherd’s staff, shall be holy to the LORD” (Lev 27:33). This process of random selection might be seen as contrary to the selectiveness of a firstfruits offering described above, but inasmuch as this is the case, it emphasises that it is YHWH which makes the offering holy, not its quality per se.30 As I shall demonstrate below, the more specific provisions listed in Deut 14 also fill out the details of in kind provisions and confirm that the redemption of tithes is to be the exception and not the rule of tithing.

In approaching the texts of Numbers and Deuteronomy, one finds several new themes as well as elaboration on the tithe topic. While the recipient of tithes is resoundingly affirmed as “the Lord” in Leviticus, this is expanded, or designated more specifically to the Levites in the latter Pentateuch.31 It is noteworthy that Num 18 is more widely concerned with the abstention from manual labour commanded for

27 Ibid.

30 Milgrom suggests that the firstfruits offering was “a token gift” and subsequent celebration of the firstfruits festival with only two loaves would seem to confirm this assessment. Milgrom, Leviticus 23-27, 2403. In this way the firstfruits would have offered a contrast to with the more quantifiably substantial “tenth,” and thus likely held a different function.

31 Whether this ascription to “the LORD” is exclusive of priestly or Levitical designation is not necessarily obvious in the text. See Levine, Numbers 1-20, 435.
the family of Aaron and the house of Levi in exchange for the exercise of their priestly duties. They receive more than just the tithes, but also the תרומות\footnote{Num 18:8, JPS.} [\textit{trwma}="offerings" or "holy things"] of which tithes are a part, "My gifts, all the sacred donations of the Israelites."\footnote{Cf. Exod 28:1-30:38, Josh 13:14-33.} The tithe described in Num 18 is meant to be given in recognition of their Temple service because the family of Aaron has been set apart for priestly duties and they lack both land and time as the result of their status and priestly duties.\footnote{Cf. Exod 28:1-30:38, Josh 13:14-33.} In this way, one finds the same holiness theme from Leviticus as the centre of tithing practice extended here in Numbers.

One of the most notable affirmations within the text of Deuteronomy is the festal cast given to tithing. In Deut 14:23, the tither is commended to "consume the tithes of your new grain and wine and oil, and the firstlings of your herds and flocks, in the presence of the LORD your God, in the place where He will choose to establish His name, so that you may learn to revere the LORD your God forever" (Deut 14:23 JPS). Similarly, cash redemption of tithes is allowed for geographical challenges, so that "should the distance be too great for you, should you be unable to transport them [tithes]… you may convert them into money" (Deut 14:24–25a JPS). In spite of this logistical consideration, the outcome is still a great party:

Wrap up the money and take it with you to the place that the LORD your God has chosen, and spend the money on anything you want — cattle, sheep, wine, or other intoxicant, or anything you may desire. And you shall feast there, in the presence of the LORD your God, and rejoice with your household. (Deut 14:25b-26 JPS)

The contrast with Numbers as ascribing tithes to the Levites should not be construed too strongly, as the immediately following instruction instructs Israel not to "neglect the Levite in your community, for he has no hereditary portion as you have" (Deut 14:27, JPS) and then suggests formally:

Every third year you shall bring out the full tithe of your yield of that year, but leave it within your settlements. Then the Levite, who has no hereditary portion as you have, and the stranger, the fatherless, and the widow in your settlements shall come and eat their fill, so that the LORD your God may bless you in all the enterprises you undertake. (Deut 14:28–29 JPS)

Here the divine blessing of manual labour is contingent upon the third year tithe redirection, a command reaffirmed in Deut 26:12-15. Perhaps the more significant point to be made in terms of jurisdiction in the three texts is not to be found in their
dissimilarities, but rather in their consistency: in none of these texts do tithes fall under the jurisdiction of a human monarch.

Tithes surface in various places in later OT texts, but of special relevance for this study is the apparent subversion of tithes into a royal tax. In the tragic scene presented in 1 Sam 8, part of Samuel’s warning regarding the consequences of monarchy in Israel is the subversion of the tithe. He warns, “He [the king] will tithe your crops and vineyards to provide for his courtiers and his officials…. He will tithe your flocks, and you yourselves will become his slaves.”

The Prophet Malachi observes the actual realisation of this warning many generations later:

Will anyone rob God? Yet you are robbing me! But you say, “How are we robbing you?” In your tithes and offerings! You are cursed with a curse, for you are robbing me—the whole nation of you! Bring the full tithe into the storehouse, so that there may be food in my house, and thus put me to the test, says the LORD of hosts; see if I will not open the windows of heaven for you and pour down for you an overflowing blessing. (Malachi 3:8-10 NRSV)

Though it is difficult to parse out the particular details of Israel’s decline from faithful observance of tithing to the “robbing of God,” (which echoed in the gospel passages analysed in the previous chapter) several clues surface along the language of reform. In particular, the reforms of both Hezekiah and Nehemiah involve the reinstitution of tithing. Nehemiah notes his discovery of the abrogation of tithing, “I also found out that the portions of the Levites had not been given to them; so that the Levites and the singers, who had conducted the service, had gone back to their fields” (Neh 13:10, NRSV). Nehemiah’s observation is loaded, as the Levites, according to the Pentateuchal texts examined above, rely exclusively on tithes for their livelihood. To “go back to their fields,” implies not a return to some former arrangement, but a complete transformation of their vocation. In contrast, in the vision of the well-ordered community, Nehemiah suggests, “They set apart that which was for the Levites; and the Levites set apart that which was for the descendants of Aaron” (12:47b). While Nehemiah is concerned with the lapse of practice in post-exilic Judaism, one finds a similar situation earlier under the monarchy highlighted by the reforms of Hezekiah. The account describes Hezekiah’s discovery and reinstitution, but implicit in this account is the fact that Israel has alongside their idolatry lapsed in its practice of tithes and offerings. 2 Chronicles relates,

34 1 Samuel 8:15, 17 NJB. Strangely, many English translations fail to render “tithe” literally here while they do so elsewhere, including the NRSV and TNIV.
He commanded the people who lived in Jerusalem to give the portion due to the priests and the Levites, so that they might devote themselves to the law of the LORD. As soon as the word spread, the people of Israel gave in abundance the first fruits (r'ṣyṯ) of grain, wine, oil, honey, and of all the produce of the field; and they brought in abundantly the tithe (m'šr) of everything. The people of Israel and Judah who lived in the cities of Judah also brought in the tithe of cattle and sheep, and the tithe of the dedicated things (qdšym) that had been consecrated to the LORD their God, and laid them in heaps. In the third month they began to pile up the heaps, and finished them in the seventh month. (2 Chr 31:4-7, NRSV)

One finds in 2 Chronicles a composite of several elements found in Pentateuchal accounts of tithing; the tithe is tied to the livelihood of the priests and Levites and these tithes are affirmed as holy: the “tithe of the dedicated things.” Further, the people bring an abundance of “first fruits,” and this offering even begins in the “third month” which would correspond to the feast of firstfruits. Inasmuch as Israel’s later attempts to rehabilitate the practice marks an apprehension of its inner-significance, both texts underline the central importance of tithing to Israel and demonstrate some of the integration of the various themes presented above with regards to offerings more generally. Support of the priests, festal celebration, ongoing affirmation of the “choicest of the first fruits” and the integration of manual labour into a worship which affirmed the holiness of YHWH and His people were not discretely separated but were intertwined. Further, these later texts demonstrate in the shape of their reforms that observance with regards to firstfruits and tithing does not become more formal and thus abstracted from their domestic roots in Israelite labour, but in fact remain “close to the ground.” Austerity does not replace feasting and token offerings do not replace true abundance, but rather tithes and offerings serve as an intensive affirmation of Israelite work which is radically intertwined in the worship of YHWH. This rich ritual practice elaborated for tithing which I have described here could scarcely provide a stronger contrast with much of the contemporary offertory ritual practice that I problematised at the outset of this chapter. In contrast to the instructions in Scripture regarding tithing, contemporary practice lacks social context, festivity, or explicit material reference to the work of the offerer.
Conclusion

In the second part of this dissertation I have sought to highlight the intricately woven account of liturgical practices in Christian Scripture and the ways in which their exercise might have proven morally formative. However, it is crucial to note in concluding this study that Scripture preserves two different accounts of the moral aspect of worship, one positive and the other negative. In the positive account—which I have devoted most of my attention to in this dissertation—one finds specific points of contact where the ritual act of worship draws in the work of the people and grants it a specific moral contour in a dynamic which I have described as consecratory. Yet this consecratory dynamic is not automatic; it can be interrupted or subverted because it is predicated upon the activity of right worship. This may seem an obvious point, but the manifold accounts of idolatry in Scripture attest that the subversion of this consecratory dynamic is close at hand in any act of worship. The work of the people can result in the further thriving of all creation, but this can just as easily be turned—as narrated in Exod 32—towards the fabrication of a golden calf. In Exodus, alongside the paradigmatic account of Tabernacle construction, one finds a double subversion of work and worship. First, there is an inversion of the Tabernacle construction process which I have treated above. The work of the people which had been employed in the fabrication of the place of worship is turned to the fabrication of an idol. Second, the right worship which I have treated in this chapter above is also subverted. Bizarrely, after building a new altar for this golden calf, Aaron announces, “Tomorrow shall be a festival of the LORD!” (Exod 32:5b, JPS). It is noteworthy in the verse that follows that the Israelites perform the same forms of offering before this new altar: “Early next day, the people offered up burnt offerings and brought sacrifices of well-being; they sat down to eat and drink, and then rose to dance” (Exod 32:6, JPS). There is nothing categorically different about the act of
worship narrated in Exod 32. All that has changed here is the object of worship. This realisation highlights the importance of craftsmanship in worship, with its emphasis on careful practice and attention to material, which I have highlighted in the first chapter. Also important is the point of impact: when worship is subverted, the impact is socially dispersed. Regarding these consequences, Jacob Milgrom notes:

Finally, why the urgency to purge the sanctuary? The answer lies in this postulate: the God of Israel will not abide in a polluted sanctuary. The merciful God will tolerate a modicum of pollution. But there is a point of no return. If the pollution continues to accumulate, the end is inexorable: “Then the cherubs raised their wings” (Ezek 11:22). The divine chariot flies heavenward, and the sanctuary is left to its doom. The book of Lamentations echoes this priestly theology: “The Lord has abandoned his altar, rejected his Sanctuary. He has handed over to the foe the walls of its citadels” (Lam 2:7). That the sancta can become polluted beyond repair is demonstrated by the measures taken by both Hezekiah and Josiah to invalidate the bâmôt: Hezekiah hēṣîr ‘removed’ them (2 Kgs 18:4); presumably he razed them to the ground.¹

As Milgrom argues, while misbehaviour affects corporate worship first, the eventual consequence, as I have argued in my analysis of Jeremiah above, is the breaking of moral relationships in other domestic contexts, jeopardising the very basis for moral action.

I am not the first to note how modern accounts of economics, markets and business have developed a resilient amoral character. Thin theologies of providence deployed by late-Enlightenment thinkers left unchallenged the proclamation that the invisible-hand of the market would naturally guide human economic activity towards the common good.² This same humanistic optimism was taken up in Taylor’s scientific conception of work management. I want to suggest that these alternative “theologies” have shaped modern Christian offertory practice. As the robust drawing-in of work in worship gradually declined, various forms of work have been left to their own devices, such that even persons of Christian faith and deep piety have experienced a disconnection of piety from work. Under this condition, certain admonitions towards right moral action may have persisted, against lying to one’s associates for example, but the actual practices and products of our work have been placed behind a curtain and allowed to develop into more sinister forms such that

---

now pious Christian people lead and work for companies which promote forms of work which are grossly immoral without any sense of the dissonance between their work and faith. In the Levitical sense, God has abandoned the Temple.

Yet, Christian Scripture preserves an account of a more demanding worship, and I have argued that this richly textured account might provide the basis for a rehabilitation of the economic capabilities of Christian worship. Based on the account in the previous three chapters, I would suggest that such a rehabilitation might include the following: First, Hebrew offerings begin by relativising the economic status of those who bring an offering. This is realised most profoundly in the burnt offering, where economic pragmatism is resolutely set aside in an act devoted to YHWH. These liturgies suggest that one’s status and work must be, to a certain extent, relativised in worship and offered in a truly exclusive way towards the Creator God. The most obvious way by which this could be implemented in contemporary practice would be to literally incinerate the offerings brought by the people on a given Sunday. Such a practice would be, at least in the United States, an act of civil disobedience as it is a crime to destroy legal tender. In addition to serving as a denial of the sovereignty of mammon, such a practice would also stand as a powerful refutation of the pragmatism that grips many contemporary Christian communities. However, as I have already noted, this is not the only means by which one can “deploy” the burnt offering. One’s choice of vocation, and posture towards the goods of one’s work offer additional areas in which Christians can offer their work as a “spiritual sacrifice.” The celebration of beauty, exposed as one of many basic components of moral work (as I have suggested above in chapter 3, §3 above) might also prove another area where the expense of materials and the time of artisans in an expression of “useless beauty” might de-emphasise money and reorient work towards worship.

The second aspect of worship which I have detailed in chapter 7 stands in tension with the relativising aspect I have noted above. Here, with the cereal offering and shown in greater detail by recourse to the firstfruits offering, one finds a special emphasis on the materiality of offerings. Quality is expected, and by extension, recognised and celebrated. In contrast to the unidirectional movement of one’s work in the burnt offering, with these offerings one finds a bi-directional dynamic in which one’s work is consecrated and returned: the products of work are given to God and they are returned for domestic purposes. In Lev 2, we find the happy priest enjoying a tasty snack, but this expands in Lev 3 where the offering is returned en masse and specific instructions drive one towards a communal feast. Here one finds in offertory
practice an affirmation of the relationship between celebrant and officiant, human and non-human creature, rich and poor, and Israelite and stranger. With this third explicitly social aspect work is inextricably woven into celebration. In tithing one finds a consolidation of all three of these aspects such that the work of the people is similarly “drawn” in to a moral context.

It is my hope that this study might provide a basic context for contemporary worshippers to consider a renewal of offertory practice. In terms of the practices of the church, this offers a promising site for a renewal of this ancient dynamic where worship is drawn into work and brought into a theologically construed moral context. Such a renewal might provide a more robust basis for contemporary Christians to resist those secular theologies which have caused modern worshippers to sustain and collude with modern forms of work and work organisation which destroy humans, other creatures, and put the whole created order at risk. It is my prayer that—as it has in past centuries—Christian work might provide a basis for worship of the Creator in the promotion of convivial work communities, the making of products which promote the flourishing of life and the retrieval of artisanal wisdom and craft traditions.
